Digitized by Google

of brick—is estimated at 5,600*l.* The houses are to be of one and two apartments, and the rents proposed give a gross return of 377*l.* Deducting 25 per cent. on gross rental for taxes, repairs and management, 94*l.* 5*s.*, and 4¾ per cent. on cost, being 3 per cent. for interest and 1¾ for sinking fund, 261*l.* 6*s.* 8*d.*, there remained a surplus of 21*l.* 8*s.* 4*d.*, equal to 6*s.* per square yard for 1,424 yards within the building line.

THE annual report of the Manchester waterworks committee states that the necessity for providing additional storage in the near future is apparent. It is intended to carry out important improvements at the Denton reservoirs, and the preparations for these are now in hand. The hydraulic power supply continues to make progress. The full pressure has been given without intermission all over the system throughout the year. The demand is now almost equal to the full capacity of the plant installed, and arrangements have been made for the erection of an additional pumping station in Water Street, the work on which will shortly be commenced. During the year agreements have been entered into for supplying the power to twenty-three additional premises containing sixty-three machines. These agreements now cover a total of 1,902 machines, which are contained in 506 premises.

ELECTRIC NOTES.

THE Coventry City Council have adopted the recommendation of the electric-lighting committee, that, subject to the sanction of the Local Government Board being obtained to the necessary loan, the committee be authorised to expend 35,000*l.* on extensions to the generating and distributing plant and buildings.

THE Chester Town Council have accepted the tender of Messrs. Robert W. Blackwell & Co., Ltd., of London, for the extension of the city tramways to Boughton, subject to the electrical engineer being satisfied that the poles complied with the specifications. The contract figure would then be 11,955*l.*

THE Stourbridge Council on Monday decided to carry out the proposed transfer of the Council's electric powers to the Shropshire, Worcestershire and Staffordshire Electric Power Company for a sum of 500*l.*, with power to the Council to purchase the order back in fifteen years on terms specified.

A LOCAL GOVERNMENT BOARD inquiry was opened at Stratford town hall by Mr. Ross Hooper into an application by the West Ham Corporation for sanction to borrow 62,300*l.* for the purpose of extending the electricity undertaking, the amount being made up of 35,420*l.* for generating plant and 26,880*l.* for mains, &c. The Inspector said a document had been sent to the Local Government Board when the Board had asked for certain information. That document clearly showed that grants of some thousands of pounds had been made to the Council by the Board for the purpose of purchasing various machines. He now found that the Council was again asking for money to buy machines for which they had already received the cash. He wanted to know where was the necessity to apply twice for the sanction, and also where the money had gone that had been sanctioned? The officials said that at present they could not supply the necessary information. The inquiry was adjourned.

THE old proverb, "It's an ill wind that blows nobody good," has once more been exemplified by the earthquake and fire at San Francisco, says the *Sun*. There seems great probability that the cement trade, which was in a bad way, will once more be "put on its legs." Now that rebuilding has commenced at San Francisco, orders for cement are literally pouring into England, and many of our leading cement manufacturers are shipping loads as fast as possible. A representative saw one of the managers of Messrs. Martin, Earle & Co., Ltd., who are among the largest cement manufacturers in Kent, and was informed that the trade was certainly looking up, and he agreed that the San Francisco disaster would have a material effect in improving the cement trade generally. Other large manufacturers in both Kent and Sussex were of a like opinion, and all admitted that they had in hand large orders from agents acting on behalf of firms in the ruined city.

HAT AND COAT HOOKS.

It is a trite observation that genius is a capacity for taking pains. This is peculiarly true when architectural practice is under discussion. No matter how fair may be the exterior of a building, such beauty cannot compensate to the occupiers for any neglect of details such as interior fittings. The same pains that produce a successful design should be extended to such humble trifles as the hooks for hats and coats. The Empire Hook Company are sanguine

that architects will follow that practice. They manufacture all kinds of wire and wrought-iron hat and coat hooks, japanned or galvanised. Everyone knows the trouble which arises in assemblies from the mixing of the tickets of garments. Confusion is also known in clubs and societies from a like cause. It can be obviated by the numbers which are cast in relief on plates attached to the hooks.

WORKMEN'S COTTAGES.

In the annual report of Dr. Alexander Anderson, medical officer of health for Wortley Rural District Council, attention is drawn to cottages erected outside the Sheffield boundary as an illustration of the best class of cottage of a cheap type. These houses were not only built but sold (presumably at a profit) for 150*l.* They are substantially built in blocks of four, the front walls being of stone with ashlar dressings, and the other walls of brick. They face a street 36 feet in width, and the distance from the back of the house to the outer wall of the plot is 35 feet, there being an open space at the rear free of building of about 500 square feet. Each block has a central passage, 3 feet 6 inches wide, for access to the rear, and built over so as to afford larger bedrooms to the houses adjacent. In the basement is a cellar for coal and provisions, on the ground floor are two rooms each 12 feet square, on the first floor are two bedrooms, and above them an attic bedroom. There is a waste water-closet, but no bath. The space at the rear is occupied with a small garden, and the paths and footways are asphalted. All have gas and water laid on, and in the kitchen are sink, good range and set-pan. They are better finished throughout than the average house built for sale. They let at 5*s.* 9*d.* per week, free of rates, the probable average net rent being 4*s.* 6*d.* Other houses, built in similar style, but provided with bath (hot and cold water) and scullery, have been sold for 178*l.* It cannot, therefore, be said that the problem of erecting substantial sanitary cottages, giving as much accommodation as the cottage which received the first prize at the Letchworth exhibition, and costing less than 150*l.*, presents any appreciable difficulties to the private builder in this district.

The Anderton lift at Northwich, the first constructed, which transferred vessels from the Weaver Navigation to the Trent-Mersey Canal, shortening the journey between the Potteries and the Mersey, was reopened on Monday after a fortnight's stoppage. Over 20,000*l.* are to be expended in converting it into an equilibrium lift on a principle invented by Mr. Saner, engineer to the Weaver Trust. Each caisson will be counterbalanced, and two basins, in which barges and boats can then work independently, rising or falling simultaneously according to traffic requirements, instead of working in contrary directions as at present.

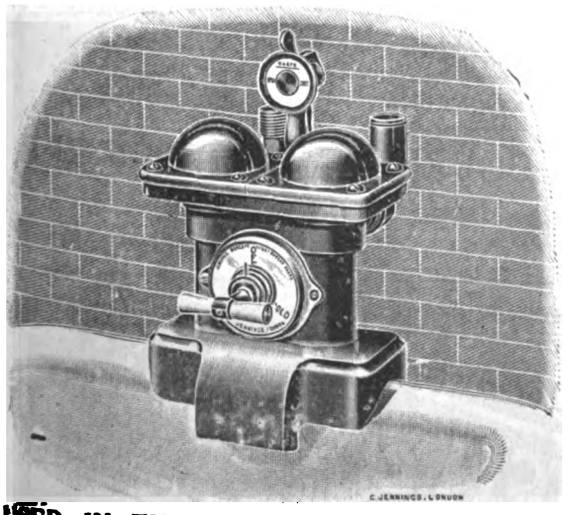
LONDON'S GREAT DANGER.

The warning which Sir Alexander Binnie, late chief engineer to the London County Council, expressed in the following words, "If the present state of things continues there will arise among the teeming millions of London an epidemic which will startle the world," should be considered by every inhabitant of the Metropolis. Most of the dangers ascribed to the use of the water at present supplied can be obviated by the use of proper filters. The "Berkefeld" filter (patent) meets all the conditions required for a precaution against typhoid fever and other diseases. Eminent authorities as Professor Sims Woodhead and Dr. Andrew Wilson speak of this filter in the highest terms. Architects by visiting the show-rooms at 121 Oxford Street, London, W., of the Berkefeld Filter Co., Ltd., can see the filters in operation, and will be able to understand the reasons for their success. They are simple in construction and easily cleaned.



The Berkefeld Filter Co., Ltd., have recently brought on the English market a semi-rotary wing pump, the registered trade mark of which is "Winco." From the fact that the company have in connection with their "Berkefeld" filters sold over 2,000 of the new pumps to H.M.'s Government, it becomes evident that they are easy to use, free from liability to get out of order and capable to perform the work which corresponds with their respective sizes. They have all given complete satisfaction. The company also produce other appliances in connection with hydraulics.

SAN FRANCISCO INSURANCES.

It was announced that the losses incurred in San Francisco would have a serious effect upon the finances of some English companies. The London and Lancashire Fire Insurance Company realise the value of the American field. Out of 300,000*l.* clear underwriting profit during the last twelve months no less than 130,000*l.* was derived from North America. San Francisco has been a favourite place for insurance companies. The rates have almost without exception been maintained at a high figure, and often, when the rest of the United States was poor, the Pacific coast was the one bright spot. The London and Lancashire Company commenced operating there in 1879, and have ever since transacted a large and successful business, yielding steady profits. The surplus on the underwriting in San Francisco for the last fifteen years has been nearly 30 per cent. on the premiums. Business was competed for keenly by rival offices, a fact which was proved by the existence of no less than forty fire brigade stations in the city. Before the fire, according to the chairman, the London and Lancashire reserve stood at the handsome figure of 2,157,735*l.* Half of this has now gone, but the other half is still untouched, and, in addition, there is no damage to the prestige of the company. The capability to withstand a claim of over a million sterling must have a beneficial effect not only in America, but in this country on the minds of insurers, for it is the best testimony that can be offered to the stability of the London and Lancashire Fire Insurance Company and the strictly honest principles by which it is conducted. At the annual meeting there was not one dissentient voice to the proposals of the directors.

JENNINGS' PATENT

DUPLEX BATH VALVES

(For Hot and Cold Water Supply), and
HALF-TURN LEVER WASTE.

Upwards of 5,000 in Use in Various Parts of the Country in Public Baths, Asylums, Hospitals, Infirmaries, Hotels, and Private Houses.

NEW CATALOGUE.

Rumours are often heard about the genuineness of locks and allied fittings which appear as British manufactnres. Mr. James Gibbons proves the origin of what he produces by inviting architects to inspect his extensive works in Wolverhampton. He also supplies photographs of several of his shops which cannot be imaginative creations. The pages of his catalogue suggest the advantages of fixing and respecting limits in manufactures. Locks and door furniture occupy the principal part of the collection. But that does not mean that there is any restriction of variety. Some may think, for example, that door knobs are necessarily confined to a few forms. But we see represented more than 300, each having a distinct character, and some of them being only obtainable at a high price. In finger-plates there is still greater variety, and in door-handles, letter-plates, casement bars, an architect will find something which corresponds with his requirements. Mr. Gibbons also manufactures much else connected with doors, such as spring hinges, automatic panic fittings and museum bolts. As allied subjects there are window fastenings, desk rails, hinge plates (in large size), fanlight openers, window gearings, presentation keys, &c. If the excellence of the forms can be considered a test, the work leaves nothing to be desired.

SPRINKLERS AND FIRES.

The Americans have more faith in the efficacy of sprinklers in cases of fire than is general in England. After the test which was offered in the most dangerous region of the Metropolis there ought to be no more misgivings on the subject. Messrs. Mather & Platt have received a letter from the director of Dr. Jaeger's Sanitary Woollen System Co., Ltd., which is convincing about the efficacy of the Grinnell sprinkler in overcoming what might have been a serious conflagration. Mr. Tomalin writes:—The serious fire at 58 Chiswell Street on the 25th ult. afforded a remarkable demonstration of the value of the drencher system in preventing extended conflagration. The windows (promptly burned out) of these blazing premises are only 18 feet from our windows, and below the former runs a large skylight over part of our ground floor. The entire face of our premises on this side, as on all others, together with the roof and the skylights, is protected by a complete system of your drenchers. We are of opinion that the drenchers saved us from being involved. The glass was cracked by the heat but not broken, and consequently no flames or burning matter were able to enter our windows. It cannot be too widely known that such a precaution, if generally adopted, would make practically impossible an extended conflagration in crowded business quarters.

THE HORSFALL DESTRUCTOR.

It is claimed among other advantages for the Horsfall destructor that economy in the quantity of coal consumed is a certain result. All such questions are difficult to determine with exactitude, but when it is done the figures confirm the experience of the manufacturers. An extract from a report which the borough engineer presented at a recent meeting of the sewage committee of Luton in reference to the consumption of coal at the pumping station gives precise information on the subject. From April 1904 to March 1905 (inclusive) the total number of gallons pumped to an average height of 116.4 feet was 573,072,480, and the amount of coal consumed was 1,438 tons 5 cwts. 2 qrs. From April 1905 to March 1906 (estimated inclusive) the total number of gallons pumped to an average height of 129.7 feet was 597,834,370 and the amount of coal consumed was 1,083 tons 0 cwts. 1 qr. If it takes 1,438 tons of coal to generate sufficient steam to pump 573,072,480 gallons of sewage to an average lift of 116.4 feet, it will take 1,602 tons to lift the same quantity 129.7 feet, assuming the same proportion. If it takes 1,602 tons of coal to generate sufficient steam to pump 573,072,480 gallons of sewage to an average lift of 129.7 feet, it will take 1,671 tons to lift 597,834,370 the same height. Deduct the actual amount of coal consumed (1,083 tons) from this quantity and this will give the amount saved by the destructor, viz. 588 tons, which at 12*s.* 7*d.* per ton equals 369*l.* 19*s.*

CROSLAND HILL STONE, HUDDERSFIELD.

Best Crosland Hill Stone, suitable for all classes of good work, specified by most leading Architects for Church Work and Public Buildings.

Can be supplied in Random Blocks for sawing into Slabs, Panels, Heads, Sills, Mullions, Cornices, or Blocks for Carving, &c.

PICCADILLY WIDENING.

THE improvements committee of the London County Council presented the following report to the meeting on the 1st inst. :—Our attention has been called to the fact that the Royal Insurance Company are about to rebuild their premises at the west corner of St. James's Street and Piccadilly, so that a favourable opportunity is presented of acquiring merely the freehold interest in the premises without having to pay large sums as compensation for leasehold interests or for trade disturbance. The cost of the whole improvement, including an allowance for surveyors' fees, solicitors' costs and the execution of the necessary paving, &c., works, is estimated at 30,450*l*. We are advised that this cost would not be reduced by arranging for the new building to be carried over the footway by means of an arcade, because in the present instance, unlike that of the widening of Piccadilly at the Ritz Hotel, the block of property between St. James's Street and Arlington Street is in the hands of several different owners, and it might therefore be very difficult and costly to obtain the approval of all the owners to the formation of an arcade when the several properties are rebuilt.

The Council on November 26, 1901, agreed to execute the necessary works in connection with the amended proposal put forward by H.M. Office of Works for widening Piccadilly between Hyde Park Corner and Down Street. The Council has recently widened, as county improvements, St. George's Place, Knightsbridge, and Kensington High Street, which form part of the same thoroughfare leading from Hammersmith and Kensington to Piccadilly Circus, the local authority in each case contributing a portion of the cost. The Council is now executing the widening of Piccadilly between the Green Park and Arlington Street, the local authority contributing 4,000*l*., or about one-eleventh of the cost, the widening of Piccadilly near the Circus, the local authority contributing about one-fifth of the cost, and the widening of Piccadilly between St. James's Street and Duke Street, the local authority contributing one-seventh of the cost.

We have no hesitation in strongly advising the Council to seize the present opportunity for carrying out the very necessary widening of a large section of the last remaining narrow portion of the important main thoroughfare connecting Piccadilly Circus with Kensington and Hammersmith. The heavy and increasing traffic is constantly congested, and the present is in every way a most favourable opportunity for effecting the improvement. The Royal Commission on London Traffic in their recently-issued report directed special attention to the congestion of traffic in the portion of the thoroughfare which we suggest should be widened, and from the statistics laid before the Commission it is clear that there are very few parts in the whole of London where the volume or the congestion of traffic is greater. Having regard to the Council's present financial commitments, we should hesitate to advise the Council to incur further expenditure at the present time, but the immediate rebuilding of some of the premises where the widening will be effected leaves us no alternative but to submit the scheme at once.

The traffic along the portion of the thoroughfare in question consists very largely indeed of general through traffic going to and from all parts of London. The widening of the thoroughfare may therefore be considered to be a county improvement, but we think it right that the Westminster City Council should assist by making a contribution towards the cost. In the case of the widening of Piccadilly, immediately to the east of St. James's Street, the Council accepted a contribution of one-seventh of the cost. As the present widening is a continuation of that on the east side of St. James's Street, it is reasonable that the City Council should contribute a similar proportion of the cost, and the City Council has agreed to this.

The present width of the road varies from about only 66 feet to about 70 feet, and this will be increased to a minimum of 80 feet for a distance of about 65 feet. We have sent to the finance committee an estimate of the gross amount required (30,450*l*.). The gross instead of the net amount is given because it will be necessary to incur the expenditure before obtaining payment of the contribution from the City Council. The total contribution from the local authority will reduce the final expenditure of the Council to about 26,100*l*. or less. Special Parliamentary

powers will not be required, because the improvement will be undertaken by the Council under the powers conferred by the Metropolis Management Acts, and we have reason to believe that the City Council will be prepared to assist in effecting the improvement by exercising, if necessary, any statutory powers which it may have for the compulsory acquisition of all or any of the interests in the property required.

We have caused to be hung in the Council chamber a cartoon plan showing by green colour the several widenings of the thoroughfare from Sloane Street to Piccadilly Circus already sanctioned by the Council, namely (1) at Piccadilly, near the Circus, (2) on the east side of St. James's Street, (3) at Walsingham House, (4) at Hyde Park Corner, and (5) at St. George's Place, Knightsbridge; there is also shown on this cartoon by red colour the portion of the improvement now proposed. We have also arranged for a plan, on a larger scale, of the present widening to be hung in the Council chamber. We recommend:—(*a*) That the estimate (No. 5,401) of expenditure on capital account of 30,450*l*., submitted by the finance committee in respect of the widening of Piccadilly to the west of St. James's Street, as shown upon the plan (registered No. 548) of property included in such estimate, be approved; (*b*) that expenditure not exceeding 30,450*l*. be sanctioned in respect of the widening of Piccadilly, as provided in resolution (*a*), the Westminster City Council having agreed to contribute one-seventh of the cost of the improvement; and that the improvements committee be authorised to arrange for the said widening. The finance committee were of opinion that the special circumstances of the case justify the Council in incurring this further expenditure at the present time.

MEASUREMENT OF EARTHWORK.

An action was taken in the American courts by the Bowers Hydraulic Dredging Company for additional compensation from the United States Government upon a contract for dredging in the Christiana river and Wilmington harbour. The company agreed to dredge to a depth of 21 feet. The contract contained the following provision in the contract deed:—

"43. The amount of material removed will be paid for by the cubic yard measured in place, and shall be determined by surveys made before dredging is commenced and after it is completed. All surveys and measurements are to be made under the direction of the engineer in charge by persons employed by him for that purpose. The decision of the engineer in charge as to the amount of material excavated and removed, as well as to its location and deposit, shall be final and without appeal on the part of the contractor."

The question early arose in relation to the work required by this contract, whether the Government would pay for material which fell into the cut during the excavation from outside the designated lines. The company maintained that it should be paid for such excavation, while the Government insisted that the provisions of paragraph 43 forbade any such payment. The claimant protested upon each payment and thus preserved his rights intact.

The question was taken up upon its merits by the Court of Claims, and decided in favour of the Government. The Court in effect said that paragraph 43 contemplated a survey before dredging and another survey after dredging as the only mode of ascertaining the amount of material removed. The first survey would show the amount of material within the designated limits to be removed. The final survey would show that the excavation had proceeded to the depth required. The difference as ascertained between the condition as shown before the work began and after the required depth, limited to the location by stakes and ranges within which the channel was to be excavated, the Court says, is the amount for which payment is required by the contract.

The final conclusion of the Court was substantially stated in the following extract:—

"Keeping in mind that the amount of material to be paid for was to be determined within the designated lines by means of surveys made before dredging commenced, and verified within those lines after the dredging was completed, makes it clear that the measurements made were not to include any material outside of the designated lines. It necessarily follows that the material falling within the designated lines during the progress of the work could not have been measured in place by the surveys so authorised by the contract to be made."

SUITABLE FOR PRESENTATION.

NOW READY,

PROUT'S CONTINENTAL SKETCHES

Proofs on Thick Plate Paper in Handsome Portfolio, Cloth, Gilt Lettered, Size 21 inches by 15 inches, Price 42s. Net.

The work consists of 75 Plates, and was originally published at 30 Guineas. The Plates are the full size of Prout's Drawings, and are an exact reproduction by the

PERMANENT INK PHOTO PROCESS.

Mr. RUSKIN, Author of "The Seven Lamps of Architecture," &c., &c., referring to these Drawings, says :—

"Prout ransacked every corner of France, Germany, the Netherlands and Italy."

"Prout was, and he remains, the only one of our artists who entirely showed Turner's sense of magnitude; and of all forms of artistic susceptibility reverent perception of true magnitude is the rarest.

"Numerous as have been his imitators, extended as his influence, there has yet appeared nothing at all to equal him; there is no stone drawing, no vitality of architecture, like Prout's."

"His 'On the Grand Canal, Venice,' is an Arabian enchantment, his 'Street in Nuremberg' is a German fairy tale."

"Prout drew every lovely street in Europe."

"I have," says Mr. Ruskin, "both in my earlier books and in my lectures at Oxford, spoken of the sketches of Prout with reverence and enthusiasm."

"The sharpest photograph is not half so natural."

"No architect, however accurate in his measurements—no artist, however sensitive in his admiration—ever gave the proportion and grace of Gothic spires and towers with the loving fidelity that Prout did. This is much to say; and therefore I say it again deliberately, there are no existing true records of the real effect of Gothic towers and spires—except only Prout's."

THE PORTFOLIO INCLUDES THE FOLLOWING WELL-KNOWN PICTURES:—

Ask your Mathematical Instrument Maker, Stationer, or Ironmonger, or apply to

E. W. WULFERT & CO.,
13 Soho Square, Oxford Street, London, W.

QUICK AND EASY.

DOULTON'S "IGNIS" BATH HEATER

IN COPPER.

No. 1497.

Bath heaters are of the greatest benefit in a house even though there is a system of hot-water circulation. The use of gas for cooking, &c., through a great part of the year, saves the ordinary firing and thus stops the hot-water supply. In such cases a bath heater is most serviceable, as a hot bath can be had at any time, at a minimum cost and without any trouble.

To meet this special demand Messrs. Doulton have made a heater that is both cheap in price and lasting in wear.

All parts are made in stout hardened copper, tinned inside.

The water in no case comes into contact with the gas.

Ordinary burners are used for heating instead of Bunsen's or atmospheric.

Cold water is raised 55° in passing through the heater, but water of a higher temperature can be obtained if the quantity is reduced.

The flow of water should be regulated by a stop cock, so as to give the amount of water required and no more,

PRICES.

No. 1497.	Polished copper heater to give 1½ gallons per minute	£4 15 0
No. 1497A.	Polished copper heater to give 2 gallons per minute	5 10 0

HALL'S Sanitary Washable DISTEMPER

The Real Sanitary Water Paint.

Hall's Distemper is the real Washable Distemper. It was one of the first invented, and is to-day better than ever, because the Manufacturers have, by reason of many years of scientific and practical tests, continually improved its manufacture until perfection has been attained.

Hall's Distemper is made in two qualities—the inside quality is specially for interior wall decoration, the outside quality being most suitable for all other purposes, both inside and out, whether on wood, stone, brickwork, or any kind of building material.

Its utility for Farm and Estate Buildings, such as dairy and tool-sheds, kennels, barns, shooting boxes, and temporary buildings of all sorts, is remarkable.

Full particulars of Hall's Distemper, in the form of a beautiful booklet, entitled "Modern Development in House Decoration," will be sent post free on application to the Sole Proprietors and Manufacturers,

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 P.M. *on Thursdays.*

A Local Government Board inquiry into an application by the Bucklow Rural District Council for authority to borrow 10,519*l.* to complete the Dunham Massey sewer was held at Dunham Massey on May 7. The clerk to the Council explained that 16,689*l.* had already been borrowed and 14,622*l.* remained to be paid off.

The Edinburgh Corporation have adopted the report of the parks committee which recommended that the use of Saughton Park and grounds be granted as a site for the Scottish National Exhibition, proposed to be held in 1908. It was estimated by the promoters of the exhibition that the cost of altering the Saughton Park for their purposes would be 35,000*l.*, of which it was considered 8,000*l.* would be to the permanent value of the city. The committee suggested that there should be a guarantee fund of at least 25,000*l.* subscribed within six months, and that the promoters should erect the buildings and carry out the works. Whether the exhibition was a financial success or not, the Corporation should be entitled to require that such buildings as they chose should be left entire and free of charge at the close of the exhibition, the promoters of the exhibition to remove at their own expense the remainder of the buildings and restore the ground to the satisfaction of the Corporation authorities, and in the event of its being a financial success 2,000*l.* should be paid to the Corporation out of the surplus. The promoters should not be allowed to retain possession of any part of the ground beyond May 1, 1909, and during their occupancy the promoters should maintain the surface of the ground throughout.

WALMER—*continued*

For the erection of a bungalow on Walmer beach. Messrs. Fry & Miller, architects, Dover.

Turner £690 0 0

VARIETIES.

A sum of 25,000*l.* is to be devoted to the relief of the rates from the profits of the Liverpool Corporation tramways during the past year.

The Birmingham health sub-committee have appointed four additional lady health visitors. This brings the staff up to sixteen.

The King's Norton education committee have approved designs for new schools at Selly Oak, and Mr. J. P. Osborne, of Birmingham, was appointed architect.

The Legislative Council of the Straits Settlements have accepted the tender of a British firm for the Singapore harbour improvement works for a sum of 1,030,693*l.*

The Drapers' Company have sent a cheque for 10,000*l.* to the fund for the removal of King's College Hospital to South London.

The Failsworth District Council on Tuesday decided to make application to the Local Government Board for permission to borrow 2,966*l.* for filters at the sewage disposal works.

The Warwickshire County Council are about to appoint a woman health visitor. The remuneration is 35*s.* per week, with necessary travelling expenses, a uniform and a bicycle.

The Whitley Bay Council have decided to make a further appeal to the Duke of Northumberland to stop the removal of sand from the seashore, owing to its facilitating coast erosion.

The contractors for the construction of the joint dock at Hull, Messrs. S. Pearson, of London, are removing their plant from the new dock at Liverpool to Hull. During the next few weeks a thousand tons of plant will be on the site.

The Tamworth Town Council have resolved to make application to the Local Government Board for their sanction to borrow 20,000*l.* for works of sewerage and disposal of the sewage of the borough.

The Stretford Council have received sanction from the Local Government Board to obtain a loan of 28,860*l.* for the purposes of laying out land as a recreation ground at Gorse Hill and improvements at Victoria Park.

A member of the Glasgow Corporation has given notice of motion to the effect that a contractor who knowingly violates the conditions of his contract to any material extent should be liable to the forfeiture of a sum not exceeding 25 per cent. of the contract price in respect of such violation.

His Majesty's Prison Commissioners for Scotland are, it is reported, considering the advisability of erecting a large new prison in the vicinity of Greenock for the counties of Renfrew, Bute and Argyle. The present prison at Greenock has become too small.

The London County Council's expenditure last year was 9,237,288*l.* and the income 9,277,470*l.* The deficit on the Council's steamboats amounted to 51,000*l.* Next year's expenditure, including steamboat deficit, is estimated at 10,100,000*l.* and the income 9,800,000*l.*

The Manchester City Council have rescinded the resolution as to the allowances to owners of property for the demolition of insanitary buildings. This decision puts an end to the payment of 15*l.* per house taken down, and enables the committee to reduce their estimates by 6,000*l.*, a sum nearly equal to a halfpenny rate.

The Newquay District Council recently made application to borrow 1,550*l.* for the eastern drainage scheme. The Local Government Board have in reply stated they are not satisfied that the best means of drainage has been considered, therefore they cannot comply with the Council's request.

The Brighton Corporation have accepted the principle of a minimum wage for its employés. Henceforward none will receive a smaller remuneration than 24*s.* a week. Overtime is to be abolished, so that the actual earnings will not in every case be increased for unskilled labourers, but additional men will have to be employed.

The highways committee of the Gloucestershire County Council last week considered an application, made on behalf of the promoters, for a subscription of 20,000*l.*

towards the Cirencester and Fairford Light Railway, on which they had been asked to report to the Council. After discussion it was decided to defer the matter for three months.

THE Lincoln City Council on Monday decided (1) to agree to the proposed alterations at the municipal technical school being carried out in accordance with the original plans; (2) to authorise the education committee to proceed with the work; and (3) to authorise the necessary steps to be taken to obtain the sanction of the Local Government Board for the raising of a loan for the 7,000*l.* required.

MR. G. H. HILL, engineer to the Manchester Waterworks Department, has presented a report to the waterworks committee on the quantity of water which the city will require in future. He thinks that the changes in the sanitary system throughout the municipal area now going on will call for from two to three million gallons of water per day more than is at present used.

A COLONY of rats recently undermined the tramway in Links Street, near Ramsay Road, Kirkcaldy, and the street had to be pulled up at the spot. The rats had engineered a tunnel below the pavement and half across the street, removing the earth from below the concrete that supports the rails, so that it hung on nothing. The sand scooped out they removed to an adjoining cellar. In the tunnel the workmen found a nest with a litter of young rats.

THE Dublin Corporation has passed the following resolution:—"That the Lorain Steel Company having refused to enter into the usual Corporation contract for carrying out their tender of 265*l.* 12*s.* for the supply of steel rails to the cleansing committee, the next lowest tender, that of Messrs. Edgar Allen & Co., of Sheffield, of 350*l.*, be and is hereby accepted, and that the city seal be affixed to the contract with them."

AT the Holborn end of Southampton Row, London, at noon on Tuesday, two empty skips which were being hoisted by one of the lofty cranes employed in the construction of the Central School of Arts and Crafts fell on top of a motor omnibus which was passing below. Three of the outside passengers—two men and a boy—were slightly cut about the face and were taken to the hospital, but it was not considered necessary to detain them.

AN influential movement is on foot in Birmingham for the provision of open spaces and playgrounds in the crowded parts of the city. The medical officer of health in a report points out that if the public parks and open spaces were together taken into account in the large manufacturing towns in this country, Birmingham stands at the bottom of the list when the number of persons per acre is considered. The actual number is 1,026. Newcastle has 206 per acre.

THE Newcastle Town Council have decided to abandon the picturesque ceremony known as "Barge Day." For 600 years the Corporation, who claimed the right to the foreshore of the Tyne, have carried out a survey of the river yearly till 1850, and every fifth year since the Tyne Commission took over the charge of the river. The excursion was made in a decorated barge. The Law Courts, however, decided in 1903 that the foreshore is now vested in the Crown.

SIR HENRY CAMPBELL-BANNERMAN informed Mr. O'Grady in the House of Commons on Monday that it was not thought necessary to appoint a committee for the purpose of revising and bringing up to date the fair-wage clause in Government contracts. There might, no doubt, be isolated instances in which the evils which the fair-wage clause was designed to prevent still arose in connection with Government contracts, but there was every reason to believe that the clause had been a very effectual instrument against sweating, and that cases of evasion rarely passed undetected. The departments concerned had taken the necessary steps to secure the equitable operation of the clause.

THE South Shields Town Council decided, after an animated discussion, to support the education authority in accepting a Shields tender for the erection of new schools, although a Doncaster firm's (Messrs. Arnold & Sons) tender was 270*l.* less. It was argued that local contractors should be given an opportunity, seeing that the Corporation had already let contracts to the extent of 100,000*l.* to outside firms, when there was so much distress among the joiners. An amendment that the tender of Messrs. Arnold & Sons should be accepted, as it was the lowest, was rejected by a large majority.

MESSRS. HAWKSHAW & DOBSON, of London, have been appointed to act as consulting engineers to the Belfast Harbour Board in relation to all matters in connection with the new graving dock and other collateral works at present in course of construction on the county Down side of the harbour. A deputation from the Belfast Trades Council asked the Commissioners to take the work of constructing the dock out of the hands of the contractors, Messrs. Harland & Wolff, and put on a night and day staff of their own until the work was completed. Sir Daniel Dixon said if that were done it would mean a loss to Belfast of 100,000*l.*

JUDGE INGHAM and a jury heard a case at the Coventry County Court on Tuesday, wherein a lady claimed from a builder 50*l.* as damages for injuries. The case for the plaintiff was that defendant was engaged on works, and a number of flagstones or granite setts being taken up, the place was left unfenced. The plaintiff on November 24 fell into a hole caused by the taking up of the setts and flagstones and injured her knee, and had been unable to do her usual work as the result of the accident. The case for the defendant was that after the flagstones had been taken up they were stolen, as also were some planks used to make the place level with the pavement. The jury found for the plaintiff, and assessed the damages at 22*l.* 10*s.*

ABOUT thirty plumbers from various parts of London and the country attended at King's College on Saturday for examination in the principles and practice of plumbers' work for registration by the Plumbers' Company. The practical examinations included tests in lead bossing and joint-wiping as required for best sanitary work, and the questions were on the subjects of house sanitation, drainage, ventilation and the connection of pure water to domestic dwellings. The examiners were Messrs. J. Johnson and C. Rogerson (master plumbers) and E. T. Muggridge and F. R. Wyatt (operative plumbers). Twelve candidates succeeded in passing the examinations, and were enrolled on the register of qualified plumbers.

MESSRS. J. & P. COATS, LTD., thread manufacturers, have decided not to proceed with the erection of a large spooling mill at Ferguslie, Paisley, plans for which were passed by the Paisley Dean of Guild Court a few days ago, and orders have been given to stop the excavating work already begun. It has, it is also, understood, been decided not to go on with the proposed addition to the spinning mill at Paisley, the plans for which had been practically completed. The total expenditure for these extensions would have exceeded 200,000*l.*, and they would have given employment to a large number of hands. It is stated that interference between the workers and the company has been the cause of the directors deciding to abandon the idea of an extension in Paisley, and instead to consider the advisability of adding to their mills abroad.

THE Association of Municipal Corporations will hold their annual meeting on the 17th inst. at the Mansion House, London. A representative from Blackpool will call attention to the practice of the Local Government Board, and in some cases of Parliament, granting short periods for the repayment of loans for the construction of permanent works for the supply of water and for sanitary purposes, and also of permanent buildings for education purposes. A representative from Halifax will propose an amendment of the Public Health Act of 1875, so as to allow local authorities a term of sixty years at the least for the repayment of moneys borrowed for the purchase of land for waterworks and the construction of waterworks, and forty years for pipes, machinery and other appliances for such waterworks.

THE Worshipful Company of Makers of Playing Cards offer "the Company's prize" of 15*l.* 15*s.* for the best design for the backs of playing cards, illustrating the subject of "the visit of the Prince and Princess of Wales to India or their return to this country." The arms of the Company or its shield and crest must be represented in one corner of

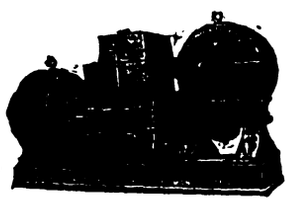
the design in proper colours. The "H. D. Phillips prize" of 10*l.* 10*s.* is also offered by the Company for the best design on any other subject than that mentioned above, or of any pattern at the choice of the competitor, including in it the Company's name and coat of arms and the year of issue. Full particulars as to the competition, with photograph of designs already produced by the Company, may be obtained, on payment of 1*s.*, from Mr. W. Hayes, the clerk of the Company, Guildhall, London, E.C.

AT the Thames police court, London, on Tuesday, a firm of rag sorters, of Shadwell, being summoned by the Home Office for not taking proper measures for securing and maintaining a reasonable temperature in their warehouse, Mr. Bellhouse, inspector of factories, said the section of the Act required that a reasonable temperature must be maintained, but there was no actual definition as to what this was. He submitted that it was 60 degrees. An assistant inspector of factories stated that on March 22 he visited the defendants' warehouse. It was about midday, and the temperature there at that time was 48 degrees. There was a stove, but it was not lighted. Dr. Legge, medical inspector of factories, said that if the temperature was less than 60 degrees people were liable to chilblains, rheumatism and tonsilitis. Mr. Mead, the magistrate, imposed a fine of 3*l.* and 6*s.* costs.

ELECTRIC NOTES.

THE Carlisle electricity committee have resolved on the purchase of additional plant, at an estimated cost of 5,500*l.*, required in order to meet the increasing demand in the city for electric current for lighting purposes. The engineer was instructed to advertise for tenders for the plant required and also for extension works at the station, and the town clerk was also instructed to apply to the Local Government Board for leave to borrow the 5,500*l.*

THE Cheltenham Town Council at their next meeting will consider the following resolution:—"That it is desirable in the interests of the general body of ratepayers to consider the advisability of selling the electric lighting undertaking of the borough of Cheltenham to some persons or company upon terms that shall reimburse the said borough the full amount of capital moneys incurred in the said undertaking up to the present time, and also fully safeguard the nature and price of supply both for public and private lighting, thereby obviating further capital expenditure by the Council of the said borough, and the possible risks and disadvantages attendant upon the management and control of the said undertaking by the municipality."



A MEETING of the Royal Scottish Society of Arts was held in the Heriot-Watt College, Edinburgh, on Monday. Professor Stanfield and Professor Bailey read papers describing the new engines and alternate current machinery of the college, which include a steam turbine, oil-engine, suction gas plant, petrol-engine, polyphase dynamos, rotary converters, transformers, induction motors, &c. Professor Stanfield explained that the plant was used simply for experimental purposes. They were hampered at present for room, and he hoped to see the vacant ground at the back of the college occupied in the not distant future as an engineering laboratory. Professor Bailey described the electrical plant in detail. The papers were followed by a demonstration of the machinery.

THE Dartford Urban Council have decided to apply for Parliamentary powers to extend their tramways from Horn Cross to Swanscombe, so as to meet the Gravesend tramways system. When this extension of two miles of route is made the tramways will be continuous from Gravesend to London. With existing and proposed lines the idea of a journey by tramcar from Maidstone to London is not a far off possibility, as of the whole of the distance only the six miles between Denton and Chatham is without a scheme in actual contemplation. The Dartford Council, says the *South-Eastern Gazette*, adopted the "construction lease" principle for their tramways already in operation, the Council raising the capital and leasing the line to the constructors in consideration of the payment of the capital charges and 20 per cent. of the surplus profits to the Council. The lessees are tied to the Council for their current, and such matters as fares and other details have to be mutually agreed upon, with the condition that in case of dispute the arbitration of the Board of Trade is to be sought. The arrangement has been to the satisfaction of the Council up to the present.

ELECTRIC LIFTS.

A. SMITH & STEVENS.

If you are looking for the Cheapest Machine with heavy accounts for current and repairs, we cannot supply you. But if you require a Sound Machine, saving you about £25 a year on current and repairs, our Lift will suit you. The extra outlay will come back in Six Months.

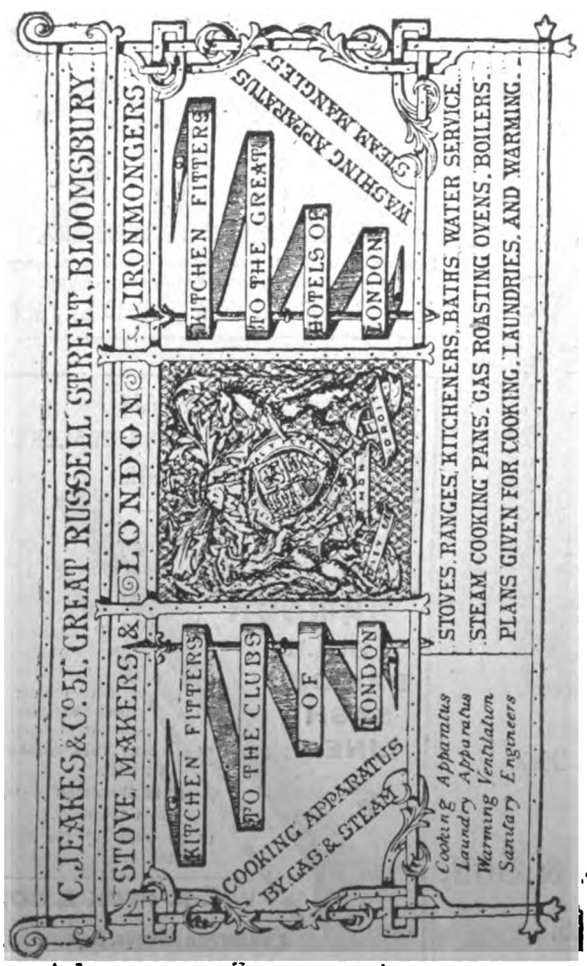
TRADE NOTE.

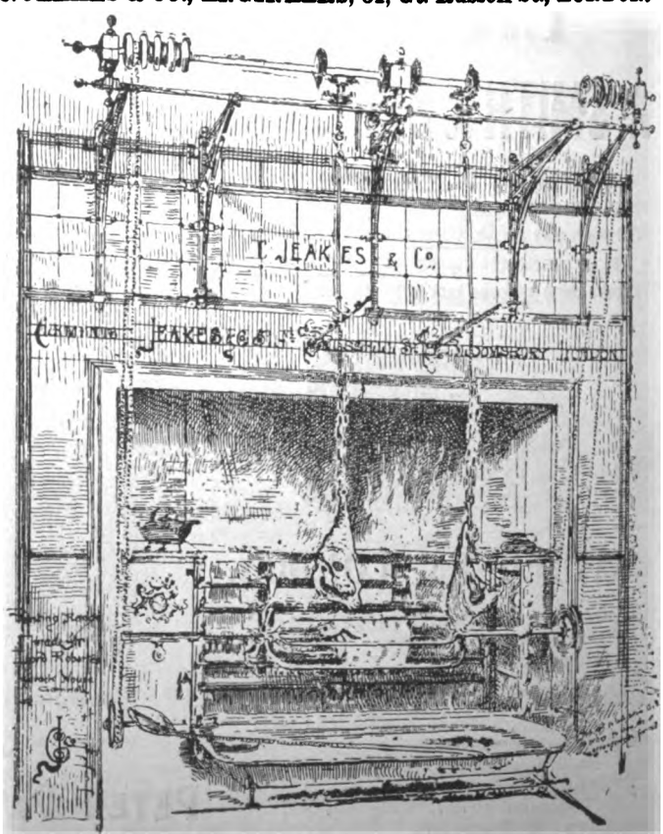
The business hitherto carried on by Mr. H. G. Carpmael as managing partner of Messrs. Allott, Jones & Notley, Westminster, is amalgamated with Norton & Gregory, Ltd. Mr. Carpmael has joined the board of directors.

THE ROTOMETER.

A striking novelty in measuring instruments with the above name is being placed upon the market, which should interest architects and all engaged in building and the allied trades. In cases where the use of a foot rule or tape measure is not convenient "The Rotometer" is specially serviceable, and may soon prove indispensable in measuring floors, ceilings, the upper parts of doors and windows, &c., to mention but a few of the uses for which it is adapted. Stooping and the necessity for steps are avoided. From



the accompanying illustration it will be seen that it is constructed on the principle of the cyclometer, and is wheeled along the space to be measured, registering the distance by means of two wheels and a dial, on which is shown the length in yards, feet and inches. It has a capacity from 1-16th inch to 20 yards. A ferrule holder enables it to be easily fixed to a stick or umbrella. "The Rotometer" is patented in every country, the sole agents being Messrs. E. W. Wulfert & Co., 13 Soho Square, W.



KAROOME PUMPS.

In most cases the dimensions of a pumping engine are as serious a consideration as its capacity. We can have a simple type "Karoome" feed pumping engine, as produced by the Pulsometer Engineering Company, Ltd., with a capacity from 1,800 to 2,500 gallons per hour on a floor space measuring 1 feet 11 inches by 2 feet 1 inch. The shipping measurement is 2 feet 4 inches by 2 feet 2 inches by 5 feet 6 inches. But another pump for which a floor space of 3 feet 2 inches by 3 feet 5 inches will suffice, and the shipping measurement is 3 feet 9 inches by 3 feet 6 inches by 7 feet 3 inches, will have a capacity from 12,000 to 16,000 gallons an hour; the net weight of the latter is only 32 cwts., and of the former 7 cwts. Another advantage is that all parts of the "Karoome" pumps, whether large or small, bear corresponding numbers: 154, for instance, is always a discharge valve spring; 70 is always a pump rod, and so on. It is therefore not necessary to lay in a stock of spare gear, for it is sufficient to write or wire to the Pulsometer Company in order to get what is required without delay. A pump barrel or liner cannot always be produced, but they are as easily obtained from the company as the smallest tappet-rod. All parts of the pumps are readily get-at-able, and they are used not only in battleships but in electric supply works, power stations, &c. A family likeness exists between each of them. An engineer who has worked one will have no difficulty in dealing with another "Karoome" as soon as it comes into his charge.

The House of Commons Standing Committee on Law resumed consideration of the Workmen's Compensation Bill, Sir James Woodhouse presiding, on Tuesday. On the first clause, which declares the employer's liability for injury to his workmen, the discussion was continued of an amendment proposed by Mr. Gill at the last sitting, reducing from seven days to three the minimum period of disablement for which a workman might claim compensation. On a division the amendment was carried against the Government by thirty votes to twenty-one.

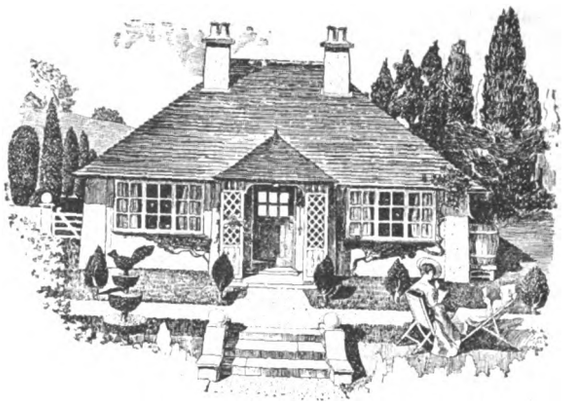
NEW CATALOGUE.



THE Wall Paper Manufacturers, Ltd., announce that they would be glad to have catalogues of "Old Ford" Lincrusta, because it has been found necessary to renumber the designs and to revise the prices. The new catalogue contains dadoes, friezes, borders, fillings, ceilings, door panels and plaques. They have also some very ornamental picture rails in unstained wood. Many of the plaques are of figure subjects, and the difficulties in attaining such forms have been ably overcome; they well sustain criticism. Four of them are taken from the famous fountain by Jean Goujon. A variety of Lincrusta called "Cameoid" allows of the patterns being produced in high relief, and greater scope is given in that way for artistic effect. We use the word "artistic" advisedly, for no other is more applicable to a collection in which so many able designers have co-operated.

REMOVAL OF PAINT.

PAINT-REMOVERS necessarily owe their efficacy to chemical action. There has to be dissolution and combination. One result often takes place, which is not advantageous, viz. that the solvent does not confine its action to the layer or layers of paint which it is desirable to remove. The wood or other material covered by the paint may suffer, and an uneven surface is created which cannot be easily remedied. Holzapfel's "Pintoff" is a paint and varnish remover which performs the work for which it was made, and does not go beyond it. It may be compared to a thin paste, and is easily applied with a brush. In ordinary cases the adherence of the paint is subdued in about a quarter of an hour, and can be removed in large flakes without any difficulty. Mouldings, carved work, or, in fact, any surface which a brush can touch is as easily operated on as a large plane. The surface of the wood can then be rubbed with methylated spirits, turpentine, or even water, and is afterwards ready to be again painted. The economy of the material is obvious, for it supersedes the tedious, offensive and dangerous practice of removal by burning. The paint is produced in large quantities by the Holzapfel's Compositions Company, Ltd., at Felling, near Newcastle-on-Tyne. So cleanly and effective a means of dealing with an everyday difficulty deserves to be known to all builders and contractors.

MODEL COTTAGES.

WEEK-END cottages is a phrase that might possibly lead people to expect something startlingly original, such as collapsible structures with collapsible furniture, so made that they might be stowed on a railway truck and conveyed to any part of the kingdom which the owner fancied for a Saturday-to-Monday change, and sent somehere else as soon as the attractions of the place are exhausted. Or the imagination might conjure up pictures of a structure of which the framework alone is fixed, while the envelope covering is removed at will and with the furniture stowed away under lock and key, this advantage being specially useful in winter time when the cottage is not required. But such modern developments are yet to come. The week-end cottage of to-day is in principle but slightly different from the cottages which were erected some hundred years ago. Messrs. Oetzmann & Co. evidently doubted whether the public realise how eminently satisfactory such a cottage can become. Therefore they have erected a couple in their show-rooms, exact replicas of which it is in the power of every visitor to obtain for about 200*l.* each. Mr. W. Henry White, architect, has prepared the plans and specifications on which the model was erected, and of which copies may be obtained by intending investors. It is a bungalow with a 30-feet frontage and a depth of 21 feet, containing a living-room, a principal bedroom, a smaller bedroom and a kitchen, which opens into the servant's bedroom. Detached from the house are an earth closet, a coal shed and a large shed.

The exterior walls are constructed of 9-inch brickwork coated with cement rough-cast on the outside; the partition walls are 4½ inch brick, whilst the roof is covered with red tiles, thus making a warm and weatherproof dwelling of artistic appearance. All the floors are laid solid on concrete foundations, thus rendering them damp and vermin proof. The walls are coloured with distemper, with a frieze and picture rail. One cottage has a porch and entrance lobby in the centre; the other has the entrance door leading directly into the living room, which is consequently larger. The sanitation and ventilation are said to be perfect. It is indispensable that the plans supplied by Mr. White should be exactly followed if the cost is not to be exceeded. Messrs. Oetzmann greatly increase the charm of the cottages by furnishing them completely, in one case at a cost of 45*l.* and in the other at 60*l.* The price of each article is marked. The exhibition is both novel and interesting. It should render still more widespread the healthful, stimulating practice of spending week-ends in the country, but on somewhat new lines. It will no longer be necessary to put up with the inconveniences of apartments, or even the minor ones of inns and hotels. The annual rate of interest payable on a loan necessary for the erection of such a cottage must be less than the prices paid for a very few weeks' lodging. The cottages seem to offer a remunerative investment. But as plots of land can be obtained cheaply, a townsman can become a proprietor and possess a house by a very modest outlay.

Digitized by Google

year 1905 there has been a considerable increase in the subdivision of dwelling-houses during the past year. There is a notable tendency on the part of some owners of property to subdivide into small houses of one or more apartments. While the increased rental explains the custom, the report states that the effect is highly unsatisfactory from a sanitary point of view. Examples are given. An aggravated case was found in Lothian Street, where thirty-five houses have been converted into 107 houses. Nevertheless, cases of overcrowding were much less frequent than in former years. That is ascribed to the strictness of the supervision and to the larger number of small houses available. During the year there were 182 cases of overcrowding, and in 118 cases the houses consisted of only one apartment. Moreover, there is a growing tendency on the part of the men who use the lodging-houses to take advantage of the larger class of buildings. That is regarded as satisfactory from a sanitary point of view, as it permits of the older, smaller and less satisfactory houses being closed, and of encouragement being given to the maintenance of the high sanitary standard at which the larger and more recently constructed houses are kept.

NOTTINGHAM ALABASTER.

Writing of the alabaster trade, now centred in and about Tutbury, in Staffordshire, and at Chellaston, in the neighbouring county of Derby, is writing of the past, so far as Nottingham is concerned, for the raw material now rarely enters the town. So late as half a century ago, says William Stevenson in the *Nottinghamshire Guardian*, it might be seen as an article of consumption on the waterway, and landing at the Canal Street and Leen Side wharves, thence to be reduced into plaster for the purpose of making the then popular plaster floors, when wood was less a luxury than it is to-day. That this now lost trade of calcining gypsum has an interesting history is proved by the evidence of our old houses, in which plaster, more or less refined, was used for walls, floors and ceilings. It need scarcely be said that the mining of gypsum and alabaster is one and the same thing; they are interchangeable terms

Alabaster, or gypsum, otherwise amorphous sulphate of lime, is found naturally in the upper strata of the kuyper marls of the new red sandstone series, that play such a conspicuous part in South Derbyshire and Nottinghamshire.. In our county it lies to the south immediately below the lias, and is present at Gotham, Orston, Cotham, Newark and Gainsborough, the neighbourhood of the former being the old home of the Nottingham supply. Outside the county this class of stone was, and is, obtained from Chellaston, four miles south-south-east of Derby, and thirteen miles south-west from Nottingham. The fragmentary history of the old trade in Nottingham is mostly associated with law cases in the local courts for the recovery of accounts for finished articles, but with one exception, which refers to Chellaston, they are silent regarding the source of supply. In the eighteenth century a celebrated quarry of block alabaster was being worked to supply the so-called marble columns for Mr. Pelham's mausoleum at Brocklesby, Lincolnshire, and for Kedleston Hall, Derbyshire, the seat of Lord Scarsdale. Its site was "Red Hill, at the junction of Trent and Soar" (Notts), which we identify as the neighbourhood of Gotham. Matthew Henry Barker, in his "Walks Round Nottingham," published in the early part of the nineteenth century, says "The village (Gotham) stands upon a rock of alabaster." We have evidence all but conclusive that this was the source from which the alabaster men of Nottingham drew their raw material. This old, artistic staple of the town is now engaging the attention of learned men far beyond the radius of the town or county, notably Mr. W. H. St. John Hope, secretary of the Society of Antiquaries, who has lectured upon it in the Exchange Rooms, Nottingham, and written learned articles in the leading journals of the day. As the old source of the raw material is only once alluded to, and that as Chellaston, out of the county, we called Mr. Hope's attention to the above sources of somewhat later times, which drew from him the following note:—"London: August 21, 1905. Dear sir,—Thank you for your useful notes on alabaster quarries. It would be much to the point if they could be shown to have been worked in the fifteenth and sixteenth centuries, but the Nottingham Records do not throw any light on the point, they only mention alabaster from Chellaston."

This truly is the present state of our knowledge on the

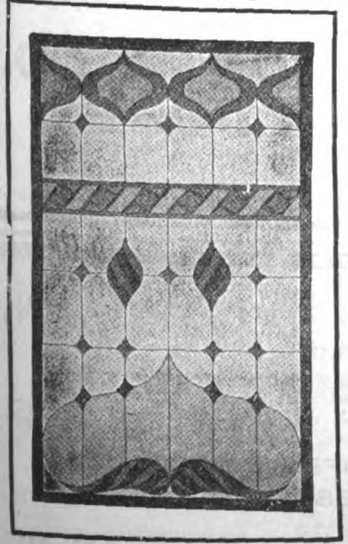
subject. As to the Nottingham source of the raw material of alabaster, the evidence is confined to one cartload, which formed the subject of a trial in the local court, June 23, 1506. It appears that William Walsh, of Chellaston, carried, or brought, a cartload of alabaster stone to Nottingham, and subsequently sued John Nicholson, of Nottingham, stainer—which means a painter and gilder of alabaster work—for carriage, 1s. 6d. He could not prove his case, and was non-suited in consequence. This cannot be taken to imply that the whole of the town supply for centuries came from the distant Derbyshire quarries, and none from the nearer source in our own county. The details of the case are given in "The Records of the Borough," vol. iii. page 188.

Peter Maceon, or Mason (an alabaster mason), was an important worker of alabaster in the town in and before 1371. At this date he was paid a balance of 300 marks, a large amount of money, for an altar-piece of alabaster placed upon the high altar of the King's Chapel of St. George at Windsor. This would be an order given by Edward III., possibly some years before. From this it is fair to presume that the trade in alabaster had taken root and flourished in Nottingham when that material became fashionable in ecclesiastical sculpture in the first half of that century. John Lingard, or Lyngard, is recorded as an "imagemaker and alblastyrman"—1375 to 1403. The difference in the surname arises from two distinct entries having reached us. Nicholas Goodman, aleblasterer, 1478-9; Nicholas Hill, or Hylle, alablasterman, imagemaker, painter and gilder, 1491-9; John Spencer, imagemaker, 1494-5. He appears to have died in the latter year, and his relatives a few months after were falling out about his property, amongst which were divers altar-pieces and other images of alabaster in his shop or studio valued at 20s. Edward Hilton, imagemaker, 1488-1503; Walter Hylton, ditto, 1496; Thomas Hill, or Hylle, alablasterman and imagemaker, 1499-1502; John Collinson, imagemaker; and John Nicholson, stainer (painter), 1506. (This was the townsman sued by the Chellaston carter.) Richard Starkey, alabasterman, 1529. At this date the trade name was correctly recorded; previously it was confused with alblastere—a cross-bowman.



On this detail our information is not clear. Mr. W. H. St. John Hope, in his discourse on alabaster in the Exchange Rooms, Nottingham, July 23, 1901, said:—He thought for the present it might be assumed that the majority of the early alabaster monuments of the country were worked at Chellaston, in Derbyshire, the site of the principal Mediæval alabaster quarries, but that the smaller statues and panels were the work of the "Alabaster men" of Nottingham and York. Their works were well known, not only in their native land, but also on the Continent. A class of alabaster carvings which could with great probability be attributed to Nottingham workmen were St. John's Heads, several examples of which were exhibited in illustration of the paper, one of them, kindly lent by the curator of the Leicester Museum, being in its original painted oak case. Other specimens of alabaster work were shown, including three fine figures found on the site of Flawford Church, near Nottingham (in 1779). The lecturer, as an illustration of the alabaster industry, showed the photograph of a fine and well-preserved reredos of fifteenth-century English work, now in a church in Iceland. It contained seven panels of the Passion and Resurrection framed in the original woodwork.

The local records mention alabaster salt cellars and images painted and gilded. Heads of St. John the Baptist, similarly treated, some in frames or tabernacles. It will be seen that the majority of the sculptors were called "image makers," but whether these images extended to the recumbent effigies in the churches of this and the neighbouring counties remains to be proved. One thing is certain, that the neighbouring quarries of Gotham, which must have been worked for centuries, were capable of producing blocks large enough for the purpose.

We have early notices of alabaster men working at Burton-on-Trent, where they would no doubt obtain their material from Tutbury and from Chellaston, where beds of the stone were wrought; also at Nottingham, where it is presumed the raw material was obtained from Chellaston on the evidence of one cartload being brought from those quarries to Nottingham. Taking this view, it is assumed that the Nottingham sculptors, or alabaster men, who were admittedly numerous, were wholly engaged on small outside work, making panels for altar-pieces, small painted heads of St. John the Baptist, small figures, such as those

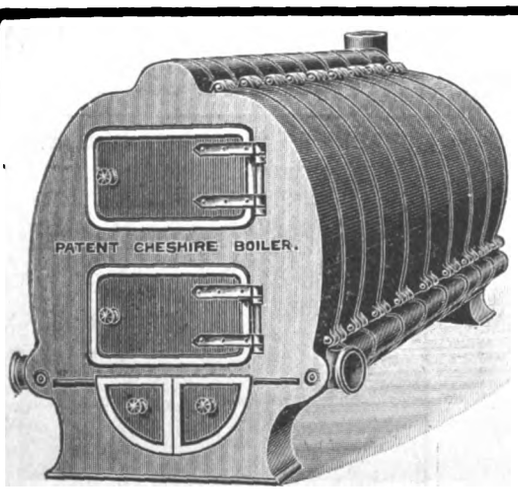
Digitized by Google

found in Flawford Church, &c., and that the life-sized effigies in alabaster, contemporary with this second-grade work, were not wrought in our old town. Two facts which stand out very prominently do not square with this theory, viz. (1) that as early as 1371, what appears to have been the greatest work in alabaster up to that time—the altar table or reredos, &c., an order given by Edward III. to beautify his Royal Chapel of St. George at Windsor Palace—was carried out by Peter, the (alabaster) mason of Nottingham; (2) that in the decadent days of wrought or sculptured alabaster, four centuries and a quarter later, say about 1790, the finest quarries in the kingdom were working at Red Hill, or Gotham—in other words, at the gate of our town.

To put old Nottingham on an equal footing in the alabaster trade with Burton-on-Trent, Cheliaston, and even York, we want to recover one missing link, *i.e.* to arrive at a date before, say, 1790, when the gypsum quarries at Red Hill, Gotham, were established, or if they existed in the fourteenth and fifteenth centuries.

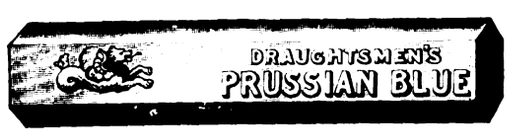
I personally have no doubt that they have been known a thousand years or more, for the fine beds there deposited are natural outcrops on the hill sides a rabbit could find; but that they were quarried in the time of "Peter, the mason of Nottingham," is an interesting detail in which we lack the essential element of proof. It is a lost link in the history of the town I regret being unable to recover, one in which personal belief can weigh nothing. As all this matter has come to light since the publication of the first volume of "The Records of the Borough," in 1882 (before which we had no knowledge that Nottingham had ever been an Art centre for sculpture in alabaster), the recovery of this missing link should not be viewed as hopeless.

POTABLE WATERS.



At a meeting of the Society of Engineers held at the Royal United Service Institution, Whitehall, on Monday evening, May 7, Mr. Maurice Wilson, president, in the chair, a paper was read on "The Chemistry and Bacteriology of Potable Waters," by David Sommerville, B.A., M.D., D.P.H., M.R.C.P., lecturer in Public Health, King's College, London, and of which the following is an abstract:—

The author introduced his subject by pointing out that it touched intimately at many points the profession of engineering. After defining normal and polluted waters, he discussed sources of supply, and laid it down as essential that owing to the frequently intermittent nature of pollution, systematic and numerous chemical and bacteriological examinations were necessary, and that no report on the safety of a water supply could be considered complete that did not include a careful examination of its source. He proceeded to deal with rain water, surface waters, ground water and deep wells, dwelling at some length upon the factors which governed the character, and rate and direction of flow, of the ground water.



In connection with the pollution of shallow and deep wells Dr. Sommerville deplored the fact that too frequently, even on large estates, where the excuse of limited area could not obtain, the well and cesspool were constructed close together. He referred to the fallacious belief that if the well was placed in higher ground than the cesspool pollution must be out of the question, whilst the only factor of importance in the problem was not the location of the outlet of the well, but the relative position of the cesspool and the point where the water entered the well. Landowners, he said, should not lose sight of the fact that they could only control the disposition of the surface of their properties.

Water examinations were next dealt with, and of four methods at present in use—physical, chemical, biological and bacteriological—the greater portion of the paper was naturally devoted to the chemical and bacteriological. It was pointed out that where pollution was so gross as to be easily detected by a physical examination, the routine chemical analysis was not only useless, but absurd. A critical examination of some of the more important items in the chemical analysis was made, and the necessity for uniformity of procedure in certain instances emphasised. The author pointed out that the consideration of nitrogenous matter had its value not from the standpoint of absolute amounts, but through the daily relations and variations which appeared in the analytical series. Inorganic constituents should be uniformly expressed as positive and negative ions.

Reference was next made to iron and lead in waters,

CAST-IRON SECTIONAL BOILER.
Cotton's Patent.
NO BRICKWORK REQUIRED.

and plumbo-solvency was treated at some length. Chlorine, nitrates and nitrites were discussed and nitrification and denitrification fully studied. Hardness was briefly treated, and a ready method for the estimation of carbonates and bicarbonates noticed.

The interpretation of the results of the chemical examination was very fully dealt with. It was shown that it was impossible to erect water standards, and that the value of each water must be intelligently estimated on its own merits. The importance of liability to sewage pollution was enforced, as also the fact that positive results in the search for sewage were much more easily dealt with than negative.

In the section treating of the bacteriological examination attention was focused on a few pathogenic bacteria. Three diseases were stated to be almost wholly water-borne—typhoid, cholera and dysentery. Typhoid touched us most nearly, and although its micro-organism could not usually be isolated from water supplies, bacteriological evidence of its possible presence was derived from the discovery of bacteria characteristic of sewage, especially the B. *coli communis*.

The comparative values of the chemical and bacteriological examinations were fully considered, and it was concluded that both had their limits of usefulness, that neither were infallible, that each was assisted by the other, and that the value of either lies in that judgment and skill put into the interpretation of the results which arose only from an intelligent use of a wide and varied experience.

Domestic filters were then considered, and lastly, filtration on the large scale. In conclusion, Dr. Sommerville stated that the ideal treatment of a water supply was thorough protection at its source, continued protection throughout its after-history, and efficient sand filtration prior to distribution.

PUBLIC WORKS IN EGYPT.

THE following account of some of the important works in progress in Egypt is given by Lord Cromer in his latest report:—

The contract for the Nile bridge at Rodah was given to Messrs. Arrol & Co. Under the terms of the contract the work was to commence on December 1, 1904. Progress appears to have been somewhat slow, and it seems doubtful whether the work will be finished within the contract time.

In consequence of the large annual increase in the traffic across the Nile and the rapid extension of the suburbs of Cairo on the west side of the river, it has been decided to build a new iron bridge across the river between the existing bridges of Kasr-el-Nil and Embabeh. Save in very exceptional cases, I have always been in favour of adopting the system of public tender for Government contracts in Egypt. On the other hand, I am very clearly of opinion that, especially when those who tender are of different nationalities, it is most desirable, if it be at all possible, to limit the point which is to be decided, when the adjudication is made, to one single issue, namely, that of price. When once matters of appreciation and taste are brought in, a wide door is opened for difference of opinion. The officials of the Government are placed in a very invidious position, for although it is quite certain that all they wish to do is to act in the best interests of the public, it is equally certain that, whatever they may decide, they are hardly likely to escape accusations of partiality or favouritism. In the case of the Rodah Bridge, the various competing firms were invited to prepare their own designs, and, moreover, a good deal of latitude was left as regards the material which was to be used in various parts of the structure. Hence, much difficulty arose in deciding which was really the best offer, and it was only by the moderation and good sense of all concerned that an acrimonious discussion did not take place as to the rival merits of the proposals put forward by firms of different nationalities. It is desirable that any risk of this sort should be avoided in the future. It has, therefore, been decided that the Public Works Department, with the assistance of whatever technical advice they may think fit to call in, shall, in the case of the Boulac Bridge, prepare their own designs, and shall lay down, in the minutest detail, the materials which are to be used. The competing firms, who will be selected from various nationalities, will, of course, have to conform strictly to the specification. There will then be only one question to be decided, namely, that of price. I trust that the adoption of this system will obviate all the difficulties

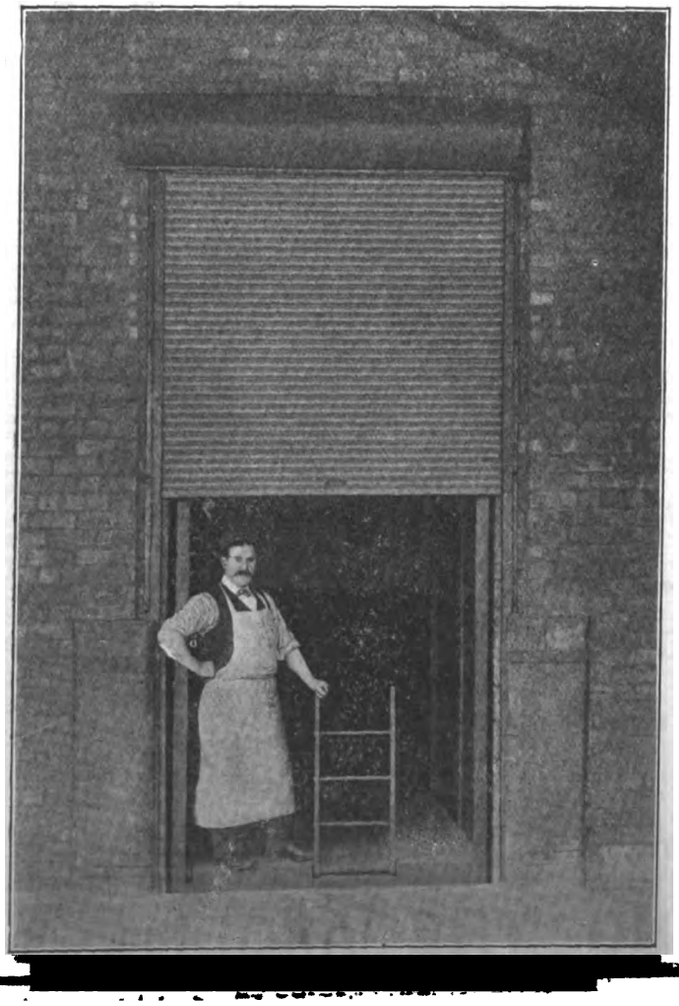
which occurred in connection with the construction of the Rodah Bridge.

Public Buildings.

It cannot be doubted that the progress of the country is being retarded in many directions from a want of public buildings. In spite of an expenditure of E1,600,000*l.* since 1891, an immense deal still remains to be done.

In my last annual report I dwelt on the financial aspect of this question, but the matter is of such importance that I had perhaps better revert to it. A large sum of money, which is still unappropriated, lies to the credit of the Egyptian Government in the Reserve Fund. Had this money been borrowed I do not think that it should on any account be used save for remunerative expenditure, such as railways and irrigation. But inasmuch as it consists entirely of the accumulated surpluses of past years, there would, theoretically speaking, be no fatal objection to employing it on expenditure which cannot strictly be called remunerative, such as the building of prisons, hospitals, Government offices, &c. On the other hand, it is certainly far safer, from the financial point of view, to charge the whole of this expenditure to revenue. This, as a matter of fact, is what has been done up to the present time. The whole of the expenditure for public buildings figures in the accounts and estimates for the past and current years and is termed "special."

The grants under this head in 1905 amounted to E396,000*l.*, E299,000*l.* having been provided in the estimates, and additional grants of E97,000*l.* having been made during the year. The estimates for 1906 provide for an expenditure under this head of no less than E464,000*l.* These grants are distributed amongst all the Departments of the State, the largest being to the Ministry of Public Instruction, which takes nearly E79,000*l.*



For two reasons, the whole of this subject requires very careful consideration before the estimates for 1907 are prepared In the first place—though I do not say that the Egyptian Government cannot afford this large expenditure without incurring the risk of a deficit—it is none the less true that if such large sums are spent on public buildings, either any fiscal reform involving a loss of revenue will have to be postponed or useful expenditure in other directions will have to be curtailed. It becomes, therefore, a question of the relative urgency of these various subjects. In the second place, experience has shown that up to the present time, at all events, the whole of the grants are not expended in the year. Thus, of the E396,000*l.* which, as I have already mentioned, was the grant for 1905, E326,000*l.* was placed at the disposal of the Public Works Department; the total amount expended, however, was only a little over E123,000*l.* I do not say that the extent to which the actual expenditure fell short of the estimates is in any degree the fault of the Public Works Department. A good deal, I believe, depends upon the fact that much delay ensues in ascertaining from the other Departments concerned what their exact requirements are. However this may be, it would appear desirable to take steps to bring the estimates for the future more into conformity with the amount of money which it is actually intended to spend.

Town of Cairo.

About E27,000*l.* was spent during the past year upon new roads in the town of Cairo. The asphalting of the streets in the native quarters of the city cost about E16,000*l.* The balance was spent upon the construction of the new thoroughfare to Abbassieh, known as the Boulevard Abbas. Owing to the delay on the part of the Cairo Gas Company in relaying their mains, it was, unfortunately, only possible to lay down 6,000 square metres of asphalte in 1905, instead of 20,000 square metres as had been estimated.

The total area of roads in Cairo is at present 2,833,000 square metres. Of these 47 per cent. are entirely unpaved, 28 per cent. are macadamised with soft limestone, 23.75 per cent. are well made with basalt, and 1.5 per cent. are laid down with asphalte.

As regards the public lighting of the city, I have to report that important modifications were made during the past year in the contract with the Cairo Gas Company. The price of gas for public lighting has been reduced by about 40 per cent. The Government has agreed to extend the electric light contract for twenty years, and to waive their right to repurchase at the end of thirty years. Many obscure clauses in the contract were also redrafted, with the result that the relations between the Government and the company now stand on a more satisfactory basis than heretofore. The price of gas is now .4187 franc per cubic metre.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 P.M. *on Thursdays.*

COMPETITIONS OPEN.

GLOSSOP.—June 26.—For the erection of a nursing and convalescent home at Glossop, at a cost not exceeding 6,000*l.*, to include building, decorations and furniture. A premium of 20*l.* will be awarded for the design placed first, and 10*l.* for that placed second. Town Clerk, Glossop.

LIVERPOOL.—July 2.—For a secondary school for girls in Aigburth Lane. Architects must be practising as principals in Lancashire or Cheshire. Conditions, &c., sent on the remittance of one guinea to Mr. E. R. Pickmere, town clerk, Municipal Offices, Liverpool.

BATLEY.—May 21.—For the erection of two houses and boundary walls in Deighton Lane. Mr. John H. Brearley, architect, Commercial Street, Batley.

LUXFER SASH CANOPY SKYLIGHT PAVEMENT PRISMS

AN EXPLANATION.—The Luxfer Prism is a flat-backed prism, and is the best for Daylighting dark interiors. The absurdity of any claim to the contrary can easily be demonstrated. Prisms with corrugated backs were patented by the Luxfer Company in 1897, and discarded in favour of a more perfect invention, viz. The Luxfer Prisms, that have been sold in this country during the past six years.

The British Luxfer Prism Synd., Ltd., 16 Hill St., Finsbury, E.C.

Digitized by Google

Digitized by Google

Scotland.—May 21.—For the mason, carpenter, slater, plumber, plasterer, painter and glazier's work of villa at Ralia, near Newtonmore. Mr. Alexander Mackenzie, C.E., architect.

Scotland.—May 25.—For the various works in connection with the erection of new manse, Shiells Road, Kelty, for the Kelty Established Church congregation. Mr. T. Hyslop Ure, architect, 43 Carnegie Street, Dunfermline.

Scotland.—May 29.—For the brick, joiner, plumber, plaster, concrete, cement and tile works of proposed additions to and alterations on the Queen's Arms hotel, Lochgelly. Mr. James T. Scobie, architect, Dunfermline and Lochgelly.

Scotland.—June 1.—For the erection of a dwelling-house at Portpatrick, in the county of Wigtown. The Director of Works Department, Admiralty, 21 Northumberland Avenue, London, W.C.

Sleaford.—For proposed Primitive Methodist chapel, assembly hall and schools. Messrs. Herbert Walker & Son, architects, Nottingham and Sleaford.

Stockport.—May 22.—For the manual and team labour and materials required in erection of female conveniences at Heaton Norris recreation ground. Mr. John Atkinson, borough surveyor, Stockport.

Wales.—May 23.—For building twenty-one houses at Aberaman. Mr. T. Roderick, architect, 23 Clifton Street, Aberdare.

Wales.—May 23.—For the erection of eight houses in Cwmcarn. Mr. R. L. Roberts, M.S.A., Abercarn.

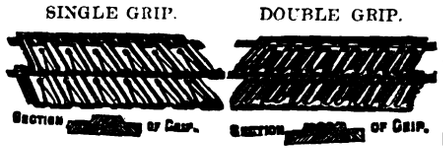
Wales.—May 25.—For the erection of a villa residence at Llwydcoed, Aberdare. Deposit 1*l.* 1*s.* Mr. J. Llewellin Smith, architect, Aberdare.

Wales.—May 25.—For rebuilding a portion of the Prince of Wales inn, Pontllanfraith, Mon. Mr. R. L. Roberts, Abercarn.

Wales.—May 28.—For restoring, including new chancel screen, reredos, reseating, flooring and heating, &c., at St. Mary's, Glyntaff, Pontypridd. Mr. Arthur Lloyd Thomas, engineer and architect, Church Street Chambers, Pontypridd.

Wales.—May 29.—For the erection of sixty houses and roadmaking, &c., at Senghenydd. Mr. John H. Phillips, architect, Clive Chambers, Windsor Place, Cardiff.

West Hartlepool.—May 25.—For infirmary extension and new laundry to be erected within the union grounds. Deposit 1*l.* 1*s.* Mr. John J. Wilson, architect, Tower Street.



Wheatley Hill Colliery.—May 19.—For erection of forty workmen's dwelling-houses at Wheatley Hill colliery. The Company, Thornley Colliery Office, Thornley, R.S.O.

At the North Staffordshire infectious diseases hospital at Bucknall a great subsidence recently took place at one end of the building, where there are 100 patients. Cracks appeared in the walls, and excavations showed that under the foundations of the boiler-house was a seam of coal, which was on fire. When the hospital was erected no coal was known to exist near the surface. The coal, both burnt and unburnt, must be excavated to a depth of 16 feet beneath the boiler-house, and, in order to prevent any outbreak in future, a foundation of blue bricks will be put in. The walls will have to be rebuilt. The North Staffordshire Joint Hospital Board will endeavour to secure the cost of the works from the insurance company.

A Conciliation Board in connection with the building trades has been recently formed in York between the York Master Builders and Contractors' Association and the several operative societies of bricklayers, carpenters and joiners, and stonemasons. The object of the Board is to adjust questions or disputes relating to hours of labour, rates of wages or working rules, &c., which may arise from time to time, and which will be referred to the Board, either by employers or operatives, with a view to an amicable settlement of the same without resorting to strikes or lock-outs. At the first meeting of the Board Mr. George Sharp (president York Builders' Association) was elected chairman; Mr. F. W. Magson (Operative Bricklayers' Society), vice-chairman. Mr. C. Dent (York Builders' Association), and Mr. F. W. Nicholson (Joiners' Society) were appointed joint secretaries to the Board.

TRADE NOTE.

THE additions to the Victoria Hospital, Norbiton, are being warmed and ventilated by means of Shorland's patent Manchester grates.

MESSRS. MARTIN EARLE & Co., of Rochester, and Messrs. J. C. Johnson & Co., of London, are shipping 6,000 tons of cement to San Francisco in the steamer *Ardmount*, of Glasgow, which is now taking in the cargo off Rochester.

NEW CATALOGUES.

THE catalogue of lifting and haulage machinery by Messrs. W. J. Furse & Co. only relates to a part of their productions, but a very important part. Their special gearing and elevators have been used in a great variety of buildings, and the arrangements for safety enable a cage to be stopped within ½ an inch on all ropes being cut. Lifts and hoists are of numerous kinds, and the prices are generally stated. The catalogue also shows overhead travellers, collapsible gates, motors and, in fact, whatever is needed for lifting weights vertically and carrying them a certain distance horizontally.

As long as we employ steam we have to depend on safety-valves. The captains of American steamers used at one time to show indifference to them, but their hardihood was not imitated elsewhere. The valve is a recognition of the strength of steam as well as of the principle that when we are using natural forces we must be respectful of the laws of nature. From Watt's time countless efforts have been made to make valves more safe and to prevent men from tampering with them. The catalogue of Messrs. James Baldwin & Co.'s new safety-valves is a most interesting document to all who have to study the steam-engine, for it shows the numerous varieties by which one of the greatest of difficulties can be overcome. The dead-weight valves act easily, and, indeed, in all the examples shown care is taken to employ simple mechanical laws. It is not difficult to have fantastic valves which look ingenious and work well in models, but in actual practice they are worse than useless. The Baldwin valves are generally applicable and are excellent in construction.

THE French Government are to build a dry dock at the port of Brest, of a length of 670 feet, for the construction of the largest warships. The work will be pushed forward in order that the dock may be utilised for the building of an ironclad of 18,000 tons.

A MOTOR road between Bankok, Siam and Penang, Straits Settlements, is under consideration. The distance will be 700 miles, the object being quicker postal communication with Europe and more rapid passenger traffic, and will also result in a closer relation between the native States and Siam.

THE Jewell gravity filters erected by the Alexandria Water Company for the water supply of that city were opened in April 1905. The conditions under which these filters were established are, says the British Consul in his report, that they shall remove not less than 98½ per cent. of the bacteria contained in the raw water, and that the filtered water shall be bright and clear and never contain more than 100 bacteria per cubic centimetre. Samples of the water are analysed daily by the sanitary inspector of the town, and the filtered water has so far been purer than the specified standard, the average number of bacteria per cubic centimetre being from 35 to 50 only instead of a permissible 100. Consequently, though derived from the Nile by means of the dirty Mahmudie Canal, the water thus filtered may now be considered as a perfectly good drinking water.

VARIETIES.

MR. E. H. HARRIMAN proposes to raise 20,000,000*l.* at low interest towards the rebuilding of San Francisco.

THE Park Wesleyan Sunday schools, Leeds, which were erected at a cost of 5,000*l.*, were opened on Saturday. Messrs. Danby & Simpson are the architects.

THE Stepney Temple, which is the centre of the Wesleyan East End Mission, is to be rebuilt at a cost of 36,000*l.*. The new structure will seat 2,000 people.

THE Redcar Urban Council have resolved to apply to the Local Government Board for a loan of 1,400*l.* in connection with a salt-water scheme for street and flushing purposes.

THE St. David's United Free Church, Dundee, is likely to be sold to a motor car firm for 3,650*l.* It appears that within a very limited area there are no less than eleven similar churches.

THE Stirling District Asylum Board have resolved to proceed with the erection of a nurses' home at Larbert asylum at a cost of 9,000*l.* Dining and recreation-rooms and sleeping accommodation will be provided for eighty nurses.

A SCHEME has been outlined for connecting the four ports of London, Hull, Bristol and Liverpool by canals. The cost of constructing a canal from Birmingham to Bristol is estimated at 680,000*l.*, and of one from Birmingham to Liverpool at 2,220,000*l.*

THE Wilts County Council recently purchased a 500*l.* motor-car for the convenience of its surveyor in getting about the county. In a few months the initial outlay was practically doubled by the cost of repairs, and the car has just been sold at auction for 50*l.*

THE Birmingham Tame and Rea District drainage board on Tuesday decided that an application be made to the Local Government Board for sanction to a loan of 49,500*l.* for the construction of 6½ acres of bacteria beds at Minworth Greaves. More bacteria beds are required in order that the works may proceed satisfactorily.

THE surveyor to the Northwich Urban Council has reported that experiments with calcium chloride liquor had been remarkably successful, and it proved to be an admirable dust preventive. Having regard to the duration of the application, the cost was less than ordinary street watering.

THE Yarmouth Corporation are considering various schemes for constructing a fish dock. The most favoured proposal is for one of 15 acres in extent, to be cut on the South Denes, at present used as a racecourse, in which some 300 fishing-boats could be berthed. The cost of this undertaking would be 70,000*l.*

THE Corporation of London propose to extend the market accommodation at Smithfield by covering in an area of about 14,000 feet super between the fish, fruit and vegetable section of the Central General Market and the premises in the occupation of a cold storage company. Buildings are to be erected on the ground at a total estimated cost of 16,225*l.*

MR. TAFT, Secretary of War to the United States, has sent to President Roosevelt a recommendation that two dredgers should be purchased from the Scotch firm of Messrs. William Simons & Co. for use in the Panama Canal construction work. This firm sent in the lowest tender, the figure being 654,000 dols., while the lowest American tender was 724,850 dols.

THE main roads committee of the Cheshire County Council have decided that it is not expedient at present that the county surveyor should incur any expenditure out of county funds in connection with experiments with materials to prevent dust on the main roads, but they have authorised him to sanction the use by private individuals of such materials as he may consider advisable.

THE Salford Town Council are carrying forward a scheme for the erection of a new town hall at Peel Park, opposite the Technical Institute, and the town hall committee has voted a sum of money to enable the borough engineer to make boring experiments at Peel Park, with the object of ascertaining if satisfactory foundations can be found. The scheme is estimated to cost 80,000*l.*

THE Board of Agricultural Studies, Cambridge, reports that the Drapers' Company, to whom the Board is already indebted for the stipend of the professor, has offered 5,000*l.* towards the buildings required for the University Department of Agriculture, on the condition that an equal sum be raised by the end of this year. While no general appeal has been issued an attempt has been made to obtain some substantial subscriptions to meet the conditional offer, and already the Duke of Devonshire, Lord Rothschild, Lord Strathcona and Sir Ernest Cassel have promised 1,000*l.* each.

THE West Riding Rivers Board have agreed that the Sheffield Corporation be informed that, unless better progress with the scheme for the extension and improvement of the sewage works is reported by their next meeting, the question of taking legal proceedings must again be considered. It was stated that the sanitary committee of Sheffield have just decided to ask for 110,000*l.* with which to commence the scheme, and have under discussion as to whether to advertise for tenders or carry out the work themselves.

AN examination was held at the School of Hygiene at the University of Liverpool on the 8th and 11th inst., when forty-one students presented themselves to be examined for certificates of competency in sanitary science. The examiners were Dr. Vacher, county medical officer for Cheshire; Dr. Mussen, assistant medical officer for Liverpool, and Mr. James Wilding, engineer and surveyor to the Runcorn Urban District Council. The students who were successful in passing the examination will all receive certificates entitling them to act as sanitary inspectors.

THE Brighton Town Council on the 11th inst. adopted the following resolution of the works committee on the subject of the recent "Tarmac" case:—The committee have caused counsel's opinion to be taken with regard to the advisability of appealing against the decision of the Divisional Court, and are advised that an appeal should be lodged by the Corporation. They therefore recommend that an appeal be entered against the decision of the Divisional Court, and that the town clerk be instructed to retain counsel and agents and take all other steps necessary on behalf of the Corporation for the support of such appeal.

SIR JOHN DICKSON-POYNDER'S Bill to create a London Traffic Board has been issued. The object is to give effect to the recommendations of the Royal Commission on London Traffic by establishing a body charged with the duty of making a continuous study of locomotion and transport in Greater London, and of advising Parliament, Departments of State and local authorities on measures to effect improvements. The London Traffic Board is also authorised to act as arbitrator by consent of parties in disputes among local authorities and companies in relation to locomotion. The Board, as constituted by the Bill, is an advisory organisation, and no legislative or executive powers are conferred upon it.

THE annual meeting of the Iron and Steel Institute was held at the Institution of Civil Engineers, Great George Street, Westminster, on the 10th inst., Mr. R. A. Hadfield (Sheffield), president, in the chair. The income of the past year (6,271*l.*) was the highest on record. The expenditure amounted to 5,257*l.*, as against 5,727*l.* in 1904. There are now 2,200 members. The President handed to Comte de Lastours the Bessemer Gold Medal, won by M. Floris Osmond (Paris), and the Carnegie Gold Medal was presented to M. L. Guillet (Paris) and a special silver medal to Mr. Rosenhain (Birmingham). The Council recommended the award of 100*l.* scholarships to Messrs. C. A. F. Benedicks (Sweden), O. Stutzer (Germany), E. Hess (United States) and E. F. Low (London).

SIR ALFRED L. JONES has addressed the following letter to Vice-Chancellor Dale, of Liverpool University:—"My dear Vice-Chancellor,—I am glad to tell you that I have considered the matter again with our superintendent engineer, and we have agreed to carry a number of students again for the Liverpool University, to go a voyage in our steamers during their vacation. I am encouraged to do this by the great success which attended the idea last year, when we carried a great number, and I am sure it can have only one result, and that is great advantage to the student himself. The better we make the student the better we make our own possibilities."

THE Poplar Board of Guardians held a special meeting to consider the statements made in the House of Lords last week in regard to the alleged extravagance of the

Board. Mr. E. Ford, who presided, described Lord Balfour's statement as part of a systematic attack upon the Poplar Board. Lord Balfour said that the Board had spent 25,000*l.* on the engineering works at the Shenfield schools and 25,000*l.* without advertising for tenders. As a matter of fact, the total outlay on the engineering works, including the boilers, was 9,800*l.*, and they did not let the contracts without advertising for tenders. The architect replied to the statements of Lord Balfour, and said, with regard to the assertion that 55,000*l.* might have been saved on the internal fittings of the schools, that the whole cost of the schools was 22,115*l.*, while 500*l.* would cover the internal fittings. The Board adopted a resolution protesting against the departure from the usual course of public business by attacks reported to have been made by Lord Balfour of Burleigh based upon *ex parte* statements.

At Middlewich a Local Government Board inquiry has been held into the application of the Middlewich Urban Council for authority to borrow 14,800*l.* for purposes of water supply and reservoir construction at Delamere. Twelve miles of water mains will be necessary to connect the supply with Middlewich. A reservoir capable of holding 680,000 gallons will be built, and there will be two pumps capable of delivering 200,000 gallons a day. There was an unlimited supply at the springs, and Dr. Carter Bell, the county analyst, certified that it was of exceptional quality and purity. The borrowing powers of the town are 19,843*l.*, and the present scheme will bring the town's indebtedness to 19,237*l.* The application was for a loan repayable in sixty years.

The metropolitan paving committee having sent a letter to the President of the Local Government Board suggesting that he should receive a deputation on the subject of the protection of local authorities with regard to the opening of streets by public companies and others, received the following reply:—"The President desires me to refer to the reply given by the Prime Minister to a question by Mr. Remnant in the House of Commons on the 12th inst., viz. that the Government are not as yet in a position to express an opinion on the findings of the Royal Commission on London Traffic, and that they cannot hold out any hope of legislation on the question during this session, and to state that, as no legislation can be anticipated this session on the subject dealt with in the report of the Royal Commission, the President does not think it necessary to trouble a deputation to attend here at the present time." The paving committee is communicating with the President of the Local Government Board with a view to his receiving a deputation on the matter in the autumn before the details of any Bill dealing with London traffic are settled.

The British Consul in reporting on the trade and commerce of Stockholm and the eastern coast of Sweden for 1905, says the exports of stone show a considerable increase as compared with those of the previous year. It is thought that the negotiations which have been going on for several months between Sweden and Germany for the conclusion of a new commercial treaty between these countries —Germany being Sweden's principal customer for this particular article—will soon be ended, and that they are likely to have far-reaching influences on the prosperity of this trade.

BUILDING AND BUILDERS.

At the last meeting of the Guardians at Billericay, Essex, instructions were given to the architect to prepare the plans for an additional building at the workhouse.

Mr. John Davies, builder, has been added to the commission of the peace for the borough of Aberavon, in which he resides.

Mr. Benjamin Hannen, of Messrs. William Cubitt & Co., of Gray's Inn Road, builders, a director of Doulton & Co., Ltd., and of the National Mutual Life Assurance Co., left estate valued at 101,227*l.* gross, including 98,275*l.* in net personalty.

The Corporation of Dublin are appealing against the judgment in the King's Bench Division (Ireland) which was in favour of Messrs. Pearson, who claim 36,000*l.* for extra work in the erection of sewage tanks in connection with the Dublin main drainage.

At the meeting of the Southend Corporation on Tuesday, the 15th, it was decided to accept the tender of Messrs. J. S. Hammond & Son, of Romford, of 11,175*l.*, for the erection of the two blocks of the Bournemouth Park Road school, to accommodate 820 children.

ON the site of Gloucester House, the residence of the late Duke of Cambridge, there is now being erected in Park Lane, London, a block of six flats, which, when completed, will be let at rentals ranging from 1,500*l.* to 2,000*l.* Each flat will contain a hall, drawing-room, dining-room, smoking-room, billiard-room and boudoir, besides eleven bedrooms, a large kitchen and servants' hall.

THE Lambeth Borough Council are applying to the London County Council for sanction to a loan of 35,000*l.* on account of the cost of erecting the new town hall at the junction of Brixton Hill and Acre Lane. The total cost of the building is estimated at 43,000*l.* The finance committee recommend the London County Council to sanction the loan, on condition that the plot of land adjoining the site be dedicated to the use of the public.

A LARGE number of houses are proposed to be erected at Beverley on Garden City principles. A commencement is to be made with forty dwellings in semi-detached blocks of two. The greater number will contain six rooms, the rents varying from 12*l.* to 16*l.* a year. Each will contain a bath, the gardens being about 100 or 150 yards. The originator is Mr. Henry Vokes, builder, of Hull.

THE Home Secretary has sanctioned the proposal to purchase the Whalley Abbey site for the erection of a county lunatic asylum for Lancashire. There was considerable opposition to the use of the site for such a purpose, and at the Local Government Board inquiry, which lasted several days, it was contended that the building would utterly spoil the locality as a residential district. The site adjoins the grounds of the ruined Cistercian monastery. The asylum when erected will accommodate 2,000 patients, and the site has cost the county 30,000*l.*

ELECTRIC NOTES.

THE capital cost of the London County Council's electricity scheme, as given to the Commons committee, is over 3,250,000*l.*

THE Sunderland Town Council have withdrawn their opposition to the County Durham Electric Power Bill and the Newcastle Electric Power Bill, as the promoters accepted a clause that they were not to interfere with Sunderland in any way prejudicial to the ratepayers.

A GENERAL exhibition of all electrical devices that can be applied to domestic uses is to be held in Lyons during July and August next, under the auspices of the Agricultural and Scientific Association of Lyons. No motor will be accepted for exhibition which is over one horse-power. The object of the exhibition is to bring cheap electrical appliances nearer to the people, in order that the great mass may derive some benefit from them.

IN the Birmingham Corporation Act 1903 power was obtained to supply electrical energy in bulk, on certain conditions, outside the city. The electric supply committee are of opinion that it will be in the interests of the department that an extension of these powers should be obtained when next the Corporation are promoting new legislation, so as to permit current to be distributed in the areas of neighbouring local authorities, and generating and transforming stations to be erected there, subject to the consent of such authorities.

A SELECT committee of the House of Commons, presided over by Sir G. Doughty, on Tuesday began the consideration of the London Outer-Circle Railway Bill, under which it is proposed to construct a semicircular electric line through the northern suburbs from Feltham in the west to West Ham in the east. The length of the railway will be 32½ miles, and the entire capital of the undertaking six millions. Ordinary share capital would be represented by 4,500,000*l.*, and there would be 1,500,000*l.* of debentures. Five years would be occupied in construction.

THE Whitehaven Corporation have agreed to sell to the Cumberland Electricity and Power Gas Company their electric light undertaking. The price agreed upon is 25,000*l.*, and the purchase is to be completed between March 31, 1907, and March 31, 1910. In the meantime the Council are to carry on the undertaking as at present, and maintain it in a reasonable state of efficiency. The Corporation agree to take from the company their supply of electricity at the rate of 4*d.* per unit, the payment to include the maintenance of the lamps and everything in connection with street lighting. After March 31, 1910, the company bind themselves to supply current for public lighting at a rate not to exceed 3*d.* per unit, and the maximum for private lighting is to be 4*d.* per unit.

A LOCAL GOVERNMENT BOARD inquiry was held at Newcastle on Monday with respect to an application by the City Council for sanction to the borrowing of 2,450*l.* for fittings and furnishings for the Laing Art Gallery, and 4,500*l.* for lighting certain streets by electricity. Mr. R. H. Bucknill, the inspector, said the Local Government Board had been refusing loans for electric lighting by reason of the extra cost, as compared with gas. He quoted a case where the comparative cost was 1 in the case of gas and 1.74 in the case of electricity. The Board had desired him to go very carefully into this. The town clerk said the Council believed that electricity gave a better light than gas. They had got power to use electricity for purpose of lighting the streets. The inspector said the Local Government Board was under the impression that no station yet had been able to supply electricity to give as good a light as the incandescent gas at the same price. The matter had been gone into very carefully by the Board's electrical experts. It would be necessary that the applicants should show that they could give as good a light, and at the same price, as with gas. He would go into the matter later with the tramways engineer.

TROUBLESOME PLUMBERS.

THE Chorlton Board of Guardians have recently given a decision which will have a good effect in allaying aggressions which plumbers have been making in the Manchester district and elsewhere upon a kindred class of tradesmen. The plumbers, not satisfied with their legitimate and acknowledged trade of working in lead, have been endeavouring to obtain a monopoly of fixing and fitting piping in any kind of metal for hot-water services, claiming that no other trade shall touch this work. They object to the employment of the customary class of workmen, viz. hot-water fitters and heating engineers, although these men have all along done this class of work and are specially trained and qualified to carry it out in the most competent manner.

The contract for the heating and hot-water services at the Union Workhouse, Chorlton, was placed by the Board of Guardians in the hands of a firm of engineers (members of the National Association of Master Heating and Domestic Engineers) whose special business is planning and carrying out large installations of hot-water and heating services. The United Operative Plumbers' Association complained

Digitized by Google

to the Board of Guardians against this firm doing the work with which they had been entrusted, claiming that plumbers alone should be employed on it. The Board so far met the plumbers as to grant them an interview (at which the firm of engineers were also represented), and allowed them to state their case.

The result was that the Guardians declined to make any change, and passed a brief and emphatic resolution, deciding to take no action in the matter, thus leaving the work in the hands of the domestic engineers.

THE GOVERNMENT AND THE DUST NUISANCE.

The Local Government Board have now replied to the proposals of the Roads Improvement Association, that the Government should render assistance to the local authorities and the Association in their efforts to solve the dust problem. In effect the reply is that the Government can do nothing at present in the matter. The Association made the following five practical suggestions:—

1. That the Local Government Board prepare a return of the steps that have so far been taken by the highway authorities to construct roads of dustless materials.

2. That the engineering inspectors of the Board investigate these experiments and issue a report for the guidance of local authorities dealing with the results so far secured, and giving such guidance as may be possible as to methods of construction, degree of dustlessness secured, durability of materials and comparative cost.

3. That the local authorities be encouraged to contribute towards the cost of certain experiments with dustless materials about to be made by the Association, and that the Local Government Board appoint a representative to act upon the committee which has charge of these experiments.

4. That the Local Government Board represent to the Chancellor of the Exchequer and the Government the desirability of giving effect to the recommendation of the Royal Commission on Local Taxation (Lord Balfour's Commission), a recommendation subsequently endorsed by the departmental committee on highways appointed by the Board—that a further contribution of one million sterling should be made annually towards the cost of the maintenance of main roads, and that that grant should be accompanied by conditions calculated to secure efficient maintenance.

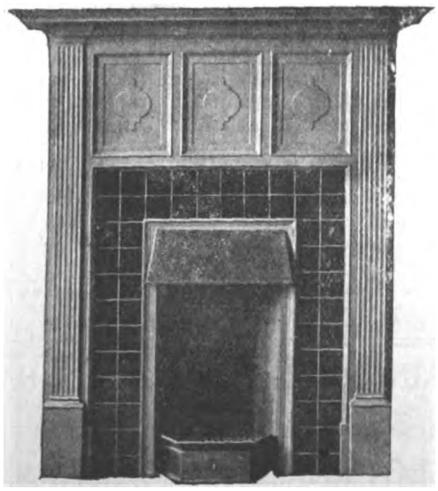
5. That the Board promote legislation empowering county authorities to fix a minimum width for all trunk roads.

The reply of the Board in respect of each of these suggestions is as follows:—

1. It does not seem to the President that the time has yet arrived when such a return as is suggested could usefully be obtained.

2. With regard to this suggestion, it would seem that the information referred to could be obtained only by constant observation, and would not be secured by the occasional visits of an engineering inspector. The matter will, however, be considered, and if it is found that the Board obtain any information which can usefully be imparted to highway authorities, that information shall be communicated to them.

3. Local authorities would have no authority to contribute towards experiments on roads in an area outside their jurisdiction, and therefore no encouragement could be given to their doing so.



As regards (4) and (5), both of which would involve legislation, without going into the merits of either recommendation, the Government cannot contemplate legislation on these subjects in the present session.

CAISSONS AND COMPRESSED AIR ILLNESS.*

In its simplest form a caisson when in position is an iron cylinder somewhat bell-shaped at its lower extremity and closed at its upper by a sliding door, which forms the ceiling of the chamber wherein the men work and which separates it from what is known as the material-lock, or the chamber through which the buckets filled with soil escape through the sliding doors that constitute the roof of the caisson. Leading out of the upper part of the caisson, just under-

neath the ceiling already referred to, is a door which, when open, allows of entrance into another chamber called the air-lock, and through which the men gain entrance into and emerge from the working chamber proper. If a caisson is large it may have two or three shafts or cylinders leading into it. It is not necessary to have the material-lock on the same cylinder as the air-lock. In Amsterdam I found the soil was removed through a material-lock on a different shaft to that by which the men entered and left the working chamber. This is known as the Zschokké lock and is worked automatically. On the Tyne the caissons had three shafts each with its own and material-locks. When built and placed in position, *e.g.* on the bed of a river, a caisson is a pneumatic chamber which would swim but for the large amount of concrete superimposed upon it. Air under considerable pressure is pumped into the caisson to keep the water out of it and allow the men to work therein. The surplus air escapes by the cutting edge of the bell-shaped expansion and by this means ventilation is secured. In tunnel making caissons are constructed in another manner, since the line of procedure is not vertical but horizontal. Caissons have to be strongly built so as to withstand enormous air pressures. On one occasion a caisson burst in France and the inmates were immediately killed. When the necessary depth has been attained the caissons are filled internally with concrete, and they then become the foundations upon which the piers of the bridge are built.

To enter a caisson a workman must first pass through the air-lock. Having closed the outer iron door of this chamber, a valve is opened which allows compressed air to escape into the air-lock from the working chamber, and when the pressure inside the air-lock has become equal to that of the inner chamber, the door which separates these two and which has been kept firmly closed owing to the high pressure, now opens practically of itself. Through this the workman passes into the shaft of the caisson, and descends by an iron ladder to the bed of the river, where excavation is proceeding. In passing through the air-lock the men undergo what is called "compression." The rise of pressure should be gradual, especially in the case of men who are commencing caisson work for the first time, for although no serious effects are usually produced, symptoms of an unpleasant nature may be experienced. As a consequence of the rise of air pressure, the membrana tympani may be forcibly driven in, and the men may not only suffer extreme pain in the ear, vertigo and headache, but may become deaf. Permanent deafness and rupture of the tympanic membrane have occurred. These can be prevented by the men swallowing air and passing it up to the eustachian tube into the middle ear, so as to equalise the pressure on the two sides of the tympanic membrane. Beyond these effects, which may be regarded more as unpleasant sensations than anything else, nothing is experienced by the men during compression. The abdomen shrinks, so that if a workman is wearing a belt, he generally tightens it.

Having finished their work the men leave the caisson by ascending the ladder and again entering the air-lock, the inner door of which they close behind them. The pressure within the air-lock and the working chamber is, for the moment, the same, but on turning the handle of a tube, which communicates externally, air is gradually allowed to escape from the air-lock outwards and the pressure gradually falls. When the pressure inside the air-lock equals that of the external atmosphere the outer door is opened, and the men emerge from the air-lock enveloped in a thick mist or fog owing to the low temperature of the expanded air. In coming out of the air-lock the men undergo what is called "decompression," and it is during, but more especially after decompression, that symptoms of caisson disease or of compressed air illness show themselves. Experience and experiment have alike demonstrated that it is rapid decompression that has to be guarded against, since it is responsible for much of the illness that occurs. The sojourn in the air-lock ought to be proportional to the length of time the men have spent in the caisson, the depth at which and the pressure under which they have been working. During the act of decompression the cold in the air-lock is often intense. The temperature may fall as much as 40 degs. Fahr., and as the men have been previously heated by their work the sudden chilling of the surface of the body may have a prejudicial effect. When in Amsterdam a few months ago I was much gratified by seeing the workmen emerge from the air-lock each with a blanket-shawl round his shoulders and trunk, the gift of the employers. In order to reduce the risk of chilling of the body and to make their period of confinement in the air-

Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied. It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

ANTHROL

The result of much practical experiment has shown it to be the **most** efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

lock as comfortable as possible for the men, the Dutch employers heat the air-locks by electricity. This circumstance, coupled with the fact that the men are paid for the time spent in the air-lock, has diminished the impatience of the workmen and made them more submissive to the length of time required to be spent in decompression, which in Holland is longer than in most countries.

The pressure inside the caisson is regulated in accordance with the depth the men are working at. In tidal rivers this pressure rises and falls. One pound of air-pressure displaces 2 feet 4 inches of water. In other words, 10 metres of water are equivalent to 1 atmosphere of pressure; or, expressed otherwise, 1 atmosphere—*i.e.* a pressure of 15 lbs. to the square inch—is required for every 33 feet of water. If men were working at a depth of 100 feet 3 atmospheres are required, or a pressure of 45 lbs. to the square inch inside the caisson. In speaking of pressure inside the caisson, the figure is always that over and above the normal atmospheric pressure, of which no notice is taken.

Only skilled and careful workmen should be in the charge of the air-lock and of the movable doors inside the caisson through which the excavated soil is removed, since the slightest carelessness and inattention to duty may be fraught with the most serious consequence to the lives of the men inside the caisson.

The time spent by the men in the caisson is inversely proportional to the pressure. Experience has shown that as excavation proceeds and greater depths are reached the pressure rises and the shift has to be shortened. At Newcastle there were a day and a night shift. The men worked on an average 10¼ hours, viz.—

6 A.M. to 8.30 A.M.	=	2½ hours
9.15 A.M. to 1 P.M.	=	3¾ ,,
2 P.M. to 6 P.M..	=	4 ,,
		10¼ ,,

when the pressure was 25 lbs. The length of the shift was shortened as the pressure rose to 35 lbs. Four hours was the longest time spent at a time in a caisson, and the greatest depth attained was 70 feet below high-water level mark. At St. Louis, when the pressure was 50 lbs., one hour at a time was spent in the caissons. At the new viaduct in course of construction at Amsterdam I found the men working at a depth of 66 feet and a pressure of 30 lbs. Here the men work on a four hours' shift twice a day, separated by an interval of eight hours.

Since the longer a person is immersed in compressed air, and the higher the pressure he is exposed to, the greater must be the amount of air absorbed and retained in solution in the blood and liquids of the body, so the more apparent is the necessity for shortening the shifts, and the length of time spent by the men in the caissons as the pressure is increased. Four hours, even under such low pressures as 20 to 25 lbs., are quite long enough. This was found to answer well enough at Newcastle, and it is the length of time allowed in Holland, when the men are working at a depth of 66 feet and in a pressure of 30 lbs. It is when the men are subjected to too rapid decompression that danger arises. The difficulty is to get the workmen who are coming off their shift to recognise the necessity of slow decompression. One minute for every 5 lbs. of pressure or three minutes for each atmosphere was the time allowed on the river Tyne for decompression. To some physiologists this is too short a time, and it is certainly short when compared with the forty minutes required in Holland for the decompression of men who have been exposed to two atmospheres. Hill and Macleod recommend—

Atmospheres.	Pounds.	Shift.	Decompression Period.
+2	30	4 hours	30 mins. to 1 hour
+3 to 4	45 to 60	4 hours	1 hour to 2 hours
+5	75	1 hour	1 hour to 2 hours
+6 to 7	90 to 105	½ to 1 hour	2 hours

No workman should be employed without having been previously examined by a medical man. No man who is addicted to alcohol, nor one who is subject to catarrh of the nose and throat, or who has a weak heart and lungs should be employed. Experience has shown that young men between the ages of 20 and 30 who are temperate, whose tissues are still elastic, men who are of spare rather than of stout build, not only do the work better, but are not so

liable to caisson disease. Snell's experience, as seen from the subjoined table, is confirmatory of the opinion I have just expressed:—

PROPORTION OF SICKNESS AMONG MEN OF DIFFERENT AGES.

45 to 50 . .	3	5	166·0

For muscular pains, rest in bed and warmth, and when severe, hypodermic injections of morphia may be required. Nothing gives such rapid and lasting relief as placing the men back again in the air-lock and recompressing them. There ought to be a medical air-lock close to the caissons large enough to accommodate two or three men in the recumbent position, and which should be kept comfortably warmed. If workmen who are ill are to be recompressed, the compression should be made without delay. While this gives almost immediate and permanent relief in cases of muscular pains and in minor forms of loss of power, it is impossible to say how far it is capable of doing good in the severe type of nervous symptoms, where paralysis is pronounced and extensive. H. von Schrotter has on theoretical grounds suggested that caisson workers should have the nitrogen in their blood which has been absorbed from the atmospheric air under high pressure washed out by breathing pure oxygen for five minutes before decompression. The suggestion has been proved to be practicable in the case of animals. Under the average pressures in which men work it is scarcely called for. If pure air is supplied to the men, and plenty of it, and the shifts are not too long, there is not the least doubt that work in compressed air could be carried on at greater depths and under higher pressures than has hitherto been attempted, so that should the occasion demand it engineering operations of even greater dimensions could be undertaken and carried to a successful issue from the point of view of the health and safety of the workers. It is a question of close attention to minute details, and of these the most important are a plentiful supply of pure air and slow decompression.

BIRMINGHAM CORPORATION AS GASFITTERS.

THE members of the Birmingham and District Master Gasfitters' Association would not be happy, says the *Birmingham Daily Post*, unless they had a grievance against the gas department of the Corporation. For years they have been endeavouring to prevail upon the City Council to abolish the fittings department of the gas undertaking, and although they always receive the same answer, and one which is satisfactory, at any rate, to the ratepayers, they are never satisfied. In January they once more approached the department, and asked the committee to discontinue the sale of fittings. Then they were told what they had been repeatedly told before, that the department did not advertise, did not canvass for trade and did not tender for work unless requested to do so, that they charged an adequate profit on both materials and labour, and paid the full standard rate of wages. The gasfittings business forms an asset of the gas undertaking, and was taken over when that undertaking was originally acquired by the Corporation. Moreover, it is a business which is conducted by most corporations, and in Birmingham it is regarded as a great convenience to the public. Consumers go to the gas department for fittings, not because they are buying in the cheapest market, but because they know the work sent out by the department to be reliable. If the committee discontinued that business it would not benefit the trade, because more people would enter into it, and competition would thereby become keener. The gas committee and the Corporation do not feel justified, as the trustees of the ratepayers, in abolishing their business in the sale of fittings.

Now they have gone a step further, and on Monday Birmingham was placarded with large posters printed in red and black ink, making certain allegations against the gas department in the form of questions, and appealing for the assistance of the ratepayers in compelling the

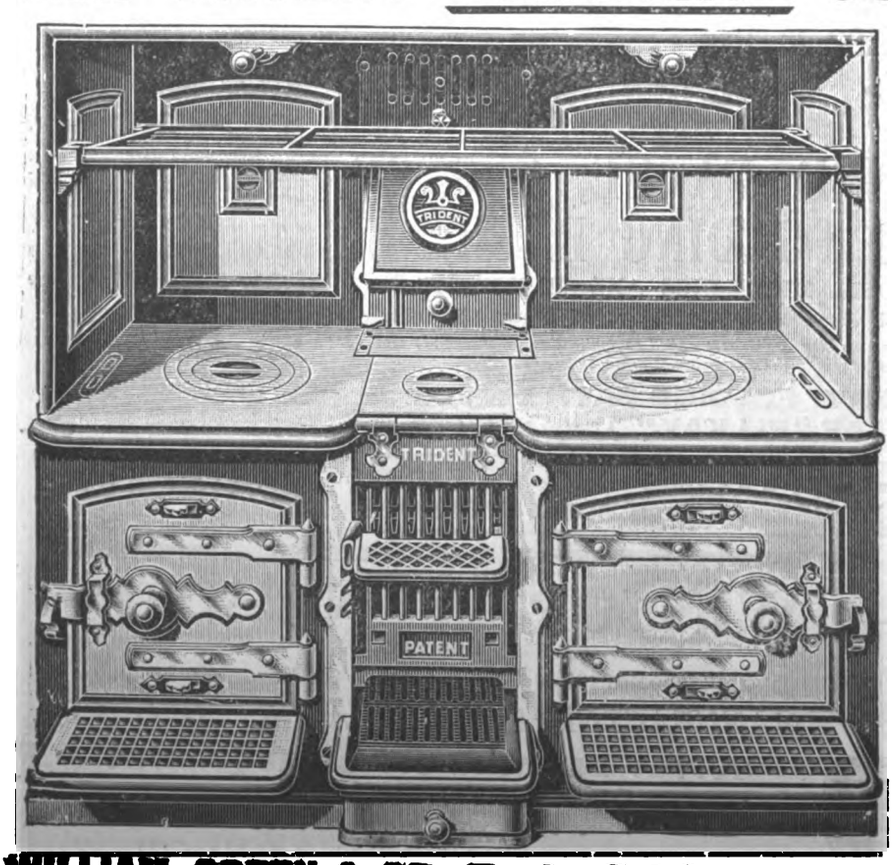
department "to give up this unjust trading and shopkeeping a gainst a section of the ratepayers which, if successful, will give the gas committee greater opportunities of devoting their time and attention to the cheapening of the production of gas and thereby reducing the rates." The appeal is made "To the citizens and ratepayers of Birmingham and district," and as it is just as well that the public should have the advantage of an early answer to those questions, a representative of the *Daily Post* interviewed Mr. G. Hampton Barber (secretary of the department) on the subject. The first of the five specific questions is, "Is it a fact that since the Corporation have acquired the gas undertaking secret commissions have been paid to some of the employés?" Mr. Barber says that in a period of twenty-eight years one employé was found some years ago to have received commissions from a firm of manufacturers, and his services were promptly dispensed with by the gas committee, and all dealings with the firm were at once stopped. The gas department employ some hundreds of workpeople, and most people will regard it as a good record that only one wrongdoer should have been discovered in twenty-eight years.

The next question is, "Is it a fact that one of the aforesaid officials was discharged by the secretary for receiving secret commission? Why was this question not raised in the City Council?" The one official has already been mentioned, and the matter was not raised in the Council because it was departmental, and matters of administration are entirely left to the committee.



"Is it a fact that the Corporation are employing youths to do skilled work at 15*s.* per week, thus endangering the lives and property of the community?" We are assured that the statement in question is not true. A strictly limited number of apprentices nearing the completion of their time, who have been trained in the department and are known to be capable of doing their work, are, under the supervision of a carefully selected skilled man, allowed to fix meters and fittings in small tenements. Apprentices are treated like this by every employer of labour; otherwise young men could not be properly trained in their work.

The fourth question is, "Is it a fact that the Sheffield Gas Company can supply gas to the householder at 1*s.* 5*d.* per 1,000 feet, and pay 10 per cent. dividend to its shareholders, whereas the Corporation of Birmingham charge the householder 2*s.* 6*d.* per 1,000 feet?" It is very difficult to compare gas undertakings in various towns one with another. Sheffield possesses geographical advantages over Birmingham by being nearer the coalfields and closer to the seaboard for the sale of residual products. The statement that all householders are charged 2*s.* 6*d.* per 1,000 feet by the Birmingham Corporation is not quite correct. Consumers of under 50,000 cubic feet are charged 2*s.* 6*d.*, and consumers of over 50,000 cubic feet pay 2*s.* 3*d.*, less 5 per cent. discount. The price at Sheffield is net, and in that town meter rents are paid by the consumers, and are equivalent to more than 1*d.* per 1,000 cubic feet, whereas in Birmingham meters are supplied in most instances free.

The last question is, "Is it a fact that the Corporation gas department supply their workpeople with American-made tools, and that they use American and continental tubes and fittings to the detriment of Birmingham manufacturers?" Mr. Barber says that a few hundred tools of American make, better adapted to the purposes of the department than those of British make, are in use, but their purchase does not involve an average outlay of more than 50*l.* per annum. No tubes and fittings of American or continental make are used by the department. The malleable iron pipe-fittings are purchased from merchants, who probably obtain them from the Continent, but the department do not themselves deal with the Continent. They cost about half the price of British-made articles, and the outlay in respect to them is about 350*l.* per annum. Consequently, the whole of the expenditure to which attention is drawn in the question represents about 400*l.* per annum, and the turnover of the department is nearly one million sterling per annum.

Whether the answers to the questions will be deemed sufficient for the members of the Gasfitters' Association it is impossible to say, but they should commend themselves to the ratepayers, especially when it is remembered that the price of gas would be higher if there were no fittings department. The gas committee every year give a substantial sum to the city to be applied in the reduction of the improvement rate. This year the amount is 54,546*l.*, which is equal to a rate of 5½*d.* in the pound.

Well finished!

A job finished with Hall's Sanitary Washable Distemper is well finished. It is finished for health and finished for beauty. It remains clean, sweet, and fresh, because

Hall's Sanitary Washable Distemper

is washable, is dust and germ proof and neither fades nor changes colour.

The Hall's Distemper of to-day is better than ever, year by year it has improved its many admirable qualities; its composition has been altered wherever the experience gained by severe scientific and practical tests and in the making of thousands of tons per annum have shown improvement to be possible.

Better than ever because—

It mixes more readily,
Works more easily,
Covers more effectively,
Dries more quickly.

Hall's Distemper is used and recommended by leading Builders and Decorators. It is made and stocked in 73 distinct colours ready for immediate delivery in any quantity.

THE MOMENTUM ENGINE (Patented). The Discovery of Mechanically-made Power.

NOW IN OPERATION AT THE ALEXANDRA PALACE, LONDON, N.

THE discovery; that, a free racing Flywheel possesses two natures, under one—it will receive rotary motion for the application of twenty pounds—notwithstanding it weighs a ton, and the second nature of the Flywheel is, that when it is connected to a working load it will throw out the rotary value of the centres of the weights in motion, by the square of the velocity, the centre of Gyration.

This discovery means several great Flywheels, each separately driven by any motive power, each Flywheel taking its regular turn to revolve a working shaft, to which it is connected, and from which it is disconnected for a greater length of time. Radium, and also these Engines, prove that the Theory of Energy is false. This Engine can be seen running the electric light at the Alexandra Palace. It is explained free.

The Engine has taken a first-class Diploma of Merit at the Alexandra Palace for Electric Lighting.

Offices :—ALEXANDRA PALACE, LONDON, N. Proprietor:—B. C. POLE.

DOULTON'S "IGNIS" BATH HEATER

IN COPPER.

No. 1497.

Bath heaters are of the greatest benefit in a house even though there is a system of hot-water circulation. The use of gas for cooking, &c., through a great part of the year, saves the ordinary firing and thus stops the hot-water supply. In such cases a bath heater is most serviceable, as a hot bath can be had at any time, at a minimum cost and without any trouble.

To meet this special demand Messrs. Doulton have made a heater that is both cheap in price and lasting in wear.

All parts are made in stout hardened copper, tinned inside.

The water in no case comes into contact with the gas.

Ordinary burners are used for heating instead of Bunsen's or atmospheric.

Cold water is raised 55° in passing through the heater, but water of a higher temperature can be obtained if the quantity is reduced.

The flow of water should be regulated by a stop cock, so as to give the amount of water required and no more,

PRICES.

No. 1497.	Polished copper heater to give 1½ gallons per minute	£4 15 0
No. 1497A.	Polished copper heater to give 2 gallons per minute	5 10 0

HALL'S Sanitary Washable DISTEMPER

The Real Sanitary Water Paint.

Hall's Distemper is the real Washable Distemper. It was one of the first invented, and is to-day better than ever, because the Manufacturers have, by reason of many years of scientific and practical tests, continually improved its manufacture until perfection has been attained.

Hall's Distemper is made in two qualities—the inside quality is specially for interior wall decoration, the outside quality being most suitable for all other purposes, both inside and out, whether on wood, stone, brickwork, or any kind of building material.

Its utility for Farm and Estate Buildings, such as dairy and tool-sheds, kennels, barns, shooting boxes, and temporary buildings of all sorts, is remarkable.

Full particulars of Hall's Distemper, in the form of a beautiful booklet, entitled "Modern Development in House Decoration," will be sent post free on application to the Sole Proprietors and Manufacturers,

SISSONS BROTHERS & CO., Ltd., HULL.

Telephone No. 4725 Holborn.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.*

COMPETITIONS OPEN.

"Standard" One-Piece Lavatories are eminently desirable for bedrooms and dressing chambers as well as bathrooms. Their beauty of pattern and chaste design—fitting harmoniously to any scheme of decoration; their pure-white, non-porous surface, and freedom from joints where dust and dirt can lodge, render them far more sanitary than old-fashioned washstands.

TRADE Standard MARK

Write for our special lavatory booklet, showing many beautiful new patterns, free on request. Also our elaborate catalogue **"MODERN BATHROOMS,"** showing many model interiors with approximate costs in detail.

AN ARTIFICIAL SLATE.

AT one time, and not so long ago, "Eternit" might have been introduced as a genuine product of the quarry. It has not only the appearance but the texture of slates, and is produced in terra-cotta, grey and blue, and is also supplied with highly polished surfaces. It is free of the "grain" common to natural slates. But of late years science has become an auxiliary of building, and "Eternit" is presented to the world as an "asbestos-cement slate." It has therefore the advantage of being able to resist fire beyond the power of ordinary slates. It is not affected by atmospheric changes, and is adapted for use in torrid as well as temperate climates. It is about a third of the weight of Welsh slate—and that is often an important consideration. It can also be produced in red, and thus becomes a rival of tiles. As a roofing material its value is consequently unquestionable, and it has been used to cover large areas by the War Office and the Admiralty, at home and abroad. It is not, however, merely as an exterior covering that it is serviceable. From its lightness it can be used for ceilings, and also as a lining for walls or for dadoes, which will be more than ornamental. The tensile strength is equal to 5,750 lbs. per square inch, and it can resist alternating electric currents up to 4,000 volts. It deserves to be recommended on account of its pleasing appearance, its strength, lightness, non-porosity, fire resistance, indestructibility by atmospheric influences, non-conductivity and economy. "Eternit" is supplied in two qualities. The slate is subjected to a hydraulic pressure of 1,500 tons, and is made in the usual slate sizes, and also in slabs of 8 feet 3 inches by 4 feet, under a pressure of 400 tons. The sole concessionnaires for this country are Messrs. G. R. Speaker & Co., of Manchester and 29 Mincing Lane, London.

TRADE NOTES.

IN the new offices of the Hearts of Oak Benefit Society the whole of the sanitary appliances were manufactured and supplied by George Jennings, Ltd., of Lambeth Palace Road, and exemplify their latest improvements.

A LARGE clock has just been erected at Bovinger Church, Essex, by John Smith & Sons, Midland Clock Works, Derby. It is fitted with all the latest improvements, and generally made to the designs of the late Lord Grimthorpe.

THE patent heating apparatus of the Brightside Foundry and Engineering Company, Ltd., has been adopted for the new War Office. The company have also been able to introduce their calorifers in various workhouses, hospitals and asylums in the provinces.

MR. A. MARSHALL, architect, Nottingham, opened last week a ten days' exhibition in Nottingham of his photographic work, most of which has received awards in English or continental exhibitions.

THE Smethwick Town Council are about to send a deputation to the Local Government Board for the purpose of laying before them the Council's views upon a desired alteration in the building by-laws, to the effect that the bedrooms on the first floor of every house should not be less than 9 feet high in any part.

ELECTRIC NOTES.

THE joint committee representing the Portslade, Shoreham and Southwick Urban District Councils, and formed to consider the question of electricity supply for the three districts, have now decided to obtain expert advice, and have resolved to consult Mr. Warden-Stevens, of Westminster.

IN consequence of the opposition raised by many members of the Marylebone Borough Council to a proposal of the lighting committee that Oxford Street, from the Marble Arch to Tottenham Court Road, should be lighted by the Scott-Snell self-intensifying system of incandescent gas, the committee will at the next meeting bring up an amended report and propose that the street be lighted by electricity, and that the work be placed in the hands of the borough electric light committee.

MR. H. R. HOOPER, Local Government Board inspector, held an inquiry on the 18th inst. at the Manchester town hall into an application by the Corporation to borrow 63,000*l.* for the electricity undertaking. The amount is made up as follows:—8,656*l.* for plant at nine sub-stations, 14,000*l.* for the supply of current to six firms, 12,450*l.* for prospective requirements in the supply of motive-power, and 27,394*l.* for distributing mains, service mains and other equipment.

THE Under-Sheriff of Yorkshire on Monday decided a claim for damages against the Bradford Corporation for 1,000*l.* in respect of injuries received in a tram accident at Buttershaw in November. The plaintiff, a steeplejack, got on to a tramcar, and upon the journey a collision occurred. He was thrown off his seat on the top of the car and his head came in contact with an iron standard, which struck his forehead. Before this accident his hair was brown. Now it is perfectly white. The Corporation offered him 40*l.* as compensation, but the jury awarded him 75*l.* and costs.

THE Glasgow Corporation have referred back to the bazaar committee a report with reference to public clocks for the city, with a series of recommendations to the effect that the Corporation should proceed at once to establish a complete public time service, combined with the supplying and lending of clocks, &c., to offices, shops and warehouses, as has been done by the Normal Zeit Company in Berlin and Antwerp, or alternatively that an arrangement should be made with Messrs. Barr & Stroud or the Magneta Company for an extension of their respective systems. The report also contained a list of forty-three sites of proposed electric public clocks.

MR. JOSEPH A. JECKELL, president of the Birmingham and District Electric Club, delivered an address to the members on Saturday dealing with "Electricity Supply from a Commercial Standpoint." In the course of his address, Mr. Jeckell pointed out the result of the working at the Coventry works. The gross loss in the first year before any capital charges were made was 41*l.*, and the average price obtained was 5.85*d.* per unit. Last year the gross profit amounted to 8⅓ per cent. on the capital averaged for the year, and the average price obtained for the whole of the current was only 1.84*d.* per unit. Mr. Jeckell then pointed out the difference between the old and new plant. At the end of 1901, when the plant had been running for five years, the total cost of manufacturing, including capital charges, was 6¼*d.* per unit. The revenue was only 4.14*d.* per unit, and the loss amounted to 2.11*d.* per unit. Since 1901 capital expenditure had been doubled by putting in new machinery, and they had reaped a gross profit of 13½ per cent. as compared with 2 per cent. on the old capital, whilst the price was reduced from 4.14*d.* per unit to 1.84*d.* per unit.

THE artificial lighting of the Hearts of Oak Benefit Society is electric, the current being supplied from the mains of the St. Pancras Borough Council. There are about 1,000 incandescent lamps, about 270 of which are carried by bronze electroliers specially designed by the architects and made by Messrs. Veritys, Ltd., of London and Birmingham. The lighting of the clerks' desks and tables has also received special attention. The contractors for the electric lighting are Messrs. Donnison, Sillem & Co., London. There are five electric lifts, namely, two passenger, two book, and one service. All have been made by Messrs. R. Waygood & Co., London. The contracts for the electric lighting and for the electric lifts were executed in accordance with plans and specifications prepared by Mr. W. H. Thornbery, consulting engineer, Birmingham, and under his supervision.

BUILDING AND BUILDERS.

THE Staffordshire County Council have provided 55,000*l.* for the extension of Cheddleton asylum.

THE Johannesburg Master Builders' Association have voted a sum of ten guineas for the purpose of providing prizes in building construction and geometry in the Technical Institute.

MR. J. H. CRITCHLEY, who was formerly a builder and contractor, died at St. Annes on Monday in his forty-sixth year. He was a member of the Accrington Town Council, and on committees was able to give the aid of his experience in several ways.

A MEMORANDUM on the state of the labour market in April has been prepared by the Labour Department of the Board of Trade, which shows that as compared with a year ago all the principal industries (including the building trades) show some improvement.

THE law and general purposes committee of the Bethnal Green Town Council recommend that it should be referred to them to consider as to the provision of suitable municipal buildings and to select and report as to the acquisition of a site.

THE May report of the Amalgamated Society of Carpenters and Joiners states that the membership of the organisation is now 67,210. Of these 3,291 were on unemployed benefit at the end of April, 1,726 on sick benefit and 1,849 on superannuation benefit. The unemployed proportion is 1,166 less than in March.

THE wages of building workmen in Dunfermline a year ago were reduced from 9½*d.* to 8½*d.* per hour, and those in the hewing department from 9*d.* to 8*d.* There have been negotiations between masters and men, and as a result of a conference a renewal of the old agreement was signed. The situation, it is said, has been greatly relieved by the emigration of masons to Canada.

THE annual report of the United Operative Plumbers' Association states that in 1905 the income of the Society was 29,610*l.* 13*s.* 3½*d.* and the expenditure 43,300*l.* 16*s.* 9*d.* The largest outlays were:—Strike and lock-out benefits, 13,949*l.* 8*s.* 7*d.*; out-of-work benefit, 7,414*l.* 8*s.* 6*d.*, and sick benefit, 5,357*l.* 10*s.* 8*d.* The funds in hand amount to 27,479*l.* 13*s.* 11½*d.*, while the total membership is down to 11,419.

A MEMBER of a Welsh Rural Council proposed at a meeting on Saturday that a request be made to the local authorities of Carnarvon, Llandulas, Colwyn Bay, Bangor and other places on the coast, to exercise their influence against using tiles for roofing dwelling-houses. It was said that some of the leading residents of the places named had expressed a desire to see houses roofed with slates, it being said of tiles that they were unhealthy. This proposal was, however, defeated by a majority.

THE Denbigh Town Council recently discussed what was described as a defect in the present drainage system of the town. About eight months ago a scheme was completed at a cost of 15,000*l.*, and at the time it was a most perfect drainage system. The sanitary committee now recommended that ropes for dragging a section of the drain be bought. A councillor said that for some time this portion of the drain was defective, and that the primitive way of putting ropes through it would make the Council the laughing-stock of the country. It was ultimately decided to communicate with the engineer on the matter.

THE Glasgow and West of Scotland Master Plumbers' Association state in their annual report that the membership now stood at 184, eleven new members having been admitted during the past year. It was stated that the employers in Glasgow and district had come to satisfactory terms with the Operative Plumbers' Association of Scotland regarding the working rules, and that provision had been made in the rules for their remaining in force for a period of three years, except with regard to wages. So far as wages are concerned, it has been arranged that, following the terms of agreement come to in October last between the masters and operatives connected with the Operative Plumbers' Association of Great Britain and Ireland at the close of the strike, either masters or operatives are to have

power to intimate a change by giving three months' notice prior to September 1 in any year, and in the event of parties failing to come to an agreement, all differences are to be referred to the Lord Dean of Guild as arbiter.

Building material is beginning to go forward in large quantities to San Francisco. In addition to numerous cargoes of cement despatched from Antwerp and Rotterdam, a correspondent of the *Birmingham Post* understands that fully a dozen steamers to convey cargoes of English cement have also been booked to load in the Thames. Besides cement, there are inquiries on the freight market for steamers to carry some 40,000 steel girders and accessories from Hamburg, Rotterdam and Antwerp, for which shipowners are asked to submit offers. These girders, presumably, are of German manufacture. So far there are no reports of steel orders placed in this country, but they are expected.

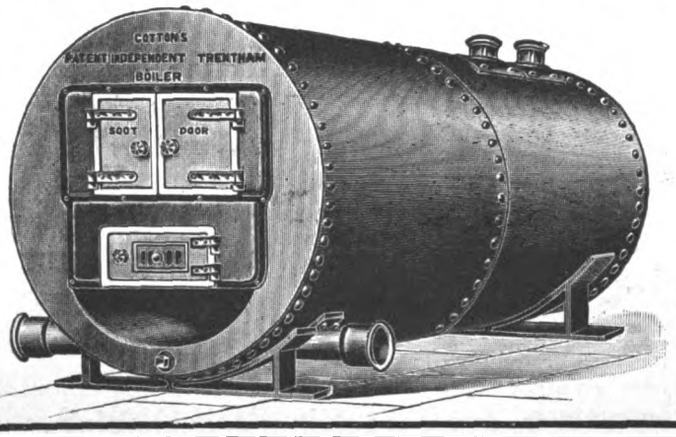
Mr. Meade-King, inspector of the Local Government Board, has held an inquiry at Frodsham into the application of the Runcorn Rural Council for sanction to borrow 4,500*l.* for works of sewerage for Frodsham. Mr. Diggle, engineer to the Council, explained that the application had arisen in consequence of the Manchester Ship Canal Act, 1904, under the provisions of which the canal company are granted powers to raise the height of the water 2 feet above the level sanctioned by the Act of 1885. In consequence of this the outfall of the Frodsham sewers would be submerged and rendered inoperative. The Council had a protective clause in the Act of 1904, and the Ship Canal had entered into an agreement under which the Council would carry out the necessary works, and the company contribute 7,500*l.* towards the cost of the works, and lay a cable and provide electric energy to pump the sewage to a syphon under the canal and into the river Mersey at Holpool Gutter, in the parish of Helsby. The total estimated cost of the scheme was 12,000*l.*

The House of Lords on the 15th inst. decided a claim under the Workmen's Compensation Act brought against Messrs. Dick, Kerr & Co. A workman employed by the contractors, who were the undertakers for the laying of lines of tramway, was injured while engaged in unloading tramway lines from trucks in a yard belonging to a railway company. The rails on being unloaded from the trucks were, by arrangement between the contractors and the railway company, stacked in the railway company's yard till they were actually required by the contractors. In the contract there was no provision as to where the rails should be stored. The railway company's yard was 700 yards distant from the place where the contractors were at the time laying the tram lines which constituted the "engineering work." The Court of Appeal dismissed the case. Lords Davey, Robertson and Atkinson held that the workman was not employed "on or in or about an engineering work," and, therefore, that he was not entitled to compensation. The Lord Chancellor and Lord James of Hereford dissented.

VARIETIES.

Mr. Andrew L. Reid, Bo'ness, has been unanimously appointed burgh surveyor and sanitary inspector for the burgh of Bathgate, N.B.

The new Vauxhall Bridge will be ready for opening to public traffic to-morrow (Saturday). The opening ceremony will be performed by Mr. Evan Spicer, the chairman of the London County Council.



Mr. B. T. Fendall, city engineer of Baltimore, will visit the leading cities of Europe this summer, under instructions from the Board of Estimate to investigate the street-paving methods abroad.

The waterworks committee of the Leeds Corporation report that the profits during the past year had been greater than ever before. A year ago there was a profit of 11,939*l.* This year 19,497*l.* is available for the relief of the rates.

A National Conference is to be held on June 26 in the Lord Mayor's parlour, Manchester, in connection with the movement in favour of improving the appearance of great industrial centres by efforts to cultivate trees, plants and flowers that will stand a certain amount of smoke.

The "Pall Mall Magazine" for June has an interesting article by Mr. J. P. Collins on Mr. Hemy and his works. A view is given of his floating studio, and there are other illustrations. Mr. Rider Haggard describes "Thebes of the Hundred Gates," and Mr. John Burns deals with "The Tangle of London's Traffic."

THE balance-sheet of the Coventry Corporation water-works undertaking for the twelve months ending March 31 last shows a net profit of 4,030*l.* The committee recommend the Council that 4,000*l.* of the surplus profits be devoted to the borough fund in relief of the borough rate.

THE Midland Reafforesting Association show in their annual report that in 1905 nearly 60,000 trees had been planted on an area of 34 acres at Moorcroft, where the nature of the ground was pit and furnace wastes and sand pits. Altogether 43 acres had been planted, and over 70,000 trees had been used upon pit wastes chiefly.

THE Glasgow Corporation sub-committee on the emission of black smoke recommend that the attention of the chief constable be directed to the frequent occurrence, through carelessness or otherwise, of fires in chimneys of dwelling-houses, with a view to the more stringent enforcement of the provisions of the Glasgow Police Act, 1866, dealing with such an offence.

THE Billericay Rural Council is removing the "simple life" huts in its district. Occupants of huts at Vange, Basildon and Pitsea have been summoned for occupying huts which were stated to be unfit for habitation. They were constructed of old boxes and mud. In some of them rabbits and chickens were running about on the bare ground. Closing orders were in all cases made.

DR. G. SNOWDEN, medical officer of health for East Ham, in his annual report for 1905 says it is highly desirable that every school should be thoroughly examined at least once or twice a year. In most of those visited the subject of ventilation did not appear to receive the attention it deserves, closed windows being the rule rather than the exception.

THE King, who laid the foundation-stone of the King Edward VII. Sanatorium in November 1903, has announced his intention of opening the completed building about the middle of next month. The buildings, which are finished and are now being furnished, are situated on Eastbourne Hill, Midhurst, Sussex. The sanatorium is designed to receive 100 patients, eighty-eight poor persons and twelve of the well-to-do classes.

THE Board of Rapid Transit Commissioners have completed a report to be sent to the advisory commission on finance for New York, in which it is stated that during the next five years the city will probably spend about 96,000,000 dols. for new subways. The total cost of all subways planned at the present time is 318,000,000 dols., divided as follows:—Manhattan, 175,000,000 dols.; Brooklyn, 97,500,000 dols.; Bronx, 46,000,000 dols.

THE Walton-on-the-Naze District Council have adopted a resolution declining to comply with a request from the Local Government Board for copies of plans and sections of the sewerage works in the town, unless the authority at Whitehall gave an undertaking to pay the expenses incidental to preparing the desired copies. The Council consider that they are not justified in spending the ratepayers' money for such purposes.

A MOVABLE pulpit has been placed in St. Cuthbert's Church, Carlisle. When not in use it stands in an obscure position under the organ gallery, and just before it is needed, by means of a handwheel and endless cable under the floor, it is quietly drawn into position immediately in front of the chancel, the steps of which it completely hides. With the chancel screen it then forms a complete barrier between the chancel and the nave. The pulpit has been made to the design of Mr. Martindale, architect, Castle Street.

THE Belle steamers announce that on Saturday, May 26, and Sunday, May 27, they will run a couple of opening trips to Margate, Ramsgate and back same day, leaving Fresh Wharf, London Bridge, at 9.30 A.M. The service will be resumed on Saturday, June 2. The regular daily service to Southend, Clacton and Walton begins on Saturday, May 26. The Felixstowe, Southwold, Lowestoft and Yarmouth service commences June 2.

AT Wigan, Mr. A. A. G. Malet, inspector of the Local Government Board, held an inquiry into the application of the Wigan Town Council for sanction to borrow 78,900*l.* for the purpose of sewerage, including execution of works in the urban districts of Lathom and Burscough and the townships of Parbold, Shevington and Wrightington, and the sum of 835*l.* in respect of the provision of a public lavatory in the Market Place, Wigan.

THE estates committee of the Birmingham City Council reports that after the payment of all expenses connected with the artisans' dwellings in Ryder Street and Lawrence Street there remains on the former property a balance of 74*l.*, equal to a ground rent of 8½*d.* per yard on the land occupied, and on the Lawrence Street block of 374*l.*, equal to a ground rent of about 1*s.* 0¾*d.* per yard. The income from the labourers' dwellings in Milk Street has only been sufficient to pay the outgoings on the cost of the erection of the dwellings.

THE Local Government Board have written to the Aberdeen Town Council requesting them to instruct the medical officer of health and sanitary inspector to make a special inspection when the herring fishing season is at its height of the housing accommodation provided for the workers engaged in the curing industry at the port, and to furnish the Board with a joint report upon the subject.

AT the Surveyors' Institution, on the 17th inst., Lieut.-Colonel Wellsted, umpire, commenced hearing arbitration proceedings to determine the compensation to be paid by the North-Eastern Railway Company to the Scarborough Corporation in respect of a piece of land, intended as a site for a refuse-destructor, required by the company for the purpose of increasing their siding accommodation. The land is situated at the north-east boundary of the borough, and the Corporation claim 23,000*l.* compensation.

A LOCAL GOVERNMENT BOARD inquiry has been held at Todmorden relative to the application of the Corporation for powers to borrow a further sum of 22,000*l.* for purposes of sewerage and sewage disposal. It was stated that an extensive sewerage scheme, with outfall works, had been forced upon the Corporation. Powers to borrow 18,744*l.* were obtained some years ago, and of this amount 17,453*l.* has already been spent. The works were only half finished, and properly to complete the scheme it was estimated 21,103*l.* more would be required. The Corporation sought to borrow 22,000*l.* to be on the safe side.

NEW sewage disposal works on the bacteria principle, constructed by the Corporation at a cost of 25,000*l.*, have been opened at Newcastle-under-Lyme. The completion of these works is an important step towards the purification of the Trent, the pollution of which has resulted in the abandonment of Trentham Hall by the Duke of Sutherland. Mr. J. E. Willcox, Birmingham, engineer of the works, said that Newcastle was the first place to obtain the sanction of the Local Government Board to the treatment of its sewage by the bacteria system without any land irrigation.

THE annual report of the Manchester Steam Users' Association states that there were at the end of last year 2,159 members. The number of boilers under inspection

Digitized by Google

were 8,312, and the subscriptions, &c., amounted to 17,553*l.* These figures were higher than in any previous year, and the net surplus in favour of the year was 1,299*l.* There is a reserve fund of 33,250*l.* A grant of 100*l.* is made to the National Physical Laboratory to assist in experimental research. No explosion occurred during the year of any boiler under the Association's care.

The Local Government Board recently sent a letter to the Hanley Town Council with respect to a statement in a communication from the Council to the effect that at the present time there were 524 private dwelling-houses for the working classes in the borough unoccupied, and asking to be furnished with the observations of the Council thereon. In their reply the Council attribute the cause of the dwellings remaining unoccupied to speculating builders continuing to erect houses of the smallest description permitted under the by-laws in greater supply than the demand warranted; to the bad trade in recent years; and the owners of small property were disinclined to spend money to put their houses in a good sanitary condition.

The annual dinner held in connection with the junior meetings of the Surveyors' Institution took place at the Trocadéro Restaurant on Wednesday, May 16, the chair being taken by Mr. C. P. Knowles. There was a large attendance of members, and the invited guests included Messrs. Howard Martin, A. R. Stenning, E. B. l'Anson, H. Chatfeild Clarke, G. Langridge, J. H. Townsend Green, M. C. Elwell, W. H. Elwell, H. Courthope Munroe, W. A. Hawes, A. Goddard (secretary of the Surveyors' Institution), S. Cutler and Adam Hunter. During the course of the evening a presentation was made to Mr. Sydney A. Smith, the hon. sec., by the members of the committee to commemorate his term of office. A musical programme was carried out by the members of the Institute.

Mr. John Burns, as president of the Local Government Board, has issued a return showing how the Small Dwellings Act of 1899 has been applied. The figures include transactions down to the 7th instant:—The number of advances by the London County Council is 10, and amount to 1,890*l.*; loans sanctioned by the London County Council to Metropolitan Borough Councils to enable them to make advances number 23, and amount to 4,345*l.*; total for London is therefore 33 advances and 6,235*l.*; total for England and Wales (excluding London), loans sanctioned by the Local Government Board is 420 advances and 96,331*l.* The figures are subject to slight qualifications, but the Local Government Board have no particulars as to the total number of applications for advances made to metropolitan borough and other councils, or as to the number refused by them.

A palatial private and residential hotel, with public restaurant de luxe, is to be erected on the site of Wellington House, Buckingham Gate, recently vacated by the War Office. The building will have a frontage of 177 feet to Buckingham Gate, with a return frontage to York Street of 144 feet. The public restaurant will be entered from the apex of the building—the site being triangular—and the hotel proper from Buckingham Gate. The fittings and appointments will be of a sumptuous character, and the hotel will be provided with three electric passenger lifts, goods and service lifts. The elevations will be carried out in cherry-red bricks and terra-cotta dressings and enrichments, with "dragged" surface. The cost of scheme—including the site—will exceed 100,000*l.* Mr. Charles Gray, of Kensington and Shepherd's Bush, is the contractor for the works, and Messrs. Palgrave & Co. have been appointed architects. The work is to be commenced immediately.

The Crewe education committee have adopted a strong resolution of protest against the action of the Local Government Board in fixing a period of thirty years for repayment of a loan of 21,000*l.* in connection with a new school. Considerable dissatisfaction was expressed that the repayment of the loan had not been allowed for a longer period. A deputation was appointed to wait upon the President of the Local Government Board to explain to him the special circumstances of Crewe, and to ask for the loan to be spread over sixty years; but Mr. Burns declined to receive a deputation, adding that he had given the matter very careful consideration, and did not think the circumstances such as to justify the period of extension.

The waterworks engineer of the Southampton City Council embodied, in a report to the water committee, a recommendation that a charge be levied for water supplied for building purposes. The committee agreed, and resolved that the charges recommended (8*d.* per 1,000 gallons, to be estimated by meter, with a minimum price of 10*s.* per house) be made in connection with all applications received

after May 1. In the course of the report, the waterworks engineer stated that the Corporation did not make any profit, but rather sustained a loss, upon water supplied to dwelling-houses. That loss was, of course, increased by the giving of water for building such houses without any fee being demanded. It was not the custom to supply water free in such cases in other towns, and he considered that the Council should make a charge for it as for water used for other trade purposes.

WE mentioned last week the dust prevention experiments which have been carried out in the Northwich urban district by means of a waste product from the Winnington Chemical Works, and described as calcium chloride liquor. Mr. Brooke, the Council surveyor, has prepared a report, in which he says the experiment was first tried for fourteen days over three lengths of main road. The first length was 900 square yards by 8 yards, the second 1,666 by 9 and the third 1,556 by 8 yards. The first length of road for fourteen days' treatment cost 18*s.* 3*d.*, as against 2*l.* with water, the second 1*l.* 16*s.* 7*d.*, as against 4*l.* 3*s.* 7*d.*, and the third 1*l.* 16*s.* 4*d.*, against 8*l.* 6*s.* 8*d.* The effect of the liquor seems to be to change the gravity of the dust particles, preventing them being blown about either by wind or motor cars. The roadway seems to be bound, and in dry weather has a good surface. The liquor has a characteristic of absorbing moisture, and each night regains an amount of moisture, which prolongs the effect of the treatment. This reviving influence was apparent for fully three weeks after the expiration of the fortnight's treatment. During wet weather there is a tendency for the surface to work off in layers, but it quickly dries and sets remarkably hard.

THE water committee of the Birmingham Corporation state in their annual report that they have for some years been aware that the scale of charges for service laying had become inadequate to meet the expenses entailed in laying and maintaining water services. The old scale was introduced in the year 1897. Since then there has been throughout the district a large increase in the length of roads covered by wood and other expensive pavings. In view of this, and particularly of the large extensions of tramways, the committee felt that the time had come when a revision of the scale of charges was imperative. This decision was forced upon them by the fact of a considerable loss in the service-laying department for the first half of last year, a loss now brought up to 797*l.* on the whole year's working. The committee accordingly gave notice of a new scale to come into operation at the beginning of April 1906, in which the charge for a lead service of ½-inch diameter within a radius of two miles of the Council House has been increased from 38*s.* to 50*s.*, the charges for larger services and greater distances being increased correspondingly.

THE growing spirit of enterprise animating the great British railway lines finds a striking illustration in the issue of a seasonable publication by the Great Central Company, of an illustrated guide to the picturesque suburbs of London, with list of seaside, farmhouse and country lodgings and hotels located at the many delightful spots and holiday resorts served by this company's system. The book is bound in a very attractive and pleasing cover. In the first section is a chapter entitled "Live in the Country," which graphically describes the area of charming country, rich in historical associations and most desirable for residential purposes, lying in the north-west between Hampstead Heath and the Chiltern Hills and now brought within easy access of the Metropolis by the opening of the company's new suburban line. Most useful information as to where to go, how to get there, and where to stay, forms the concluding portion of the Guide and should be materially helpful to those who, at this time of the year, are contemplating their holidays. The great demand for this beautifully illustrated guide has necessitated its publication in two editions, and copies of the first can be obtained at any of the company's stations and town offices, or will be sent, post free, on receipt of postcard to Publicity Department, 216 Marylebone Road, N.W.

THE Derwent Valley Water Board have published a report on the work of the Board for the period January 1 to March 15, 1906. In the eleven weeks 43,125 tons of stone were quarried at the Bole Hill quarries, 10,442 cubic yards of excavation and 7,489 cubic yards of masonry were done at the Howden dam; and at the Derwent dam 6,943 cubic yards of excavation and 11,705 cubic yards of masonry. During the same period the Board have decided to construct the length of aqueduct between the Howden and Derwent

CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

dams, 1¾ mile, by administration, and the cut-and-cover portion of the work will be carried out simultaneously with the construction of the new road from the Derwent dam northwards. The number of workmen engaged on March 15 on the various works of the Board was 1,473, and of these 1,079 were in the direct employ of the Board.

The committee of representatives of the public bodies interested in the proposed infectious diseases hospital at Leuchars, in Cupar, have examined the twenty-five competitive plans submitted, the estimated cost ranging from about 4,000*l.* to 8,000*l.* The committee selected five plans at estimates ranging from 3,600*l.* to 5,000*l.*, to be sent to Mr. Morran, city architect, Edinburgh, the adjudicator. According to the specifications, the plans were to provide for sixteen beds—one pavilion of eight, another of six, two beds for observation purposes, accommodation for four nurses in two rooms, and also administrative block, ambulance shed, washhouse, laundry, mortuary, &c. The author of the design placed first is to be the architect, the second is to receive a premium of 10*l.* and the third 5*l.*

SAFETY IN THEATRES.

The Association of German Fire Department Chiefs, through a committee appointed at a meeting in Munich in 1904, has adopted at the 1905 annual meeting, held in Bremen, some rules and regulations intended for the better protection of life in theatres.

The following, says the *American Architect*, are the chief requirements of the rules as regards both new and old theatre buildings :—

(*a*) The stage must be separated from the auditorium by thoroughly fire and smokeproof means.

1. In the case of new buildings, two iron curtains, operated hydraulically, are required ; in the case of existing buildings one iron fire-curtain, and besides this a reinforced asbestos curtain (such as the one of "Reichel") are called for.

2. An open-pipe sprinkler apparatus or water-curtain for the protection of the fire-curtains should be installed.

3. The stage must be separated from the auditorium by means of double fireproof brick walls, so arranged that there is a sufficiently wide passage between the two walls for men to stand and to pass. This passage is intended to be so planned and arranged that all required apparatus for raising and lowering the fire-curtains, for operating the curtain-sprinklers, the ventilating skylights over the stage, the automatic fire-alarms, the fire-signalling apparatus, &c., can be placed and operated from it by the special officers there stationed in charge of such appliances. The space must be well ventilated from above and must be proof against gases of combustion from a stage fire. From this passage at least one unencumbered exit directly to outdoors must be provided. It must also be possible to reach from the passage all parts of the stage.

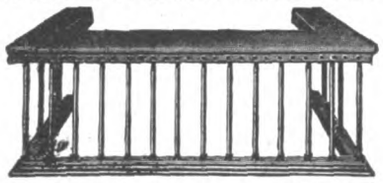
Note.—The fire-curtains might also be operated successfully electrically, but whatever the motive power, auxiliary hand apparatus for working the curtain should, under all circumstances, be provided.

(*b*) Correct arrangement and operation of a sufficient system of ventilation of the stage and auditorium to efficiently provide for the escape of smoke and gases from a stage fire.

1. It is recommended to omit from the ceiling of the auditorium any special ventilating ducts.

2. The vent-shafts or flues in the roof over the stage must be of such dimensions that their free sectional or effective areas are at least 2 per cent. of the superficial area of the stage larger than the sum or aggregate of all door-openings provided in the auditorium above the level of the parquet. In no case shall the combined area of the stage ventilators or flues be less than 10 per cent. of the floor area of the stage.

3. The opening of the ventilating flues in the stage roof should not be accomplished automatically, but a single operation of a controlling lever in the hands of the safety officer in the passage should accomplish it at his discretion.



4. It is recommended to arrange such windows as may be located in the upper part of the stage in such a manner that they may be opened and closed from the stage.

5. The upward and outward movement of air is to be accelerated by means of exhaust fans placed above the stage, arranged so that they can be set in action by a simple movement of a lever from the stage.

(*c*) Sufficient fire-extinguishing apparatus must be provided.

Digitized by Google

1. A system of automatic sprinklers should be provided covering the entire area of the stage, including the rear stage and also including the spaces under the fly-galleries and the rigging-loft.

2. The piping for the automatic-sprinkler equipment should consist of copper; the pipes should be run at right angles to the wings.

3. The automatic-sprinkler equipment should have two independent sources of supply; but if there is only one street main available, provision should be made for the storage of a large reserve volume of water.

4. No branches for domestic water use should be taken off the mains serving the sprinkler equipment. Nor should the sprinkler tank be used for other than fire purposes.

5. In addition to being operated from the stage, the sprinklers should be operated from some safe place outside of the stage.

(*d*) Improvements in theatre exits.

1. The exit ways from the auditorium to the outside of the building should be so arranged and planned that they become wider as they get nearer to the exit doors.

2. In dimensioning the width of doors, stairs, passages, &c., the number of persons allowed per foot of width must be reduced in proportion to the height of the tier above the street level.

3. The stairs which are wider than required for two persons walking side by side must be provided with centre rail, and the centre rail must be a double one, so arranged that not more than two persons can walk side by side in each half of the width of stairs.

4. As much as possible the public should be made to use all side exits after each performance. No so-called "safety" exits should hereafter be provided.

5. Winding stairs of any kind should be prohibited.

(*e*) Provision for sufficient auxiliary lighting of stairs, passages and exits.

In new theatres the auxiliary lighting of exits and passages should be accomplished by means of electric incandescent lamps. The lights should be distinguished by red glass, and each lamp should be supplied from separate accumulators.

(*f*) Fire-watch.

1. The fire-watch during performances should not be taken from the theatre employés, but should consist only and always of specially detailed members of the regular fire department.

2. The fire-watch should consist of a sufficient number of trained firemen to operate properly all the safety apparatus enumerated under (*a*), and located in the passage between the two walls dividing the stage from the auditorium.

3. The officers and men from the fire department detailed for the fire-watch on the stage and in the auditorium should not only have charge of the fire alarm, the fire-extinguishing appliances and safety appliances, but they should also be invested with fire police authority.

One more requirement might have been mentioned, namely, the constant control and inspection of all theatres by the fire department. Occasional expert inspections by special theatre fire commissions are not in themselves sufficient.

TECHNICAL INSTRUCTION IN IRELAND.

THE report of the Department of Agriculture and Technical Education in Ireland states that the chief work of the department may be grouped under two heads:—(1) The organisation of a system of instruction in day secondary schools in such subjects as experimental science, drawing, domestic economy and manual instruction; and (2) the organisation of technical instruction, properly so-called, under local authorities. With regard to the first, the department have found it necessary to organise the teaching in such subjects in secondary schools, because a sound system of technical education can be based only on the foundation laid in the primary and secondary schools. The system established by the department involved several features—new so far as Ireland is concerned. Systematic practical instruction in laboratories became a *sine qua non*; grants were paid on the results of inspection only, and no grants were paid except the teachers were recognised by the department as qualified. Four years have elapsed since the inauguration of the system, and it is now possible to form a judgment of its suitability to Irish secondary schools. Notwithstanding the difficulties in the way of introducing

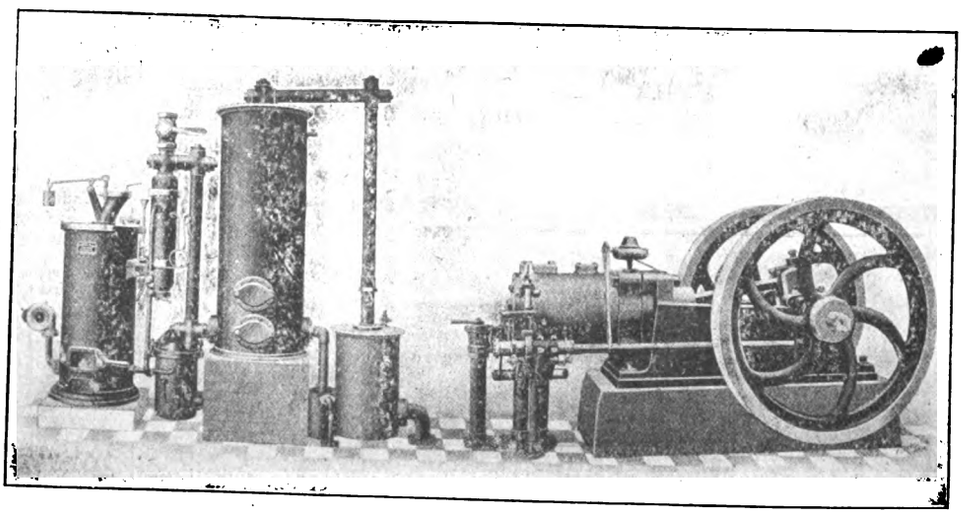
such a system, it has become an essential part of the curriculum of almost every secondary school in Ireland, and so far as it is possible to judge at present, it is taking the position in secondary education which it was designed to take.



The report states that no part of the work of technical instruction has developed more rapidly or steadily than that of the urban technical schools. Most of the urban centres of Ireland seized the opportunities offered by the Act of 1899, and established technical schools. This work proceeded with great rapidity. In the early part of 1901 there was, outside the county boroughs, scarcely a technical school in Ireland. Since then, however, a large number have been established, and the report gives a list of over thirty urban districts which have large and successful schools of this class. The county schemes and the combined urban and county schemes are also working satisfactorily. The number of students in urban districts has increased from 11,465 in 1901-2 to 17,737 in 1904-5. The greatest necessity in urban centres at present is suitable and permanent buildings in which to continue and develop the work.

A CLAIM FOR HEATING.

Judgment was delivered by Mr. Justice Gibson in the Dublin Court in the case of John King & Co., Liverpool, *v.* Richmond District Lunatic Asylum committee of management, which occupied fourteen days in hearing. The plaintiffs claimed 2,999*l.* 12*s.* 11*d.*, alleged to be due for work done and materials supplied in connection with the heating, hot-water supply and ventilation of Portrane Auxiliary Asylum, for which they were contractors. Defendants counterclaimed for 5,000*l.* for alleged defective workmanship and unsuitable apparatus supplied by the plaintiffs.

Mr. Justice Gibson said the original claim was for 15,830*l.*, under the contract dated April 6, 1898, but in the course of the hearing this had been narrowed down and the questions which arose in the action were—Whether the plaintiffs were responsible for the unsuitable water supply, whether they should have supplied automatic gear for the calorifiers, over what term the period of guaranteed maintenance extended, what extras should be allowed, what was the plan of the ventilators, and what was the effect of the defendants retaining 500*l.*? On the question of water supply he held that the defendants were responsible. On the question of the automatic gear he found that the plaintiffs should put in such gear. He also held on the question of the duration of the guarantee that the defendants were entitled to keep the retention money for twelve months after the completion of the contract. As to extras, his ruling would be that the architect was the supreme and final judge. He further held with regard to the work done, and disallowed by the architect, that the plaintiffs were entitled to eight items, amounting to a total of 62*l.* 12*s.* 6*d.*, also that they were entitled to 80*l.*, which was kept back in addition to the retention money, and that for firemen and trimmers plaintiffs were entitled to 531*l.* 5*s.*, making a total of 683*l.* 17*s.* 6*d.* On the counterclaim questions arose as to defects in the plant, and whether they were due to careless working; also whether the calorifiers, automatic gear and ventilators were proper. As regards the calorifiers, he held they were faulty in construction, and he allowed defendants 150*l.*, which was the amount claimed. On the matter of the automatic gear, he found for the plaintiffs, and allowed 96*l.* As regards the ventilators, he considered that the work was not done in a satisfactory way, and that the contract was not followed, and he allowed the defendants a sum of 300*l.* For the fracture in one of the mains he allowed 6*l.* He found for the plaintiffs on the counterclaim in regard to the fan motor, and also with regard to the tanks with their inlets and draw-offs. That made a total of 552*l.* in favour of defendants, as against 683*l.* 17*s.* 6*d.* in favour of the plaintiffs. The sum of 612*l.* had been paid into Court by the defendants. As regards the retention money, he held that as the defendants had succeeded in recovering damages for defects in the carrying out of the contract, they were not entitled to keep back the 500*l.* That would reduce the sum to which they were entitled by 500*l.*, and the sum recoverable by the defendants on their counterclaim would therefore be 52*l.* Such a result, he thought, would be disappointing to both sides. With regard to costs, he thought it would be impossible for the taxing master to apportion them, and he suggested that both sides should give the matter their further consideration with a view to an arrangement.

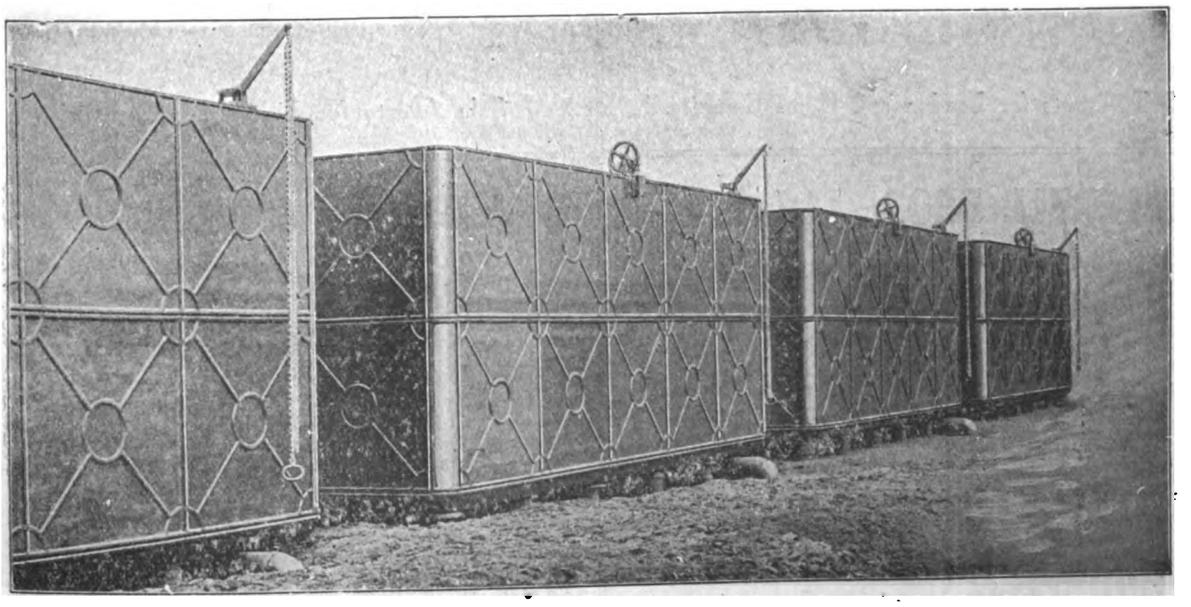
NEWMAN'S PATENT INVINCIBLE,
With and Without Pneumatic Check.
Will hold Door **rigidly to centre,** but diminishes in power as Door is opened, allowing comfortable passage through.
The **Best** Spring to close Door **against wind pressure,** and the most suitable for Banks, Schools, and other public buildings. Made in sizes to suit all Doors.

Made solely by W. NEWMAN & SONS,
DOOR SPRING MAKERS AND BRASSFOUNDERS, **HOSPITAL ST., BIRMINGHAM.**
ESTABLISHED OVER 100 YEARS.

AWARDED SILVER MEDAL, SANITARY INSTITUTE, 1902.



THE BRITISH SANITARY CO.'S NEW AND IMPROVED SELF-ACTING EARTH CLOSET.

HIGHEST AWARDS:
Birkenhead, 1881; Newcastle-on-Tyne, 1882; Glasgow, 1883; Dublin, 1884; Plymouth, 1885; Edinburgh, 1886; Glasgow, 1887; Haddington, 1892; Liverpool, 1894; Newcastle-on-Tyne, 1896.
For Simplicity and Efficiency their Closet stands alone.
Medal from the Society of Architects, London, for superiority of workmanship and materials used in manufacture of Closets.

ITS ADVANTAGES ARE:—
1ST. The simplicity, strength of the mechanism, and non-liability to get out of order. 2ND. It is self-acting. 3RD. The effective distribution of the deodorising material thoroughly covers and absorbs all offensive matter and smells. 4TH. The large capacity of the containing magazine holding the earth or other deodorising material. 5TH. The very moderate price it can be sold at as compared with other closets not even possessing the above advantages.

PRICE LIST AND FULL PARTICULARS SENT ON APPLICATION TO

VELURE

VELURE

WHAT WE SAY

VELURE is a perfected JAPAN PAINT, superseding varnish, with remarkable spreading, elastic, and weather-resisting properties. One coat equals two of paint and one of varnish, and wears twice as long. 120 colours. Any shade matched. Sanitary, washable.

Will not crack, chip, peel, blister, or fade.
SAVES TIME, LABOUR, VARNISH, AND MONEY.

WORTH | ONE GALLON WILL COVER ABOUT 90 SQUARE YARDS | TRYING

WHAT CUSTOMERS SAY

ONE OR MORE FRESH LETTERS WILL APPEAR EACH TIME.

Satisfaction leads to Recommendation

Having previously used the Velure I can testify that the results are very satisfactory. I have recommended it to my friends.

A. PAGET,
Hartwell, King's Road,
March 13, 1906. Cheltenham.

We have hundreds of Testimonials similar to this.

YORK.—June 6.—For the erection of two cottages and office at Naburn Locks. Deposit 1*l.* 1*s.* Mr. A. Creer, city architect, Guildhall, York.

A DOCK, which is probably the highest in the world, has been completed at Port Florence, on the Victoria Nyanza, at an altitude of 3,800 feet above sea-level. The dock is intended to accommodate the Nyanza fleet plying on the lake in conjunction with the Uganda Railroad. It measures 250 feet in length by 48 feet wide and 14 feet deep. It was excavated out of the solid rock by native labour, occupied twelve months in construction and cost 4,000*l.*

A NEW LIFT.

THE Penrose "Safety" express electric lift can now be easily tested by architects and projectors of blocks of flats and offices, for one has been fitted in the new building erected by Messrs. Gamage, in Holborn. There can be no doubt about the express rate of motion, for if necessary the six storeys of the building can be traversed in five seconds. The "Safety" is also a fitting term, for it has been ascertained by actual experiment that in the remote contingency of a failure the cage can be stopped before proceeding further than 1½ inch. On a trial a still less space was passed through. However fast the Penrose lift may travel the occupants of the cage are not affected, and stoppage does not cause the slightest shock. Such an appliance must win the favour of tenants of the building and their visitors. The lift examined is one of six supplied to the same building.

FOR those desirous of spending the Whitsuntide holiday at the many attractive resorts in the Midlands and the North, ample and admirable facilities are afforded by the Great Central Railway Company from Marylebone and suburban stations. By this company's picturesque and comfortable route express excursions at most moderate fares will be run to all the principal towns in the Midlands, North of England, North-East and North-West Coast watering-places and Scotland. Special fast trains will leave Marylebone at 12.5 midnight on Friday and Saturday, June 1 and 2, and several additional expresses will be run at convenient times on Saturday, June 2. The information has been concisely tabulated in the form of an A B C programme giving times of departure, fares, dates and times of return, &c., for any station (alphabetically arranged) which can be seen at a glance. Copies of this guide may be obtained free at Marylebone and suburban stations, town offices, or agencies.

TRADE NOTES.

THE whole of the sanitary fittings in the Ritz Hotel have been supplied by Messrs. Doulton & Co., Ltd., and are all of special design. The lavatories and baths are in white glazed fireclay, and the closets, a new pattern with valve, designed so as to be fixed without any enclosure. There is a bath, lavatory and closet to each suite of rooms.

WE have been requested to announce that Messrs. Farnham, Ltd., of 39 Victoria Street, Westminster, are removing to larger offices at Caxton House, Westminster, which will be their address as from June 6. Their telephone number and telegraphic address will remain as before.

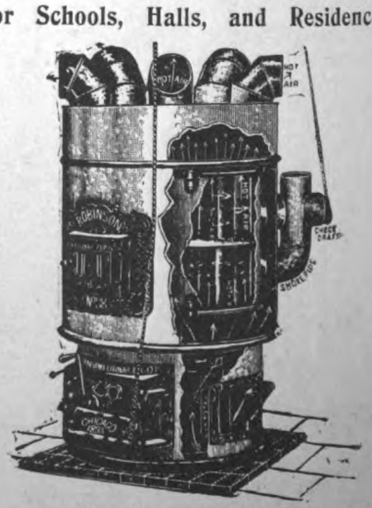
THE contract for heating, ventilating and hot-water services in the extensive premises in Wigmore Street, which are being built by Messrs. Debenham & Co., has been entrusted to Messrs. Henry Hope & Sons, Ltd., of Birmingham, the consulting engineers being Messrs. Talbot & Stevenson, of Westminster.

MESSRS. JOYCE & Co., Whitchurch, Salop, have received instructions to supply a new quarter clock with four dials and three bells for Shrewsbury schools, to replace that recently destroyed by fire, and which was erected by this firm some twenty-three years ago. They have also in hand a large striking clock with two dials for Drayton Bassett Church, Tamworth.

A USEFUL little work at the small price of 1s. is published by Messrs. Wm. Rider & Son, the proprietors of the *Timber Trades' Journal*. The title of the book is "Joiners' Machines and How to Work Them," by T. R. Groom, and to users of this class of machinery the work would undoubtedly be of benefit.

WE understand that the British Uralite Company, of London, have just completed arrangements with Messrs. Parnall & Sons, Ltd., of Narrow Wine Street, Bristol, to undertake their agency in Bristol, West of England and South Wales. Messrs. Parnall & Sons, Ltd., are known throughout the world as shopfitters and manufacturers of all kinds of weighing apparatus. They have arranged to hold stocks of Uralite in Bristol and various centres, which will enable builders to obtain supplies promptly.

THE Pulsometer Engineering Company have received the following letter, dated May 23, 1906, from the proprietors of large coal and iron mines in North Ireland:—"Referring to our recent sinking operations, we beg to say that we used two of your pulsometer pumps—a No. 4 and a No. 6—and we were about four months pumping water sand; the height of the lift varied from 40 feet to 70 feet, and steam pressure 60 lbs. per square inch. The pulsometers kept men constantly shovelling thousands of tons of sand from the drain into which the sand and water was deposited. The pulsometers were working very satisfactorily night and day."



A NEW illuminated chime clock has been erected in the tower of the Wesleyan church, Chapeltown, near Sheffield, to commemorate its fifty years jubilee. The clock was made and erected by Messrs. Wm. Potts & Sons, clock manufacturers, of Leeds and Newcastle-on-Tyne, who are now making a new illuminated clock striking the hours and showing the time on three external dials, as a memorial at the Wesleyan church, Yarm Road, Stockton-on-Tees. Both of the above clocks are from the designs of the late Lord Grimthorpe. Messrs. Wm. Potts & Sons are also making a large clock and chimes for Ripon Cathedral, Batley Corporation Carnegie Free Library, Ormsby Church, Lincolnshire; Hunslet parish church, near Leeds, and Sunderland Corporation, co. Durham.

THE settings of the two plays at the Criterion Theatre—"The Whirlwind," a tragedy of modern life, and "Undine," a fanciful drama-play—show contrast. The latter represents a fisherman's cottage containing a spinning-wheel and an old dresser. But "The Whirlwind" opens in a well-appointed drawing-room, furnished in gilt and brocade, with elegant cabinets and screens. The boudoir is charming, with satin-wood tables and cabinet, blue and white striped sofa and high-backed settee; and Hugh Carlton's flat in Mount Street, containing old high-backed chairs of carved black oak and capacious easy chairs, &c., carries out the suggestion of an ideal flat for a wealthy bachelor. Messrs. Oetzmann & Co., of 52-79 Hampstead Road, W., are responsible for the furnishing of these scenes.

ELECTRIC NOTES.

A LOCAL GOVERNMENT BOARD inquiry has been held at Colne with reference to the Council's application for powers to borrow 5,300*l.* for electric lighting purposes. There was no opposition.

A SYNDICATE of Toronto capitalists are commencing to build an electric railway from Rochester, in the State of New York, to Lockport, the capital of Niagara County, at a cost of two millions of dollars.

THE Battersea Borough Council have appointed Mr. Arthur Frederick Bond, of Hounslow, as their chief electrical engineer, at a commencing salary of 500*l.* per annum.

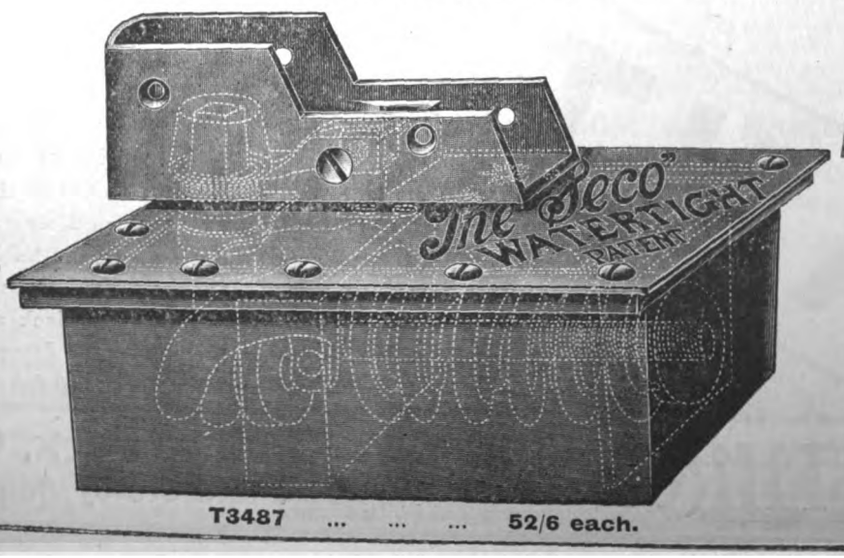
THE Oxford City Council discussed at considerable length at a special meeting on Wednesday a report of the tramways committee, and passed a recommendation by 34 to 21 to lease the present undertaking by public tender for the purpose of electric traction.

THE Liverpool Corporation adopted by a majority a recommendation of the tramways and electric power and lighting committee that the resident electrical engineer be authorised to supply electric motors to consumers on the hire-purchase system for a period not exceeding five years.

AT a recent meeting of the Pontypool Council the surveyor stated that several horses had taken fright owing, it was alleged, to the electric current from the cable catching their shoes and throwing them on their haunches. A councillor said the streets were "full of current," and "the town might be blown up at any moment." The leakage had been going on for months, and during the last few weeks the Electricity Company had opened up several roads and the main street in twenty places to locate the mischief.

THE Borough Polytechnic Institute have arranged four summer courses of six lectures, each in connection with their physics and electro-technical department, commencing on May 31. The first will be by Mr. J. Henderson, who deals with "Elementary Principles of Electric Lighting in relation to Building;" the second, by Mr. H. S. Saunders, on "Colour;" the third, by Mr. H. Nutton, on "The Design of Electrical Fittings;" and the fourth, by Mr. Nutton, on "Electrical Calculations."

THE lighting committee of the Dublin Corporation proposes to reduce the charges for electric current utilised to drive machinery or for heating purposes for business places. This applies to all establishments using current in the manner described. In the case of workshops run ten hours per day the price is 1.2 pence, or one penny and one-fifth per unit. An electric unit is to a horse-power as 1,000 is to 746, so that the Corporation now proposes to sell current equal to a horse-power for less than a penny. To be strictly accurate, it will be sold for .895*d.*, or close upon nine-tenths of a penny.



THE annual report of the manager of the Southport Corporation tramways (Mr. T. Kendrew) shows that the traffic and other receipts, excluding rent, &c., from the tramways company, amounted to 17,230*l.* 10*s.* 3*d.*, or 460*l.* 14*s.* 5*d.* less than in the previous year, which makes a deficit of 654*l.* "If," adds the manager, "the tramways are to be a success, the question of Sunday running will have to be carefully considered in the future. The interest and sinking fund charges amount to 7,135*l.*, and the two items alone cost us 19*s.* 10*d.* per day taking the year through, and as the cars do not run on fifty-two days of the three hundred and sixty-five (which is the usual number for tramways), this is equivalent to paying a rent of 1,014*l.* whilst the undertaking is idle.

THE Greenwich electricity generating station was opened on the 26th ult. by the chairman of the London County Council. The Council began the electrification of their tramway system with the Tooting-Westminster route, opened in May 1903. Nearly thirty miles of line are now electrified, and almost as much more will be ready by the end of the year. Hitherto the necessary power has been obtained from companies, but when the station is at work the cost of electricity for traction will be diminished by half. The station is being erected in two portions, of which the first was ready, having been begun in the autumn of 1902. The second portion will be completed by 1908. The part now ready will supply power for 800 cars; with the second portion there will be power for 1,500 cars. The station will cost about 1,000,000*l.*, and it will develop 34,000 kilowatts, working 1,500 to 2,000 cars, with a horse-power of 52,000.

PROFESSOR SIR ALEXANDER KENNEDY, consulting engineer, and Mr. F. A. Nevington, resident engineer to the Edinburgh electric light undertaking, have prepared a report on the present condition of the machinery and plant, its probable life, and the provision which ought to be made for the renewals of plant and machinery. After discussing in detail the various questions involved, the reporters concluded by expressing the hope that the Council might, out of the revenue of the undertaking, increase, as soon as possible, the reserve fund to its statutory limits—that is, 10 per cent. on the total capital expended—and thereafter keep it up to this limit. And in view of the uncertainty of the life of certain portions of the machinery and plant, and particularly as to the durability of the insulation of the mains, they had to express the very strong opinion that it would only be a reasonable measure of precaution to form a depreciation fund—5 per cent. on the total capital expended—as soon as possible after the reserve fund had reached the statutory limit. And if it should turn out, fortunately, that they had not to draw largely on the reserve before the bulk of the borrowed capital was repaid, the Corporation as undertakers and the public generally would obtain the full advantage of their policy in that the ultimate renewals could be largely carried out as they became inevitable from reserve, and without becoming a charge upon the rates or the necessity of further borrowing.

THE following awards have been made by the Institution of Electrical Engineers:—One Salomon's scholarship, value 50*l.*, to Mr. R. G. Jakeman; two David Hughes scholarships, value 50*l.* each, to Mr. A. Kinnes and Mr. G. F. O'Dell; the Institution premium, value 25*l.*, to Mr. V. A. Fynn, for his paper "A New Single-phase Commutator Motor;" the Paris Electrical Exhibition premium, value for this year 20*l.*, to Professor A. Schwartz and Mr. W. H. N. James, for their paper "Low Tension Thermal Cut-outs;" an extra premium, value 10*l.*, to Mr. W. J. A. London, for his paper on "The Mechanical Construction of Steam Turbines;" an extra premium, value 10*l.*, to Mr. D. K. Morris and Mr. G. A. Lister, for their paper on "The Eddy Current Brake for Testing Motors;" an extra premium, value 10*l.*, to Mr. R. N. Tweedy and Mr. H. Dudgeon, for their paper on "The Overhead Equipment of Tramways;" an original communication premium, value 10*l.*, to Dr. W. E. Sumpner, for his communication "New Iron Cored Instruments for Alternate Current Working." The Fahie premium has not been awarded this year. Student's premiums have been awarded to Messrs. A. G. Ellis, H. W. Taylor, F. C. Prentice, J. S. Westerdale and W. Browning.

BUILDING AND BUILDERS.

THE contract for the new motor houses about to be erected at Hendon for Messrs. Schweppes & Co., Ltd., has been placed in the hands of Messrs. Patman & Fotheringham, of Theobald's Road, London, W.C.

MR. JOHN D. M'JANNET, Woodlands, Stirling, the arbiter appointed by the master and operative masons in Stirling to determine upon an application to have the rate of wages reduced from 9*d.* to 8½*d.* per hour for the year commencing June 1, has issued his award, in which he finds the reduction claimed to be justified.

THE Metropolitan Asylums Board have approved plans for the adaptation of the remaining portion of the buildings of Belmont asylum for the accommodation of imbecile patients. The plans provide for the accommodation of 523 male patients, and the estimated cost of the alterations and additions is 69,500*l.*

THE Hampstead Garden Suburb Bill passed the committee stage in the House of Commons. This Bill authorises the Hampstead Great Suburban Trust to lay out land adjacent to Hampstead Heath "on principles which will not detract from the public advantages accruing from the addition of the area to Hampstead Heath, and will enable a residential area to be created for persons of all classes, with special amenities and facilities for persons of the working classes." Public gardens, recreation grounds and open spaces for the public use of residents are to be provided, and the trust will also be empowered to erect and maintain public buildings. The profits of the trust are limited to 5 per cent.

THE Staffordshire County Council have decided to provide the sum of 55,040*l.*, and to place the requisite funds at the disposal of the Cheddleton asylum sub-committee, and

Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied. It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

The ANTHROL COMPANY, Kinning Park, GLASGOW; and 6 Crosby Square, LONDON.

Digitized by Google

to order the county treasurer to pay to the treasurer of the Cheddleton asylum such sums from time to time as will be required to meet the actual expenditure, when ordered by the said sub-committee, not exceeding the following amounts for the undermentioned purposes, viz.:—Contractors' tender, 31,000*l.*; hot and cold-water supplies, fire hydrants inside and outside, heating and ventilation, 4,140*l.*; electric lighting, 1,600*l.*; telephones, 900*l.*; electric fire alarms, 400*l.*—7,040*l.*; furniture for 400 patients, at 25*l.* per patient, 10,000*l.*; contingencies, 3,000*l.*; architects' fees and expenses, 2,900*l.*; quantity surveyor's fees, expenses, lithography, advertising, &c., 600*l.*; clerk of work's salary and expenses, 500*l.*—4,000*l.*; total, 55,040*l.*

VARIETIES.

THE Institution of Gas Engineers open their annual meeting on June 19 in London.

THE contract for the extension of the Parkeston Quay about 1,100 feet in length has been let to Messrs. A. Jackaman & Son, of Slough. Work is to be commenced at once. The price is about 75,000*l.*

THE Stretford District Council have received the sanction of the Local Government Board to their application for 3,412*l.* for the purposes of the extension of the present Council offices. The present building, erected in 1887, cost 4,000*l.*

THE Tysley Bridge, which crosses the Great Western railway between Acock's Green and Small Heath, was blown up on Sunday. The masonry bridge, which was erected about fifty years ago, has been replaced by a larger structure close by on the girder principle.

IN the course of the hearing of a charge at the Dartford police court against three cement-workers of stealing brass valued at 2*l.*, it was stated that the amount of metal broken away from the appliances of the Associated Portland Cement Company represented damage equivalent to 200*l.*

AT the meeting of the Wigton Rural District Council the medical officer of health said that the condition of the houses was a factor in keeping up the rate of mortality from consumption. In many country districts the dwellings were dark, damp and deadly, badly ventilated and without drainage, and with windows that would not open.

THE King of Italy received in private audience on the 25th ult. six members of the deputation from the British fire prevention committee, headed by Mr. Sachs, the chairman. His Majesty evinced special interest in the committee's work, and inquired as to the impression the visitors had received of the Italian fire brigade. The deputation afterwards proceeded to the municipality and witnessed the drill of the Rome fire brigade.

THE Tipton District Council have resolved that Messrs. Dodd & Dodd be engaged to prepare drawings and details for the reconstruction of the present outfall works on lines similar to those they were adopting at Wednesbury; that the surveyor of the Council (Mr. W. Jukes) be appointed the engineer for the construction of the whole of the sewers and house connections as might be required, and that his salary be increased by 100*l.* per annum for five years, he providing any clerical or professional assistance he might require; and that 500*l.* should form part of the cost in respect of which a loan was to be applied for.

AT an inquiry recently held at Dewsbury into an application by the Dewsbury Joint Hospital Board for sanction to borrow an additional 5,000*l.* for the completion of the new fever hospital at Chickenley Heath, the Local Government Inspector made some strong observations about the expense incurred in furnishing the building. The reply of the Board to the application has now been received in Dewsbury, the Board having declined to sanction the whole of the loan. They have reduced the total furnishing allowance per bed from 53*l.* to 35*l.*, which will make a difference of over 800*l.*, which will have to be met out of current expenditure.

THE London and North-Western Railway Company have decided to raise the four lines of metals on their main track to Holyhead by about 3 feet between Rhyl and Prestatyn, Flintshire, in consequence of threatened inundation by the sea. The higher level will be maintained for quite two miles. Materials are being brought to the spot in large quantities and the work is rapidly proceeding. The seaward side of the new embankment will be stone faced. It is also understood that the engineer will leave culverts beneath the railway, so that the sea will then have an uninterrupted flow.

THE Local Government Board inquiry, conducted by Mr. P. M. Crossthwaite, respecting the application of the Bournemouth Town Council for sanction to borrow 18,000*l.* for the purpose of constructing an undercliff drive and works of cliff preservation between the pier and Meyrick Road, was concluded at Bournemouth on Saturday, the 26th ult. There was considerable opposition to the application. The borough surveyor (Mr. F. W. Lacey) expressed the opinion that if something was not done to preserve the cliffs, the overcliff drives and roads, of which the town now had charge, would be lost by being swept into the sea, an event which would be a disastrous one for Bournemouth.

THE St. Pancras committee of the Association which aims at amending the projecting shop clauses of the London Buildings Act of 1905 announce that, having completed their survey of the borough of St. Pancras, they will hold a mass meeting at the St. Pancras town hall. Resolutions are to be submitted protesting against the application of the concrete roof clauses to existing premises, and deputations are to be appointed to wait on the Borough Council for their assistance and the County Council to ask for the repeal of the applicable paragraph or some substantial modification.

A PUBLIC meeting recently held in Sheffield resolved:—"That this Conference heartily approves the proposal to arrange a model cottage exhibition for Yorkshire and the North Midlands, to be held in the neighbourhood of Sheffield in 1907." In a circular calling the meeting it was suggested as a basis for discussion that the exhibition should comprise at least two classes of cottages, and that one of these classes should be of urban cottages (*a*) to cost 200*l.*—not including cost of land; (*b*) built under urban by-laws; (*c*) built at urban rates of wages; (*d*) on municipal land, if possible; (*e*) not more than twelve to the acre.

A DEVELOPMENT of the Forestry Branch of the Armstrong College has been made by an agreement effected between His Majesty's Office of Woods and the college authorities, by which the latter take over the local management of Chopwell Woods, in the county of Durham. These woods are within a few miles of the college, extend over an area of nearly 900 acres, and carry crops of larch, spruce, Scotch pine, oak, ash and other trees, most of which were planted about fifty years ago. The Treasury have consented to a house being provided in the woods as a residence for the college lecturer in forestry, and to continue to pay as heretofore the ordinary expenses of the woods.

HEARTS OF OAK OFFICES.

THE Executive Council of the Hearts of Oak Benefit Society showed their good sense when they resolved to erect offices which would be an example of architecture not only in exterior appearance, but in its planning and arrangements. The Society has been sixty-four years in existence, and it claims to be national in its operations. For some time past the friendly society contrived to do its work in offices which did not differ from other premises in Charlotte Street, Fitzroy Square. But the space available was too limited for operations on the grand scale required in an institution possessing a vast number of members. Having been able to obtain a freehold site in the Euston Road by an outlay of 36,000*l.*, the Council instituted a competition in which Messrs. Essex, Nicol & Goodman were successful. The building is a striking example of the application of modern Renaissance to administrative purposes. The façade is symmetrical, each floor having some feature to impart variety. The windows are large, and as most of them have three bays there is a suggestiveness of large and well-lighted offices, and the repetition imparts unity to the composition. It is rather early to give the exact cost, but it probably amounts for the buildings and appliances to some 60,000*l.* The work has been carried out by the contractor, Mr. C. Gray Hill, of Coventry, under the immediate supervision of Mr. J. Coulson Nicol, the whole of the fittings, furniture and decorations being designed by Mr. G. Salway Nicol.

As the organisation extends throughout the country meetings of representatives had to be provided for. The Delegates' Hall is therefore a remarkable feature of the building, and the gallery, which is usually an excrescence, from the treatment becomes an essential part of the interior. The working drawings and cartoons for every enriched feature and moulding, including the stone sculptured ornaments outside and the modelled Carrara ware inside, the oakwork, the fittings and furniture and the decorative paintings in the Delegates' Hall, were supplied by the contractor. The upper parts of the buildings are no less important than those on the ground floor. By the agency of Messrs. Waygood & Co. height has ceased to be an inconvenience in lofty buildings, for it may be said they have levelled the old distinctions of floors. They have supplied to the new offices of the Hearts of Oak Benefit Society examples of their latest lifts adapted to the peculiar conditions of the building. There are two of their electric passenger lifts, each of which will accommodate five travellers, and which rise at the rate of 175 feet per minute. This type of lift is not only expeditious in travelling, but it is comfortable, and to strangers from the country it is reassuring. Then there are two electric book lifts, which travel at the rate of 120 feet per minute, and are designed to meet the convenience of officials. Another electric service lift travels at a similar rate and is equal to a load of 1½ cwt. The lifts will do much to make the building efficient for the numerous uses for which it was planned. The sanitary arrangements were entrusted to the old-established firm of George Jennings, Ltd.

THE Dundee Harbour engineer has prepared a scheme for the improvement of the Camperdown Dock and the Victoria Dock entrances at a total cost of 33,360*l.* It is desired to enable boats of larger dimensions to obtain admittance.

THE British Chamber of Commerce of Egypt state that the Alexandra Municipality will shortly invite tenders, together with designs, for the construction of three swing-bridges (one carrying a double line of tram rails) over the Mahmoudieh Canal. It is thought that the scheme will cost about 18,000*l*E. to carry out.

THE trustees of the Lough Neagh Drainage District, specially summoned to consider Sir Alexander Binnie's report on the drainage of Lough Neagh and the Lower Bann, agreed to the following resolutions:—That, having carefully considered the suggestions contained in Sir Alex. Binnie's report, we strongly recommend that the scheme propounded by him be adopted and carried out with the least possible delay. That, as the necessity for Sir Alex. Binnie's proposed scheme is due to the faulty navigation and drainage works planned by former Government officials, this Board is strongly of opinion that none of the cost of the works now necessary should fall on the ratepayers.

TESTING VARNISHES.

IN *The Decorator* for May there is a very useful article by Mr. J. Cruickshank Smith, B.Sc., the chemist, upon the testing and valuation of oil varnishes. This is not a subject which has obtained much attention from men of science. It is supposed that analysis is indispensable, and that is not always at the command of those who have to employ varnishes. Manufacturers would, however, often find it advantageous if they expended money on such work. But there are also physical tests which the author describes, and which are more generally applicable. The following extract will suggest some recent attempts :—

"Professor Baily and Dr. Laurie have devised an apparatus which they claim attains this object. The apparatus consists of a blunt steel point ground to a certain radius, upon which varying pressures can be put by means of a spiral spring. The varnish to be tested is painted on glass and is allowed to dry. The steel point is drawn along the glass, and the pressure increased until the surface of the varnish film is scratched. As the pressure is known, a measure of the hardness and toughness of the varnish film is obtained.

"It would appear to be essential, in order to obtain concordant results by the method outlined above, that some standard method of obtaining the dry varnish film should be adopted, as it is well known that samples of the same varnish do not dry uniformly under varying conditions, and unless errors due to variations in time, temperature and humidity are eliminated it is difficult to see how the results obtained by this method can be of real practical utility for the valuation of varnishes.

"The second group of physical tests includes those which are based on the theory that the capacity of varnish films to resist the influences they may be expected to undergo in actual use over a considerable period of time can be estimated with fair accuracy by exposing the films to severe but rigidly controlled conditions for a short period of time and then examining their physical condition."

Some practical drying tests are also described by Mr. Cruickshank Smith which are worth attention by painters. In conclusion he writes :—"The exterior characteristics of varnish, which should be carefully examined in comparing different samples, are brightness and colour. Brightness practically means freedom from suspended matter, and special attention should be directed to this point, as it has been found that the durability of varnish films is greatly interfered with if suspended matter is present even in small traces.

"Colour should be compared against some definite standard. Varnishes may be conveniently divided into four groups as regards colour, viz. extra pale, pale, medium and dark. The palest white copals and French oil varnishes would fall under thefirst heading. 'Pale' varnishes would include the pale copals, pale carriage varnishes, maple and pale oil-paper varnishes. 'Medium' would include most of the standard copal oaks, darker carriage varnishes, &c., while 'dark' would be reserved for a still darker group.

"In comparing the colour of varnishes use may again be made of dried films on glass slips, the actual determination of the colour in comparison with a standard taking place at least forty-eight hours after the varnish ceases to be tacky. It will be found that many varnishes which are pale in themselves and when first spread out in a thin film darken materially in drying.

"There is still a whole series of combined chemical and physical tests which cannot be neglected if a really reliable opinion is to be formed as to the composition of the varnish. Thus the presence of rosin, unsaponifiable matter, metallic compounds and other foreign substances have sometimes to be looked for, particularly if the varnish is bought to specification.

"My aim in the present paper has been to indicate that by means of specially planned practical tests requiring neither expensive apparatus nor elaborate chemical training very fairly reliable judgments may be formed as to the quality and value of competitive samples of varnish. The observer, however, must be careful and accurate both in observing and interpreting results, because the sources of error to which the untrained experimentalist is liable are numerous and the personal equation is prone to predominate."

The paper is a valuable contribution to industrial chemistry.

ST. PAUL'S SCHOOL SOUTH AFRICAN WAR MEMORIAL.

ON Tuesday afternoon last an interesting ceremony took place in the grounds of St. Paul's School, Hammersmith Road, when Field-Marshal Earl Roberts unveiled a handsome memorial to those Paulines who died in the South African war, which was erected through the initiative of Sir C. Clementi Smith, president of the Old Pauline Club. The monument is of stone, and takes the form of a drinking fountain. It is circular in plan, the base consisting of three steps on which stand seven columns of the Tuscan Order supporting an entablature surmounted by a panelled and ribbed copper dome. The stone drinking fountain is placed in the centre, and below it has stone panels with copper tablets on one of which are inscribed the names of the Old Paulines who died in the war, and on the other is the inscription :—

Sodalicium Paulinorum alliique quibus res Paulina curæ hoc posuere monumentum Archididascalo F. W. Walker.— F. S. CHESTERTON, architect.

On the frieze at the top is also the inscription :—

Paulinorum virtutis in Africa spectatæ recordentur posteri.

The monument was erected by Messrs. Adamson, of Putney, at a total cost of about 660*l.*, exclusive of architect's fees.

LONDON COUNTY COUNCIL AND THEIR WORKMEN.

THERE will, no doubt, be disappointment among a certain class of workmen who were convinced that employment under the London County Council was to be on the easiest conditions when they hear of the latest report of the general purposes committee on the subject. In October of last year the Council passed the following resolution :— "That it be referred to the general purposes committee to consider the conditions of employment so that no applicant for employment in the Council's service, otherwise qualified and able to perform the necessary duties, be rejected because of his inability to pass the medical examination; that any workman employed under such circumstances be disentitled to sick benefit, and that an equivalent to the value of sick benefit emolument be added to his ordinary weekly remuneration."

The general purposes committee have now given their opinion as follows :—

We have considered the proposals contained in the resolution and have come to the conclusion that they are impracticable. It has been the practice of the Council, as an employer of labour, to endeavour to secure men thoroughly fitted for their work, and in this respect the Council has acted like other large employers of labour. It is generally believed that in recent years conditions have tended to make it more difficult for men past middle age, or not in sound health, to obtain employment, and we think that if effect were given to the resolution the Council would be pressed to find employment for men whose services were no longer accepted by private employers. The Council will doubtless desire to do all in its power to alleviate any hardship which may have been caused by the Act referred to, but the possible result of giving effect to the resolution, which would appear to contemplate a serious alteration in the practice which has prevailed for many years in the Council's service, is a matter requiring careful consideration.

The resolution can apply only to the staffs of those services in which it is the practice of the Council to appoint men on the permanent staff individually by resolution, *e.g.* main drainage and parks. The tramways general staff are weekly servants only, and sick pay is not allowed unless the illness is due to the nature of the work. The men employed in the works department are engaged by the manager, usually by the hour, at the rates in the Council's list and obtaining in their particular trade, and do not receive sick pay except in the case of injury sustained while at work. Similar conditions obtain with regard to the men temporarily employed on various works, such as the maintenance of asylums, repair of sludge-boats, &c. In all these cases no medical examination is required, and the rates of pay must be taken to cover pay for all ordinary sickness.

With regard to the services to which the resolution

Digitized by Google

would apply, it is the rule to require persons permanently appointed to services such as the main drainage and parks to pass a medical examination. In a few cases men who have failed to pass the examination have nevertheless continued in the regular employment of the Council, subject to the condition that they shall not expect to receive sick pay when absent from illness arising from the infirmity which caused their rejection by the medical examiner, or claim compensation in respect of injuries arising from such infirmity and sustained whilst at work.

Speaking generally, the work of the Council will be more efficiently carried out if only men in sound health are engaged, and in services such as bridges, main drainage and parks, inefficiency in the employés may lead to a considerable increase in the cost of properly conducting the service, while it is extremely difficult to detect such inefficiency.

We are therefore of opinion that it is very desirable to maintain the present practice of requiring persons appointed on the permanent staff to pass a medical examination. The number of applicants for permanent employment, otherwise qualified and able to perform the necessary duties, who are rejected because of inability to pass a medical examination, is very small, and the present system by which special cases receive special treament avoids hardship in any particular case without impairing the efficiency of the Council's service.

In these circumstances we do not think it necessary to discuss in detail the second part of the resolution, but we may perhaps state that we are of opinion that dissatisfaction would be caused among those who did not become entitled by reason of sickness to receive sick pay, if others received a constant addition to their wages in respect of a benefit to which under the same conditions they would not have been entitled.

Sick pay is a benefit to be received only in the event of a certain contingency which may or may not happen in an individual case, and if the proposal indicated in the resolution were adopted, it would follow that when the employé was taken ill his pay would cease, and he would probably be at once reduced to considerable straits, because, even if he had set aside the amount added to his wages in lieu of sick benefit, that amount, having been averaged over those who fell sick and those who did not, would not be equivalent to the pay which the employé would receive under present conditions in times of sickness. We recommend:—

That the reference made by the resolution of October 10, 1905, with regard to the employment by the Council of workmen who fail to pass the medical examination, be discharged.

ECCLESIASTICAL COMMISSIONERS' ESTATE.

WHEN the lease of the estate belonging to the Ecclesiastical Commissioners, which comprises 22 acres in Walworth, expired in 1902, the area was covered by small houses and shops. After a time the Commissioners determined to build upon the greater part of the estate cottages, cottage flats and three-storeyed tenement houses, similar to the buildings already erected by them in Southwark, Lambeth and Westminster. The estimated cost of this housing scheme was 200,000*l*. Of the 96 cottages it was proposed to build 65 have now been erected, 13 with five rooms each and 52 with four rooms each, while of 106 cottage flats of three rooms each, 46 have been completed. With regard to the tenements, of which there are to be 566, there have been completed 22 of four rooms each, 162 of three rooms and 52 of two rooms. The whole estate has been laid out with plenty of space at the back of the buildings as well as at the front, thus securing the light and air which is essential to the tenants. Many of the cottages and cottage flats have their own gardens or yards. The new buildings are constructed of yellow and red brick with roofs of red tiling, there being variations in architectural detail which does away with uniformity in the streets and monotonous environment. Inside the rooms are airy, light and spacious, with necessary accommodation, and every effort has been made to enable a working-class family to live healthily, tidily and in comfort. Ample cupboards are provided in all the rooms, dressers and food cupboards are placed in each kitchen, and each family has a coal-box, while there are ranges for cooking and a fireplace in every bedroom. Both large and small families are provided for, and the rents are such as to be payable by those with fair or small incomes. It is not claimed, however, in regard to rent that the dwellings meet the

CROSLAND HILL STONE, HUDDERSFIELD.

Best Crosland Hill Stone, suitable for all classes of good work, specified by most leading Architects for Church Work and Public Buildings.
Can be supplied in Random Blocks for sawing into Slabs, Panels, Heads, Sills, Mullions, Cornices, or Blocks for Carving, &c.

Digitized by Google

wants of the very poor. The weekly rents, inclusive of rates, range from 14s. for a cottage of five rooms to 5s. 6d. for a tenement of two rooms. A large number of the dwellings are already occupied. The cottages are entirely self-contained, and in addition to the four or five rooms, as the case may be, they have a scullery as well as a separate back-yard or garden. The cottage flats, which are a distinct feature, are to all intents and purposes like a cottage, being self-contained with separate scullery and yard, and each having its own front door. The tenements generally have six families up one stair, two on each floor. The staircases are lighted by electric light. In order to provide against overcrowding subletting is prohibited.

SAFETY OF LODGING-HOUSES.

A REPORT of the joint committee on the Glasgow Buildings Regulation Act and of the Fire Brigade appointed to inquire into the disastrous fire in the Watson Street Home on Sunday, November 19, has been prepared.

While it is not definitely proved, the committee believe that the cause of the disaster was the improper use within their cubicles of lights for reading or smoking by some lodger or lodgers. The committee are of opinion that the cubicles, being made of unprotected wood, materially contributed to the extent of the fire, and that the wooden lining of the ceilings and walls was most undesirable; that the evidence does not show that the means of exit in the premises were insufficient; that each dormitory should have had a suitable door; that it was undesirable that such a lodging-house should have been located above premises containing stock of an inflammable nature; that there were no adequate means of warning the inmates of any outbreak of fire; that the gate on the stair was not capable of being opened on slight pressure, and that there were no fire-extinguishing appliances.

The precautionary measures recommended to be taken to avert any possible recurrence of such a catastrophe are:—That cubicles be made of a non-inflammable material, but, in the event of those being made of wood, that that wood be coated with an approved fire-resisting composition; that no wood lining on the walls and ceilings be permitted; that every lodging-house and hotel containing sleeping accommodation for more than 100 persons shall be provided with at least two adequate means of exit to the street, to the satisfaction of the Master of Works and the chief officer of the fire brigade; that every dormitory be provided with a suitable door to open outwards to the satisfaction of the Master of Works; that no lodging-house be built above premises containing stock of an inflammable nature unless special procautions against fire be taken to the satisfaction of the chief officer of the fire brigade; that every such lodging-house be in direct electric communication with the nearest fire station; that a patrol be in the lodging-house between 11 P.M. and 5 A.M., and that a tell-tale clock be provided for each dormitory at the expense of the licensee, the same to be under the control of the fire department of the city, who shall regularly inspect the recording card; that no door or gate be permitted on the stair unless the same be fitted with a panic bolt to enable it to open outward on slight pressure; that every such lodging-house and hotel be provided with fire-extinguishing appliances, to the satisfaction of the chief officer of the fire brigade; that any new lodging-house with provision for sleeping accommodation for more than 100 persons shall be built with fire-resisting material; that all gas pipes shall be made of iron or other hard metal; that smoking or the use of lighted matches or candles by any lodger after he has retired to the dormitory be punished by immediate expulsion from the house; that no straw or flock mattresses or beds be permitted; and that no license be granted by the local authority, either primarily or by renewal, until the house has been reported on by the Master of Works, the chief officer of the fire brigade and the sanitary inspector.

The town clerk having advised the committee that the local authority had under statute the absolute power to refuse to register any house which they do not consider suitable for the purpose of a common lodging-house, and that, therefore, there was no need to seek any amendment of the law dealing with the regulation and control of such lodging-houses, the committee have no recommendation to make on this aspect of the remit made to them.

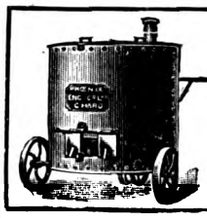
HALL'S Sanitary Washable DISTEMPER

The Real Sanitary Water Paint.

Hall's Distemper is the real Washable Distemper. It was one of the first invented, and is to-day better than ever, because the Manufacturers have, by reason of many years of scientific and practical tests, continually improved its manufacture until perfection has been attained.

Hall's Distemper is made in two qualities—the inside quality is specially for interior wall decoration, the outside quality being most suitable for all other purposes, both inside and out, whether on wood, stone, brickwork, or any kind of building material.



Its utility for Farm and Estate Buildings, such as dairy and tool-sheds, kennels, barns, shooting boxes, and temporary buildings of all sorts, is remarkable.

Full particulars of Hall's Distemper, in the form of a beautiful booklet, entitled "Modern Development in House Decoration," will be sent post free on application to the Sole Proprietors and Manufacturers,
SISSONS BROTHERS & CO., Ltd., HULL.
London Office: 199b Borough High Street, S.E.

A LIST of ART PLATES published in "THE ARCHITECT," will be forwarded on application to GILBERT WOOD & CO., Ltd., Publishers, Imperial Buildings, Ludgate Circus, E.C.

COOLEY'S PATENT
DOUBLE DOWEL-PINS.
By this system each Block is securely fastened to its neighbour, and by means of the double-grip of each Pin it is absolutely impossible for the Blocks to loosen; hence it can be recommended in all places where the traffic is heavy, such as in Factories, Schools, Public Halls and Sheds, &c.
For **Wood-Paving** purposes this system will considerably increase the life of the road by reason of the formation of a solid mass, which counteracts the destroying effects of *vibration*.

SOUTH AFRICA—*Central News Agency, Ltd.*

Telephone No. 4725 Holborn.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.*

WELLINGBOROUGH.—June 14.—For the supply and erection of a steel building with corrugated sheeting 60 feet by 25 feet by 22 feet 6 inches high. The Northamptonshire Direct-Castings Company, Wellingborough.

WELLINGTON.—June 18.—For the completion of All Saints Church, Wellington, Somerset, by the erection of a tower and spire. Mr. J. Houghton Spencer, architect, 5 Hammet Street, Taunton.

WIMBLEDON.—June 18.—For the erection of seven cottages for Corporation's workmen, to be erected in the Durnsford Road, Wimbledon. Deposit 2*l.* 2*s.* The Borough Surveyor's Office, Town Hall, Wimbledon.

THE commodious new premises just completed at Ilkley at the junction of Wells Road and Station Road for the York City and County Banking Company were opened for business on Monday, May 28. The buildings have been erected to designs by Messrs. Clark & Moscrop, architects, Darlington, and the work has been undertaken by the following contractors, under the superintendence of Mr. William Hartley as clerk of works:—Mr. George Smith, masonwork, concreting and ironwork; Messrs. Eagle & Mawson, joinerwork; Mr. W. Lawson, plumbing; Mr. Oswald Lister, plastering; Messrs. R. & T. L. Nelson, slating; Mr. J. G. Boden, painting; and Mr. R. T. Snaith (Darlington), fixtures. With the exception of the bank fittings, the whole of the work has been carried out by local tradesmen, and in such a way that does them great credit. The bank is a very substantial stone structure of pleasing design, and the internal arrangements are as convenient and up-to-date as modern science and skill can make them. The Ilkley branch has been established seven years, Mr. B. T. Akers, the present manager, having had charge throughout.

TRADE NOTES.

MESSRS. E. H. SHORLAND & BROTHER, of Manchester, have just supplied their warm-air ventilating patent Manchester grates for the adult schools, Malton.

MESSRS. W. POTTS & SONS, clock manufacturers, Leeds and Newcastle-upon-Tyne, have received instructions to make and erect a new memorial clock and chimes for the Gray family at Urmston Church, Manchester. The clock will be made generally from the designs and plans of the late Lord Grimthorpe and with all his lordship's latest improvements inserted, and will show the time upon three large external dials and strike the hours and quarters, and be erected at an early date. Messrs. W. Potts & Sons also made the clock and chimes at the adjoining parish church, Flixton, for Miss M. E. Newton, Holly Lodge, as a memorial to her parents, which has given great satisfaction.

ELECTRIC NOTES.

THE Lancashire and Yorkshire Railway Company are extending the electrification of their lines. On June 1 they inaugurated a line from the Dingle to Linacre Road. By July 1 it is expected the electrification of their line to Aintree will be completed.

THE South Shields electric tramways have only recently been in operation, but the tramway committee have decided to ask the Town Council to spend 10,000*l.* in extending the system by carrying the lines to the outlying districts between Boldon Lane and Hudson Street, which is in the extreme west end of the town.

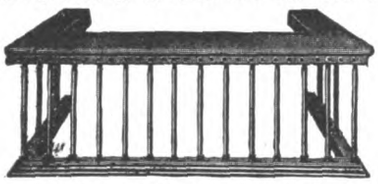
THE tramway committee of Dudley Town Council, having considered the plans of the Birmingham and Midland tramways joint committee for the reconstruction of the Tipton tramway, recommend that the same be approved and accepted subject to the cost of such reconstruction, less an abatement of 10*s.* 1*d.* per lineal yard for old materials, being added to the purchase money and taken into consideration in assessing the rent under a lease, if the company should be entitled to one, and also subject to a formal agreement being entered into by the committee with the Corporation and the owners of the line.

MR. H. R. HOOPER, an inspector from the Local Government Board, held an inquiry at Walsall with respect to an application by the Town Council for sanction to the borrowing of 13,000*l.* for the purpose of the electricity undertaking. There was no opposition to the proposal. The loan was required to carry out extensions necessary to meet the normal growth of the undertaking. Unless the capacity of the works was increased there was a possibility that the committee would not be in a position to meet the demand for current. There is a capital of over 91,000*l.* invested in the undertaking, and in ten years the income increased from 1,500*l.* to 11,806*l.*, of which 7,158*l.* represented lighting, 618*l.* power and 4,030*l.* traction. There has been a reduction in the cost per unit from 4.03*d.* to 1.4*d.*

THE annual visitation to the Royal Observatory, Greenwick, took place on May 30. The Astronomer Royal, in his report, said the continued efficiency of the Observatory was seriously threatened by the schemes for the supply of electric power for the whole of London and surrounding districts from generating stations planted in the immediate vicinity of the Observatory. Tests which had been made showed that even with a small portion of the engineering plant which was now available for work serious tremors were produced. It was hoped that this might be reduced by improved working of the engines. The alternative of providing a remedy for interference in this way with Greenwich meridian work would have to be faced. The report said the question arose why the immediate neighbourhood of the Observatory should be selected for planting a generating station on an unprecedented scale to supply electric power to this district. The very powerful engines required for such a large output would cause vibration to an extent which could hardly be anticipated from previous experience of ordinary engineering plant or railway trains, which had hitherto not affected the work of the Observatory.

BUILDING AND BUILDERS.

THE Bourse at Amsterdam, which was recently built at a cost of 800,000*l.*, is threatened with ruin, and the city architects have decided to close it. The foundations have given way.



THE tender submitted by Messrs. Kerridge & Shaw, of Sturton Street, Cambridge, amounting to 1,651*l.* 5*s.* 8*d.*, has been accepted for Wisbech House. The architects are Messrs. George Baines & Son, 5 Clement's Inn, Strand, London, W.C.

THE London County Council have agreed to expend 62,000*l.* upon the erection of permanent buildings at Colney Hatch in place of the temporary buildings destroyed by fire in 1903, and 22,000*l.* upon additional buildings at the Manor asylum, Epsom.

TOWER BUILDINGS, Water Street, Liverpool, are to be pulled down and extensive new office building erected on the site. All the tenants have to vacate their offices before December 31 and operations will commence on the structure immediately after that date. The buildings were erected fifty years ago according to the designs of the late Sir J. A. Picton.

Digitized by Google

THE Port Commissioners of Calcutta have acquired two and a half square miles of land near their docks at Kiderpur, the southern suburb of Calcutta. They propose to extend the old docks, with a view to meeting the requirements of the next seven years. They will then build large new docks sufficient to meet the expansion of trade for the next fifty years. These works, when completed, will increase the available quayage from 11,000 linear feet to 50,000 linear feet, and the number of berths from twenty-one to eighty. Three new docks will be built piecemeal as required.

THE recently opened lock on the Thames at Molesey replaces the old timber lock which was built in 1853 by the City Corporation, who were at that time the conservators of the river. The new lock has been constructed in seven months, and the work has been carried out entirely by the Thames Conservancy Board. The lock has a superficial area more than two and a half times as large as that of the old one. It is 267 feet long and 30 feet wide, and has a 25-feet entrance and a depth of 9 feet over the sills. The superficial area is 7,950 feet, and the dock is capable of accommodating more than 100 ordinary sized pleasure boats at one time.

VARIETIES.

THE Greenock Corporation have agreed to accept the tender for a destructor from the Horsfall Company, which will cost 14,315*l.*

THE Wallasey Council have been recommended to purchase 13,740 square yards of land at 3*s.* per yard as a site for houses or cottages for the working classes.

THE Local Government Board have refused to interfere with the decision of the Edmonton Council that their unskilled labourers shall be paid a minimum of 30*s.* a week.

THE value of the new linings applied for at Glasgow Dean of Guild Court on the 31st ult. amounted to 106,870*l.* On the same day the valuation of the linings granted at Partick Dean of Guild Court was estimated at 20,000*l.*

THE Accrington Town Council are about to apply to the Local Government Board for powers to borrow 9,000*l.* for the erection of new baths on the site of the Corporation baths in St. James's Street, part of which were some time ago destroyed by fire.

THE Eastbourne borough surveyor reports:—In regard to laying the parades with tar paving, the borough surveyor reports that in his opinion this is the most effective method of minimising the dust nuisance, and it is proposed to extend it to other main thoroughfares.

THE Gorton Council are considering a scheme prepared by their engineer for the extension of the sewage works, and though they have yet come to no decision, they have decided meanwhile to carry out minor alterations which will materially improve the condition of the outfall sewage works.

THE Petworth Parish Council have approved a form of agreement proposed to be entered into between the Petworth Coal, Gas and Coke Company and the Council, for the gas lighting of the town. The proposed agreement will hold for two years, a sliding scale to be instituted after the termination of that period. Petworth was many years equipped with gas lamps, but they were abandoned in favour of oil lamps on account of the high price charged.

THE general report and statistics for 1905 relating to the United Kingdom show that the total output of minerals at the mines under the Coal Mines Act was 249,782,594 tons, of which 236,111,150 tons were coal, 2,847,122 tons fireclay, 7,860,969 tons ironstone, 2,496,567 tons oil shale and 466,786 tons sundry minerals. The total quantity of stone and other minerals obtained from the quarries under the Quarries Act was 46,144,912 tons, of which 3,818,302 tons were iron ore.

THE Lord Provost's committee of Edinburgh Town Council recommend that a series of lectures be given by the following city officials on the work of their departments:—Mr. Pordage, firemaster; Mr. M'Hattie, city gardener; Mr. Newington, electric lighting department; Mr. Herring, chief engineer to the Gas Commissioners; and Mr. M'Kay, inspector of lighting and cleansing. It was agreed to ask that the Council vote 100*l.* to cover the necessary expenses.

works at Kinlochbeg, now looks like early coming to a successful issue. A contract of nearly half a million sterling has been entered into with Messrs. Sir John Jackson & Co., and a considerable number of men are now engaged on the works. An overhead rope railway has been erected for conveying the materials from Loch Leven to the site of the dam some five miles distant.

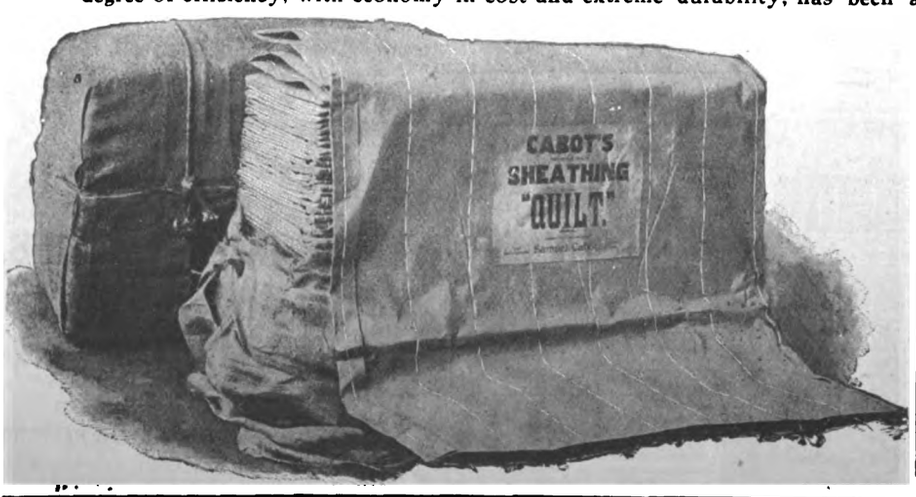
THE town clerk of Liverpool has informed the Wallasey District Council that the total cost incurred by the Corporation in providing and laying the water main from Hatchmere to Wallasey, and incidental works necessary for enabling the supply to be given, amounted to 109,331*l.* 4*s.* 7*d.*, and that that amount was not only very substantially less than the original estimate, 146,000*l.*, but was also less than the amount upon which the payments hitherto made by the Council had been based, namely, 110,000*l.*

THE London, Brighton and South Coast Railway Company opened on the 1st inst. to the public the southern portion of the new station which is gradually replacing the old at Victoria. The new station will have some 2¼ miles of platforms, and there are three lines between each platform, so that when a train has entered and the passengers have alighted it will be shunted on to the middle line of rails until ready for departure. The platforms will be nine in number, and the whole station will be spanned by a glass roof in five bays.

STRIKES increase in number every year in Germany, says a report to the American Department of Commerce. As shown by the published statistics, the average number of strikes for the years 1899 to 1903, inclusive, was 1,242; in 1904 it rose to 1,870, and in 1905 to 2,057. Of much significance is the increasing number of lockouts, which show that combination among employers is also developing. The number of lockouts, which averaged only 42 for the period 1889 to 1903, rose in 1904 to 120, and in 1905 to 200. It is expected that the figures for 1906 will show a further considerable increase.

THE baths and parks committee of the Birmingham Corporation have prepared a scheme for the provision of cottage baths. It is proposed to obtain a lease for a term of 999 years, at a ground rent of 27*l.* 10*s.*, or 6*d.* per yard, of a piece of land 1,100 square yards in area, having a frontage of 17 yards to Bordesley Street. The cost of the buildings, with all necessary fittings adapting them for use as cottage baths, including boundary wall, levelling and asphalting the site, is estimated at 2,000*l.* The proposed buildings will cover about 100 square yards and the remainder of the area will be utilised as a playground for the district.

THE enlargement of the Glasgow Central Railway station, which has been in progress for five years, is now completed. The principal alterations have been the removal of the wall which supported the roof on the west side of the old station and the substitution of steel columns, the reconstruction of Argyle Street bridge, the building of the new bridge over the Clyde, which is one of the broadest and most substantial in the country, the raising of the old bridge by about 2 feet 6 inches, and the dismantling of Bridge Street station. The roof of the new section of the station is nearly 1,000 feet long. It consists of an elliptical-arched girder structure. The station has now thirteen platforms.



A PROVISIONAL committee has been formed for the organisation of the manufacturers of Great Britain into a united body, which would have for its object briefly:—To represent to the Government and the country the principles, aims and needs of manufacturers; to bring about closer relations between employers and employed; to deal with matters of common interest affecting manufacturers, such as legislation, taxation, rates, &c., and to deal with matters of international interest, such as tariffs, trusts, &c. The committee includes Mr. H. H. D. Anderson, of the Associated Portland Cement Manufacturers, Ltd.

THE Aberdeen Conciliation Board have issued their findings in the reference regarding the points in dispute between the masters and operative joiners. The Board's findings, which are entirely in favour of the men, are (1) that there shall be no reduction in the present overtime rate of time and half to time and a quarter; (2) that no alteration be made in the present arrangements as to the engagement of men outside the municipal boundary; and (3) that the time for the giving of notice of alterations in the by-laws shall stand as at present. The joint committee to consider trade matters is to be increased from five to six on each side, but on this point there was an agreement between the parties before the reference.

CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.
KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

A MOVEMENT has been started in Manchester for the acquirement by the citizens of the Platt Hall estate, comprising 77 acres. It is advertised to be put up for auction on June 26. Fears are expressed that it may be purchased with the view to the erection of the greatest possible number of workmen's dwellings. The proposal is to save the plantation parts of the estate for the use of the public, and to lay out other parts as playing-fields, which could be rented by clubs for outdoor games. The remainder, and larger portion, would be laid out on the lines of a garden city, with well-planned dwellings of the smaller kind.

THE Birkenhead Town Council have been furnished with a report of the special sub-committee on the water supply. The gas and water committee resolved that the members of the Council be invited to visit and inspect the sites of the proposed reservoirs and works in North Wales referred to in the report. A communication was also read dealing with the arrangements to be made with Mr. Deacon in reference to any future services to be rendered by him in connection with the proposed gravitation scheme for water supply. This scheme would, it is stated, probably amount to a million pounds.

THE British Steel Smelters, Iron and Tinplate Workers' Association are erecting in various centres workmen's houses, and letting them to their own members at rents which would not be possible under ordinary circumstances. The fifth scheme has been carried out at Stockton-on-Tees, and on Saturday Mr. John Hodge, M.P., general secretary of the Society, unveiled a memorial-stone in connection with thirty-nine houses that have been erected at a cost of between 11,000*l.* and 12,000*l.* Each has six rooms and a bath-room, but the sizes of the rooms vary, and the rents will vary correspondingly from 7*s.* to 8*s.* 9*d.* per week, inclusive of rates.

MR. JUSTICE BRAY recently delivered judgment in an action brought by the Mayor and Borough Council of Westminster against the London County Council. The question for decision was whether the London County Council was under a legal liability to provide means for preventing the sewage of certain houses in Grosvenor Road from passing into the river Thames. Plaintiffs alleged that this liability was created by Section 135 of the Metropolis Management Act 1855, or by Section 1 of the Amending Act of 1858. His Lordship held that the Metropolitan Board of Works, the predecessors of the London County Council, were not bound to lay a main sewer so as to intercept the drains of every house that drained into the Thames. He therefore entered judgment for the defendants, with costs.

MR. J. W. BRADLEY, M.Inst.C.E., chief engineer of Westminster, announces that it is the intention of the City Council to repave certain streets in the city. The contracts provide for the work to be completed with all despatch and with as little inconvenience as possible to those occupying premises along the street. The gas, water, electricity, telephone, telegraph, lighting, hydraulic power and other trenching companies have been notified in order that they may carry out any alterations and repairs to their mains and services immediately before or during the execution of the proposed works, with the view of obviating interference with the paving by them in the near future. The police authorities have also been informed of the intended works, so that they may make such arrangements as are necessary for the direction and control of the street traffic during the time the street works are in the hands of the contractor.

THE Thames Conservancy state in their annual report that during 1905 sewage from twelve places, representing a population of over 27,000 persons, was diverted from tributaries of the Thames. At nearly all the towns and centres of population in the Thames watershed works for the purification of the drainage are now in operation. Special attention is given to these works, with the object of seeing that their efficiency is maintained, and in all cases where the systems adopted provide for the passage of an effluent into a stream, the effluent is watched and frequently analysed. Generally speaking, it may be said that at the few remaining places where pollution still reaches the streams, sewage disposal systems have been carried out, and all that remains to be done is the connection of premises with the new systems.

THE permanent buildings erected at Bagnall by the North Staffordshire joint small-pox hospital board have been opened. The site is near the village of Bagnall and contains about 7½ acres. The accommodation of the hospital at the rate of 2,000 cubic feet per bed is thirty-nine beds, and there are two concrete sites for a sixteen-bed pavilion on each, prepared to meet any emergency that may arise. The cost of the permanent works and buildings has been approximately 8,000*l.* The hospital comprises a commodious administrative block, isolation pavilion, laundry, ambulance sheds, disinfecting rooms, destructor, boiler-house, stables, &c. The whole of the work has been carried out from the designs and under the supervision of Mr. E. Jones, architect to the joint hospital board, and the buildings have been erected and the concrete sites prepared by Mr. James Moss, of Milton.

MR. W. J. TAYLOR, the Hampshire county surveyor, in his annual report states that the wearing and loosening effect of the indiarubber tired wheels of light motor-cars calls for special attention. It is found that this class of traffic, owing to its travelling at higher speed and by its adherence to the centre portion of the roads, has so concentrated the wear as to rapidly form tracks or depressions in the surfaces of many miles of main roads which will entail considerable expense to repair. This "tracking" of the roads by light motor-cars—which follow the general tendency of all vehicles, especially on lightly trafficked roads, to use the centre portion only—was very conspicuous on nearly all main roads throughout the county; possibly on some portions of the road it will in the end be found necessary and more economical to repair these tracks, and coat at least the centre with hard material, even if, owing to expense, the rest of the surface must be still repaired with local materials, as basalt or granite tracks will not only carry the loads passing over them with much less wear from attrition than flint or gravel, but will better resist the disintegration or loosening of the surfaces which the india-rubber tyred wheels of motor-cars cause in so marked a manner.

THE Iveagh Trust Public Baths in Bride Road, Dublin, were opened on the 6th inst. The main building is of red brick and sandstone, with stone dressings, except the first storey, which is of cut granite. Its length is 176 feet, its width 53 feet, and height from the basement about 60 feet. It has a pitch-pine roof supported by steel principals, and its walls are of white enamelled tiles. The swimming-bath measures 82½ by 48½ feet, while the pond, which is covered on the bottom and sides with white enamelled bricks, measures 65 feet by 30, and affords a depth of water from 3 feet 6 inches to 6 feet. Overhead is a glass roof and a range of side windows for ventilating the building and for lighting the swimming pond, whilst by night the entire

Digitized by Google

premises are lighted by electric lamps. On the two sides of the pond are forty-seven dressing-boxes for the use of bathers, and at the extreme northern end is the instructor's box. In addition to the swimming pond there are sixteen hot and cold reclining baths for men and nine for women, arranged on opposite sides of the building, running around which there is a gallery immediately over the pond, at the south end of which there is an ample supply of shower-baths, foot-baths, lavatories, &c. There is a washhouse at the south end lined with white enamelled tiles and equipped with washing, wringing and mangling machines, together with a drying closet of a new design for the sole use of the baths. In addition to the foregoing there is a towel store, a workshop, and a number of lavatories for the use of the workmen who are engaged on the premises. The contractor was Mr. W. Beckett, of Dublin, who carried out the designs of Messrs. Kaye-Parry & Ross.

A SPECIAL sub-committee of the cleaning and lighting committee of Edinburgh Town Council urge the advisability of extinguishing each alternate gas-lamp in the streets where more than 2 feet per lamp is burned, as is done in the case of the electric light. Also that the number of lamps fitted for the 2-feet consumption should be considerably increased beyond the number hitherto proposed in the Council, the question of providing incandescent gas-lamps in certain proportions with 2 or 2½-feet consumption having been recently under consideration. The suggestion was also made that a room should be set apart in the Corporation buildings for testing the illuminating power of the gas-supply from the mains and the voltage of the electric lighting.

MR HENRY B. MILLER, United States Consul-General, writing from Yokohama, states:—"Various new companies and extensions, involving a large outlay of capital, are about to be launched, and the following figures are of interest. Capital required for companies being promoted to supply water-power for electric motor-power, estimated at 7,000,000*l.*; for new electric light and railway companies and for extension purposes, 1,935,000*l.*, of which 770,000*l.* will be supplied from abroad; for extension of spinning mills, 3,255,000*l.* Municipal enterprises in many cities involve an outlay of 2,600,000*l.* New mining companies are also being floated. Their aggregate capital amounts to 3,500,000*l.*, of which 1,770,000*l.* is to be raised by foreign loans. New railway and shipbuilding enterprises represent the sum of 5,000,000*l.* Almost every steamer arriving in Kobe from Europe has had consignments of machinery on board."

THE Glasgow sanitary inspector in his annual report states:—Steady progress continues to be made in the work of reducing the daily issue of smoke from factory chimneys. 14,406 observations of such chimneys were made during the year by the four smoke inspectors, who also made 1,395 careful inspections of boiler and other furnaces which were recognised as regular smoke producers. 127 prosecutions were taken against offenders, resulting in 124 convictions, and fines were imposed amounting to 111*l.* 11*s.* 6*d.* In ninety-eight of these cases the excessive smoke production was due to carelessness or want of skill on the part of firemen, while in the remaining twenty-six cases, although the element of careless firing played a certain part, want of chimney draught, insufficient boiler power, defective flues or other structural causes were mainly responsible for the nuisance produced. Improvements on furnaces continue to be made at the instance of the department.

HOUSING IN BIRMINGHAM.

THE housing committee of the Birmingham Corporation, who last year visited some German towns, have prepared a report. After suggesting improvement of existing conditions on the system adopted by Miss Octavia Hill, they recommend the erection of homes in outlying districts. They say that the most enlightened opinion to-day is that streets in purely artisan residential quarters, instead of being made narrow and having the houses set back from the road, are often made wider and more expensively than is necessary, thereby forcing up house rent beyond the means of those who would be greatly benefited by changing their abode from the centre of the city to districts nearer to the open country, whereas they fail to prevent the erection of jerry-built houses, which are harmful to the people who live in them and a continual source of expense and annoyance to the people who own them.

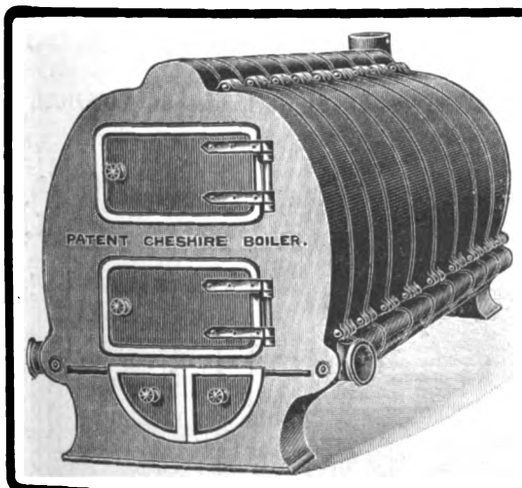
The creation of new congested districts, without the necessaries of healthy life now going on in large cities can only be prevented, so far as our own city is concerned, by obtaining power to forbid the erection of any new buildings except in accordance with a general plan for developing all uncovered land within the city boundaries. For the preparation of this plan a special committee should be appointed, consisting of representatives from the public works, health, baths and parks, tramways and housing committees, together with an architect, builder, medical man, lawyer, surveyor and estate agent to be co-opted by the Council for their special knowledge of housing requirements and land development. This committee would, in preparing such a plan, allow for the proper laying out of the undeveloped areas, and report their recommendations to the Council with regard thereto. The healthy development of the city would undoubtedly be much assisted if the Council could obtain power to purchase land without, as at present, being obliged to specify the exact purpose for which the land is to be used.

The committee are of opinion that a Corporation cannot own too much land, provided that it is judiciously purchased. Municipal land could be laid out with open spaces, and all other essentials to a healthy, happy community, with the additional advantage that any future rise in the value of the land would directly or indirectly go to the ratepayers. The Corporation could then assist private individuals and public utility building societies, with whose *bona-fides* they were satisfied, to erect at the lowest possible rate healthy, cheerful houses for people with small incomes. The policy of buying land and encouraging other people to build the houses would enable the Corporation to give a great stimulus to the supply of good, cheap houses on the outskirts of the city, and would thereby benefit a very large number of people. To obtain the necessary power to enforce town extension plans and carry out a vigorous policy of land purchase, fresh legislation is essential. The committee are of opinion that this legislation should be of a general and not a local character, and therefore they do not suggest that the Corporation should be put to the expense of promoting a Bill to effect this object. In their opinion it would be equally effective and avoid all expense if a private Bill were introduced. An expression of opinion in favour of such legislation by the City Council of Birmingham would greatly assist the passage through Parliament of such a Bill, and this the committee recommend should be given.



Another important point in connection with this part of the housing problem is the desirability of enabling the occupiers of small houses to gradually acquire the houses they live in. It was with this object in view Mr. Joseph Chamberiain introduced the Bill which resulted in the Small Dwellings Acquisition Act. Efforts should be made to get this Act to achieve its object.

With regard to the general work of the committee since its inception in April 1901 to May 1906, the following particulars are submitted:—Number of houses rendered habitable, with or without notice, 1,132; number of houses demolished as unfit for human habitation, 445; average cost to the Corporation of each house dealt with (including legal, administrative and general expenses), 2*l.* 2*s.*; number of obstructive buildings removed, 77; average cost to the Corporation of each building removed, 29*l.*; number of courts opened to the street, 41; spaces in congested districts now thrown open by the operations of the committee, about 12 acres.

STANDARD TEMPLATES FOR PIPE FLANGES.

THE Engineering Standards Committee, having felt that templates for pipe flanges could be manufactured more cheaply and accurately in quantities by proper machinery than by the old-fashioned way of making a single template at a time, entered into an arrangement with Messrs. Joseph Sankey & Sons, Ltd., of Bilston, who have long been known in the electrical world for their accurate stamping of core discs for dynamo and motor construction, to manufacture commercial sets of standard pipe-flange templates in large quantities.

In order to insure a high degree of accuracy in the commercial sets of templates, the committee in the first instance arranged for the manufacture of a set of male templates for all the sizes and drillings recommended by them in their standard tables for pipe flanges (report No. 10). These male templates, which were made with extreme care, were

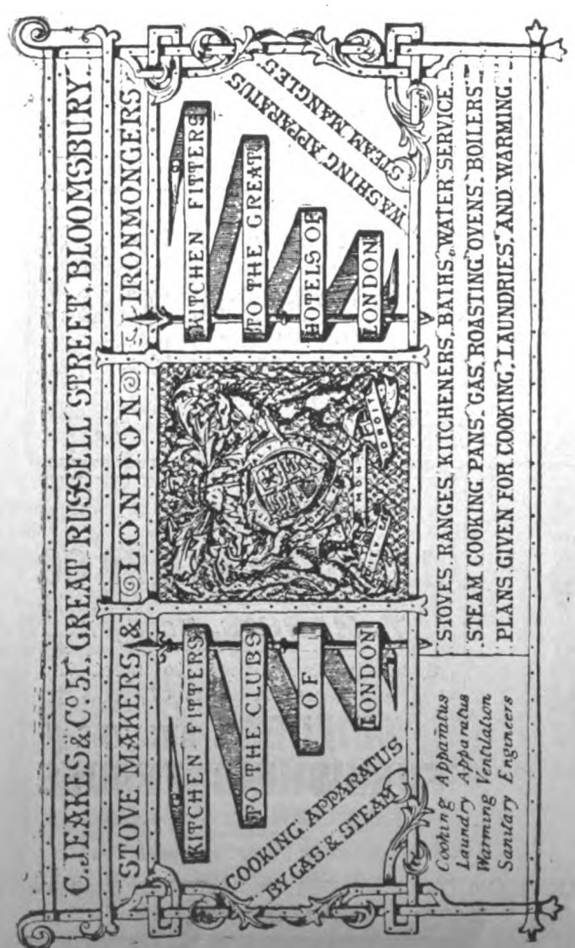
forwarded to the National Physical Laboratory, where they were carefully measured up and a certificate of their accuracy obtained. All the commercial sets are carefully checked against the verified standard set before being issued. Accuracy of drilling is thus insured, and it is hoped that the difficulty of flanges made by one maker refusing to fit the flanges of another, though they both may purport to be drilled in accordance with the committee's recommendations, will be overcome. All engineers at one time or another have experienced the difficulty and annoyance of finding that flanges which have been nominally drilled to the same dimension, refuse to go together because either the bolt circles are slightly different or the spacing of the holes is not quite uniform. The fact that all commercial templates will fit in any position the corresponding certified male templates effectually does away with these difficulties, and the templates being made in large numbers, Messrs. Sankey are enabled to offer them at a price below that at which an engineer could make them for himself.

The templates are made of thin steel plate painted over with aluminium paint, a small piece being cut out at the extremity of each centre line so as to enable the fitter to see that the centre line of the template coincides with the centre line of his flange.

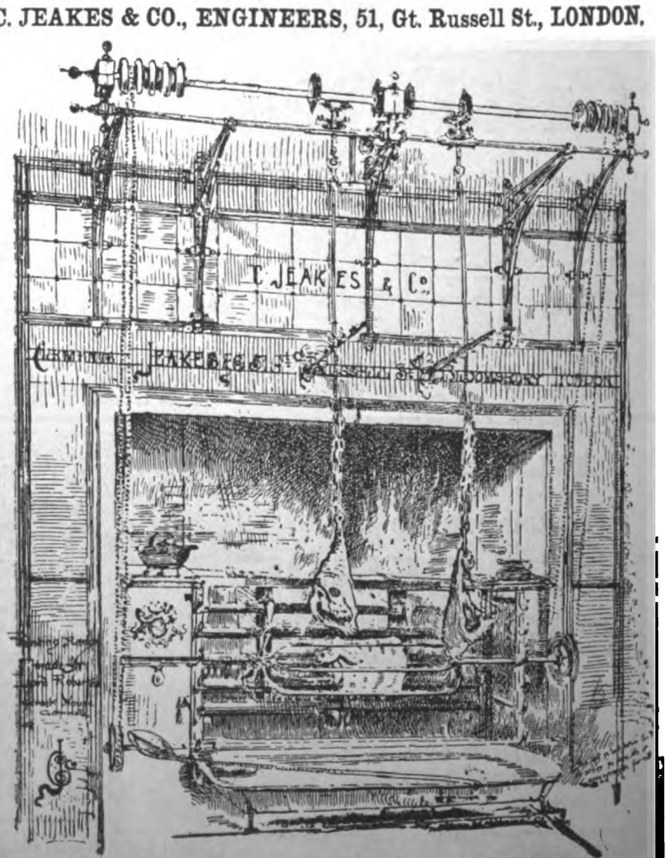
In the interests of the engineering industry it is desirable that the existence of these templates should be as widely known as possible in order that full advantage might be taken of the standardisation the committee has sought to effect.

TESTS OF OPEN DOMESTIC GRATES.



IT will be remembered that at the suggestion of Sir Henry Tanner several tests were made of open grates in order to discover their power for the prevention of smoke, heating, as well as economy of fuel and suitability for office and household purposes. The sub-committee consisted of Dr. H. A. des Vœux and Mr. W. H. Atkin Berry, architect, acting in conjunction with Sir Henry Tanner. The report has been published by the Coal Smoke Abatement Society.

As a final result of the whole of the tests the examiners found "that of the grates submitted those of Messrs. J. & R. Corker, Messrs. Candy & Co. and Messrs. Hendry & Pattisson (Boyd's) are the best, showing practically equal results, and that the 'Florence' (the London Warming and Ventilating Company) very nearly approximates to them."



The method of conducting the tests was as follows:—The grates were indicated only by distinctive numbers and the chimneys by distinctive letters of the alphabet painted on each flue pot. The names of the grates were unknown to the testers. The allotment of chimneys for observation by each of the smoke recorders was changed on each of the four days, the observers thus having a different set of chimneys every day. The fires were prepared first with a layer of chips, then of wood and then of coal. The coal was weighed out and brought in carefully constructed trays, with two divisions, each division holding 5 lbs. of coal. The fires were prepared each morning before eight o'clock, at which hour they were lighted, and were regulated throughout the day with the object of attaining and maintaining a temperature of 60 deg. Fahr. in the room, or as near that as possible. The temperatures were recorded every half hour, one thermometer being placed in the corridor outside the rooms and two in each of the rooms. Of the latter one was fixed at a distance of 5 feet in front of the fire and 3 feet above the floor and the other on the wall approximately 15 feet from the fire. The smoke emitted was registered according to the scale devised by the late Bryan Donkin, and was carefully recorded on charts at regular intervals of five minutes throughout the hours of testing, a separate chart being used for each flue. At 4 P.M.—*i.e.* after eight hours—the fires were drawn, and when cold the cinders were separated from the ashes and weighed, and the weight of cinders of each grate was recorded and was subtracted from the weight of coal placed on the fire. The wood supplied to each fire was also weighed, and half its weight was added to the amount of coal, making a grand total of the fuel actually burned.

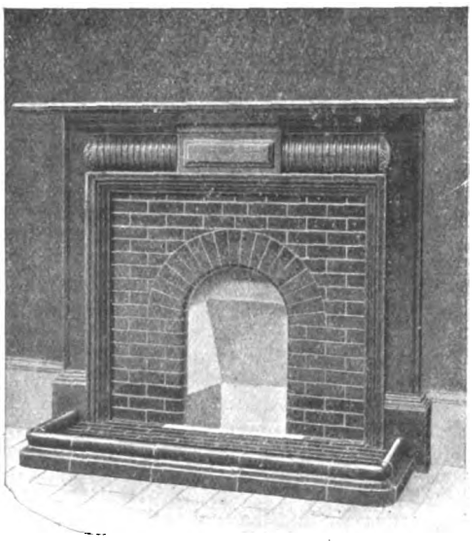
The foregoing description shows the care with which the tests were carried out. As one of the regulations was that no owners of grates nor any representatives were allowed to be present the impartiality of the investigation cannot be doubted.

After the first test on twenty-four open grates burning bituminous coal, the following grates were selected for

C. JEAKES & CO., ENGINEERS, 51, Gt. Russell St., LONDON.

COOKING, LAUNDRY, HEATING, VENTILATION, Etc.

Digitized by Google



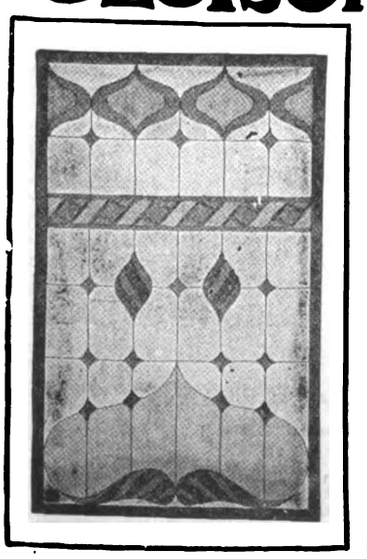
further test, viz. those of Messrs. Candy, Messrs. J. & R. Corker, and the London Warming and Ventilating Company.

The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained. It is not necessary to describe all the tests. The final results obtained on retesting the five selected grates are shown in the following table :—

Names of Firms (given in Alphabetical Order).	Amount of Coal, less Cinders, plus half Wood, in Pounds.	Ashes in Pounds.	Stoking.	Temperatures (degrees Fahrenheit). I. Thermometer in Passage.	II. Thermometer in Room.	Difference between I. and II.	Radiation.	Smoke.
Candy & Co. .	25.25	2.6	4.0	43.9	51.7	7.8	84.3	0.85
Corker, J. & R. .	26.0	1.3	4.0	..	52.75	8.8	70.3	0.70
Hendry & Pattisson (Boyd) .	35.9	2.25	5.75	..	55.4	11.5	98.1	0.88
London Warming and Ventilating Company . .	25.75	1.9	4.2	.	53.6	6.7	82.2	0.79
Teale Fireplace Company . .	26.25	1.3	4.0	..	52.6	8.7	83.9	0.84

The following are the grates which were included in the final retesting, and which were considered as the best, showing practically equal results :—

Messrs. Candy & Co., Ltd.—The "Devon" Fire.—The Devon fire is constructed entirely of fireclay ware, and is made for convenience in two pieces specially designed to radiate the heat most effectually towards the centre of the room. For this purpose the hearth is raised to the level of the fire. The lower portion of the fireplace has a solid bottom directly upon which the fire burns, there being no metal grid or air-chamber beneath. It is claimed that the most perfect combustion is obtained by so placing the fire immediately on a solid block of fireclay, and that with such an arrangement the question of ashes presents no difficulty whatever. The bottom may be made flat with detachable bars, as used in the present test, or may be hollow, in which case no bars are required. The illustration herewith shows a fire with flat bottom and detachable bars faced



with a metal surround and movable canopy, but these may be dispensed with and a simple brick arch substituted.

Messrs. Hendry & Pattisson's two grates :—

A.—D. O. Boyd's Improved Hygiastic Warm-Air Grate.—These grates are supplied with fresh air from the outside with the object of circulating round the back of the grate and entering the room through a grating over the fire in a continuous stream, thus keeping the temperature even and ventilating the room by expelling the foul air. The cast-iron fronts are fitted with canopy or without, as preferred. The lumps are of fireclay and are sloped to assist radiation, and being built up of specially unbreakable joints it is claimed that they will not crack through unequal expansion or intense heat. They are encased in a rivetted steel back which is carried up and finished round the flue so as to simplify and lessen the cost of fixing. There are regulating

valves for the smoke and air and a box ashpan under the fire for the purpose of keeping the hearth clean and economising fuel. The bars slope inwards with the inten-

tion of deflecting air into the fuel and preventing cinders or coal from dropping out.

B.—No. 2, D. O. Boya's Improved Non-warm Air Grate.—The cast-iron fronts of this grate are fitted with canopy or without, as preferred. The lumps are of the best Stourbridge fireclay, and are built up with extra unbreakable joints and secured to the front with wrought-iron straps. They are sloped with the object of assisting radiation, and it is claimed that they will not crack through unequal expansion or intense heat. There is a regulating valve for the smoke and a box ashpan under the fire for the purpose of keeping the hearth clean and economising fuel when slow combustion is required. The bars slope inwards with the intention of deflecting air into the fuel and preventing cinders or coal from dropping out.

Messrs. J. & R. Corker, Ltd.—The "Draw-well" Grate.—This grate is fitted with an adjustable canopy, semi-circular and solid-brick back, with solid-brick back in front sloping inwards, the bottom forming a dish or basin with loose grate to lift out. There is a ventilating fret with pan attached. When the fire is out the bottom grate can be

removed, and the dust and ashes can then be carried away in the pan without causing them to fly about the room.

All the grates tested were worked with the object of obtaining their utmost capacity, and not under the conditions obtaining in an ordinary room, which would generally be more variable. The fires were not allowed to burn low, therefore the amount of smoke emitted in these tests was the minimum that can be expected.

STEAM HEATING SYSTEMS

NOTICE.

The attention of all Heating Engineers, Contractors, and Users of Steam for Heating Purposes is particularly drawn to the fact that Low-pressure Steam or Steam at Atmospheric Pressure can only be Economically and Successfully installed under License for the use of the Patented Systems owned by the ATMOSPHERIC STEAM HEATING CO. LIMITED, of 52 Gray's Inn Road, London.

CAUTION.

IT having come to the knowledge of the Atmospheric Steam Heating Co. Limited that certain persons installed a Steam Heating System in which the Return Mains were in a state of Vacuum or Partial Vacuum, and in which mains Automatic Valves were employed for Regulating the Flow of Steam therethrough, and that such system and installation were not carried out under the license or by the authority of the Atmospheric Steam Heating Co. Limited:

Notice is therefore hereby given, *that upon an application to the Chancery Division of the High Court of Justice, the Honourable Mr. Justice Swinfen Eady has GRANTED AN INJUNCTION, with costs, perpetually restraining certain persons from Infringing the Letters Patent of the said Company in connection with the installation of the Steam Heating System, as aforesaid, that was installed without the leave or authority of the Atmospheric Steam Heating Co. Limited.*

These systems are in successful operation in Government Buildings, Hotels, Hospitals, Workhouses, Schools, Banks, Office Buildings, Warehouses, Manufactories, and Private Houses, installed by various contractors under the Company's License.

The Atmospheric Steam Heating Co. Limited do not undertake any contracting work, but supply all the Fittings and Particulars for enabling their Patented Systems to be installed by heating engineers, either for new equipments or for conversions from the old direct steam heating to the Atmospheric Steam Heating Company's Patented Systems, by means of which exhaust steam can be made to be equally effective over an extensive range of mains or pipes.

Dated this 30th day of May, 1906.

ARTHUR T. ASHWELL,

26 VICTORIA STREET, WESTMINSTER;
AND NOTTINGHAM,

Solicitor for the Atmospheric Steam Heating Co. Limited.

IMPORTANT TESTS OF OPEN DOMESTIC GRATES,

Carried out Officially by the Coal Smoke Abatement Society In Conjunction with H.M. OFFICE OF WORKS, At the New Government Buildings in Parliament St., London.

REPORT—See page 25 of Supplement.

As a final result of the whole of the tests the Examiners find that of the grates submitted those of

Messrs. CANDY & CO.

and of two other makers are the best, showing practically equal results. The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained; the fires were bright and clear.

VELURE

VELURE

WHAT WE SAY

VELURE is a perfected JAPAN PAINT, superseding varnish, with remarkable spreading, elastic, and weather-resisting properties. One coat equals two of paint and one of varnish, and wears twice as long. 120 colours. Any shade matched. Sanitary, washable.

Will not crack, chip, peel, blister, or fade. SAVES TIME, LABOUR, VARNISH, AND MONEY.

WORTH | ONE GALLON WILL COVER ABOUT 90 SQUARE YARDS | TRYING

WHAT CUSTOMERS SAY

ONE OR MORE FRESH LETTERS WILL APPEAR EACH TIME.

Shall certainly Insist on Velure.

We had the whole of the iron and woodwork of our building painted with your Velure last summer, and were very pleased with the result. Should we require any further painting during the present summer, we shall certainly insist on Velure being used.

KETTERING CO-OP. SOC., LTD.,

ARCHITECTURE, FURNISHING, DECORATION, FINE ARTS.

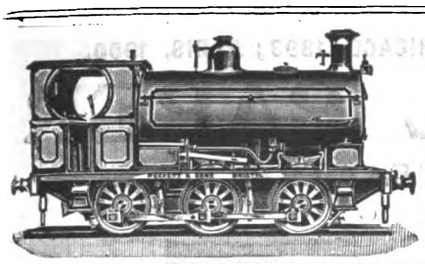
E. LYON-CLAESEN, Publisher, 8 Rue Berckmans, Brussels.

The house makes a specialty of publishing artistic editions of all kinds—*éditions de luxe*—and can supply all the works treating the subjects of Architecture, the Industrial and Decorative Arts, Furniture, Painting, Sculpture, the Fine Arts, &c.

TOURS ET TOURELLES HISTORIQUES DE LA BELGIQUE, or THE HISTORIC TOWERS AND TURRETS OF BELGIUM. From the water-colours of JEAN BAES. Among the architectural publications on the ancient edifices of Belgium, scarcely any can be found which give a reproduction of the admirable towers and charming turrets, so justly considered of the greatest interest. This work consists of 50 coloured folio plates, difficult to distinguish from the originals, mounted on handsome cardboard and contained in a rich portfolio. Price £4.

TRAVAUX D'ARCHITECTURE EXECUTÉS EN BELGIQUE, or ARCHITECTURAL WORKS EXECUTED IN BELGIUM. By HENRY BEYEART, Architect. This work contains the most interesting productions of Henry Beyeart, and presents, with fullest details, his principal edifices. It is the reproduction of his own designs arranged by himself. Each construction is explained by plans, details, elevations, sections, &c., drawn to scale. The work consists of 240 folio plates, in two portfolios. Price complete, £14 8s.

L'EMULATION.



A MONTHLY JOURNAL. ORGAN OF THE "SOCIÉTÉ CENTRALE D'ARCHITECTURE" OF BELGIUM.

The latest volume of the New Series is in preparation, and will form a valuable addition to the Collection. Each number consists of four or five folio plates, eight pages of text, and a supplement of twelve pages. It produces in chromolithography, heliogravure, phototype, etching, &c., prominent examples of ancient and current architecture, and the text is devoted to this profession. The Supplement contains articles pertinent to architecture, and advertisements. Subscriptions date from January 1. Price per year, £1 8s. The whole year, when complete, in portfolio, £1 12s.

GOOD ADVICE.

Architects, Contractors, and others are recommended to journey by the

GREAT CENTRAL RAILWAY.

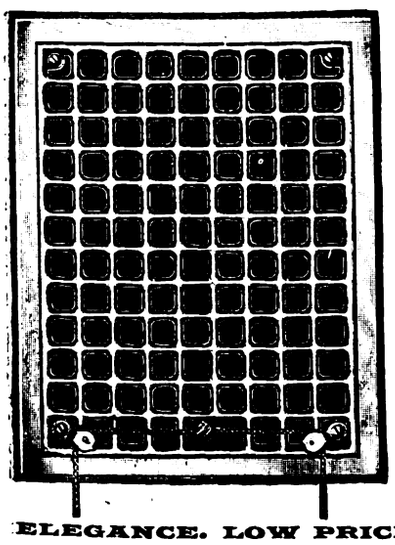
They will find it

RAPID TRAVEL IN LUXURY.

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system.

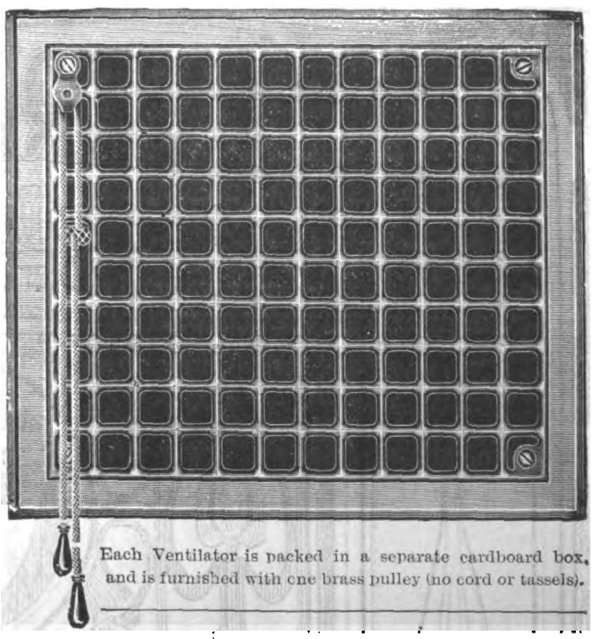


Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains *via* Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 30 per cent. off ordinary fares.

The . . .



H. & C. Wrought Steel "LOUVRE" VENTILATORS.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 P.M. *on Thursdays.*

COMPETITIONS OPEN.

GLOSSOP.—June 26.—For the erection of a nursing and convalescent home at Glossop, at a cost not exceeding 6,000*l.*, to include building, decorations and furniture. A premium of 20*l.* will be awarded for the design placed first, and 10*l.* for that placed second. Town Clerk, Glossop.

LIVERPOOL.—July 2.—For a secondary school for giris in Aigburth Lane. Architects must be practising as principals in Lancashire or Cheshire. Conditions, &c., sent on the remittance of one guinea to Mr. E. R. Pickmere, town clerk, Municipal Offices, Liverpool.

LUXFER SASH CANOPY SKYLIGHT PAVEMENT PRISMS

AN EXPLANATION.—The Luxfer Prism is a flat-backed prism, and is the best for Daylighting dark interiors. The absurdity of any claim to the contrary can easily be demonstrated. Prisms with corrugated backs were patented by the Luxfer Company in 1897, and discarded in favour of a more perfect invention, viz. The Luxfer Prisms, that have been sold in this country during the past six years.

The British Luxfer Prism Synd., Ltd., 16 Hill St., Finsbury, E.C.

Digitized by Google

stream), retaining walls and the kerbing, channelling, metalling, &c., of the roadway between the two bridges. Deposit 3*l.* 3*s.* Mr. W. H. Taylor, Engineer and Surveyor to the Council, Town Hall, Aylesbury.

THE chief engineer of the Manchester Ship Canal expresses the opinion that a lock type of canal at Panama will bring about disaster. He bases his principal objection to the lock system on the liability to damage through unavoidable accidents, and points to the record on the Manchester Canal, where, since its establishment twelve years ago, lock gates have been five times wrecked by vessels.

TRADE NOTES.

WE have been requested to announce that Messrs. Samuel Elliott & Sons, Ltd., of the Joinery Works, Caversham, Reading, have appointed Mr. T. E. Quan as their representative.

BOROUGH engineers, road surveyors and local authorities as well as owners of landed estates, should give attention to the stall (No. 39) of the Phœnix Engineering Company, Limited, at the Royal Agricultural Society's Show, Derby. Among the pumping machinery will be "Floodgate" high-capacity hand pumps for dealing with large quantities of dirty water, liquid manure, sewage, &c.; the "Highland" hand lift and force pump, suitable for water supply, irrigation, fire purposes, &c., also a specially constructed double-barrel estate fire pump. The boiling pans, both vertical and horizontal pattern, are also constructed for heating tar, pitch and bitumen for road-making, pavement repairs, and for sprinkling roads and paths to overcome the dust nuisance. Water and liquid manure carts of a cheap and strong type will also be shown. The company manufacture, besides the above, all kinds of estate appliances, a catalogue of which will be posted free on application.

THE King's Norton Council have accepted an offer of the Ecclesiastical Commissioners to lend the Council the sum of 66,000*l.* (being 26,000*l.* for the purchase and 40,000*l.* for the reconstruction and electrification of the Moseley and King's Heath tramway, and the extension to Alcester Lanes End) at the rate of 3¼ per cent. per annum for a period of twenty-one years. The committee recommended that Mr. C. H. Gadsby be engaged to act as engineer in respect to the reconstruction of the lines.

THE LEEDS FIRECLAY COMPANY, LTD.
Head Office: WORTLEY, LEEDS.

OATES & GREEN'S PATENT HEXAGONAL FIRECLAY URINALS.

VARIETIES.

THE St. Helens Town Council have adopted a sewerage scheme for the Parr and Sutton districts at an estimated cost of 48,000*l.*

THE recent heavy seas having proved the destructibility of the asphalte laid down on the new Marine Drive at Scarborough, the Town Council have determined to substitute small concrete blocks at a cost of 8,000*l.*

THE general post-office, Edinburgh, is to be enlarged at a probable cost of 50,000*l.* Mr. Oldrieve, of the Board of Works, is preparing the working drawings. The present building will be increased in height by an additional storey, and extended eastward.

A FARMER informed the Lancaster Rural Council that during the past winter he had spent more than 20*l.* extra in veterinary fees owing to the illness of cattle caused by eating hay impregnated with dust raised by motor-cars. In addition he had to make up for the consequent decrease of milk supply.

THE Worcester City Council have been informed that the sewage-disposal works had now so far progressed that the water and sewerage committee, who are carrying out the scheme, are of opinion that the work would be completed within the estimated sum of 93,000*l.* The amount at present expended is 64,000*l.*

THE Urban District Council of Risca having applied to the Local Government Board for sanction to borrow 9,000*l.* for the purposes of a scheme under the housing of the Working Classes Act, an inquiry was held by Major J. Stewart, R.E. It was stated that at present the Colliery Company were paying 43 per cent. of the rates and employing nearly 1,800 men, several of whom were obliged to live miles from their work.

AT a Local Government Board Inquiry held at Wigton by Mr. H. Percy Boulnois into the Urban District Council's application to borrow 2,000*l.* for water supply works, it was stated that 60,000 gallons of water were consumed weekly at the public baths. The inspector asked why they did not filter the water and use it again as was done at Manchester and other places. He was told that in one of the baths in Manchester the same water, so treated, had been in use for a year without being changed. It struck him as an excellent thing.

THE Bournville Trust have offered to a local Co-operative Tenants' Society the lease of twenty acres at a ground rent of 11*l.* 10*s.* per acre, with a view to the erection of artisans' dwellings on model village lines. The Society, if formed, will have the option of taking up five acres only at a time, which will relieve them of a large amount of expenditure. The number of houses must not exceed eleven per acre. The land will be let on a lease for ninety-nine years, at the end of which time the Society would have the option of a further lease or leases at revised terms. For every ten acres taken by the Society the Bournville Village Trust will grant one acre of the ten free of cost, so that for twenty acres leased, ground rent will have to be paid on only eighteen acres, the remaining two acres to be used as permanent open spaces.

THE report of the Central London Unemployed Fund, just issued, suggests that probably the most successful colony being financed by the fund is that at Letchworth (Garden City), where about 110 men are employed in excavating land for the new goods yard of Garden City. An area of 13 acres is proposed to be acquired by the Great Northern Railway Company for this purpose, and the levelling involves the removal of over 30,000 cubic yards of earth. The Unemployed Fund is paid about 1*s.* per cubic yard for the work, and this pays about half the expense of keeping the men and their wives and running the colony. This would appear to be the best result yet attained in providing employment under a charitable scheme.

MESSRS. GEORGE H. HILL & SONS, C.E., Manchester, have reported on the existing water supply to St. Andrews, N.B., and suggested extensions thereon. They assume that if an allowance of 50 gallons per head per day upon the maximum population be allowed, it would be a most liberal provision to make. On this basis the aggregate daily supply would amount to 500,000 gallons. The whole area of the valley down to the present reservoir at Cairnsmill is capable of producing 700,000 gallons a day if adequate storage were provided. Thus it would seem that the present drainage area is quite equal to the requirements

Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied. It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

ANTHROL

The result of much practical experiment has shown it to be the **most** efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

The ANTHROL COMPANY, Kinning Park, GLASGOW; and 6 Crosby Square, LONDON.

Digitized by Google

of the town, the deficiency being in respect of the works for utilising the same. It might be possible, they suggest, to make a reservoir at Lumbo Den, but they suggest that a supply of water from Dundee would be most economical and satisfactory. The town have appointed a committee to ascertain the terms on which a supply of water can be had from Dundee, and have appointed Mr. Henry Bruce, C.E., Cupar, to report on Lumbo Den as a site for a reservoir.

THE Leeds Town Council have prepared a scheme for extending and improving their sewage works at a cost of over a million sterling, independent of the land. It is estimated that thirty years hence the population of the city will be 600,000, and the treatment of the sewage is provided for accordingly, a dry weather flow of 24 million gallons daily and 120 million gallons in time of rain being indicated. The treatment proposed in the scheme embodies in the final stage a bacterial method, the estate—Templenewsam—being unsuitable for land treatment. The system of percolating beds has been found to be the most effective and the plan of precipitation has been decided upon, the effluent from the final treatment of precipitated sewage being found, by experiment, better than that from any other process. There were found to be under that plan less suspended solids, and the removal of solids before final treatment tends to prolong the life of the percolating beds. The scheme is in brief this—(1) chemical precipitation of the sewage; (2) filtration of effluent on percolating beds consisting of primary and secondary beds; (3) disposal of sludge by pressing into cake and laying in on the low-lying bed.

BUILDING AND BUILDERS.

THERE is stated to be a great excess of building workmen in San Francisco. Large numbers of additional men will not be required until about six months hence, when the work of reconstruction will have properly started.

THE building trade in Perth, which has been so stagnant for some considerable time past, now shows signs of a revival. Week after week numerous plans are being submitted to the Dean of Guild Court.

MESSRS. ARCHIBALD CONSTABLE & Co. will shortly publish "Chemistry of Paints and Paint Vehicles," by Mr. C. H. Hall. The book is written from the standpoint of a chemist actively employed in the manufacture of paints and colours, and it is a practical book for practical men.

THE Birkenhead Town Council have adopted a scheme for the erection of nine double tenement dwellings on the east side of Egerton Street, providing accommodation for 81 persons, at an estimated cost of 3,220*l*. The passage works would cost 295*l*., and the committee also recommended the formation of a playground at the rear of the buildings at a cost of 165*l*.

THE King's Sanatorium, near Midhurst, was opened by His Majesty on Wednesday. It was erected from the designs of Mr. H. Percy Adams by Messrs. J. Longley & Co., of Crawley. The whole of the sanitary fittings, which are of special importance in such an institution, were supplied and fixed by Messrs. Doulton & Co., Ltd. The Monks' Park stone used for the exterior and interior work was wrought and supplied by the Bath Stone Firms, Ltd.

PLANS for the second portion of Messrs. R. MacAlpine & Sons' big building scheme at Greenock were submitted to the Dean of Guild Court on Thursday. They show two large crescent-shaped buildings, occupying about two acres of ground at Ladyburn, and containing over 200 dwelling-houses. Fully an acre of the land is set aside for ornamental and recreative purposes, and there is a large recreation hall for the use of tenants.

THE will dated December 8, 1905, of Mr. John Dibble, of 115 Hagley Road, Edgbaston, head of the firm of Messrs. Dibble & Sons, builders, of Ledsam Street, who died at his residence on January 30, aged sixty-six, has been proved by his son, Mr. Samuel Henry Dibble, of Ledsam Street, builder, and Mr. George Sabell, of Henley House, Arden Road, Handsworth, the acting executors, Mr. Frederick Jones, the other executor, having renounced. The total estate is sworn at 73,782*l*., of which 8,359*l*. is net personalty.

THE tramway committee of Edinburgh Town Council recommend that a deputation of seven members should visit five or six of the English towns in order to study the varieties of electric traction, viz. overhead, conduit and surface contact.

ELECTRIC NOTES.

EUSTON STATION was for the first time lit up entirely by electricity on the 7th inst.

ACCORDING to an annual return prepared by the Swiss Government there were thirty cases of accident in connection with electricity. Of this number twenty-one had fatal results.

MR. W. R. COOPER, M.I.E.E., A.M.Inst.C.E., has accepted the position of editor of the *Electrician*, in the place of Mr. F. C. Raphael.

THE lighting and electricity committee of the Croydon Corporation recommend that application should be made for a further loan of 22,830*l.* for the purpose of increasing the plant and laying down further mains.

THE electric lighting committee of Edinburgh Town Council, following upon a report of Sir A. B. Kennedy, consulting engineer, and Mr. Frank Newington, resident engineer, have agreed to recommend the magistrates and Council that the reserve fund should be made up to its maximum amount at the earliest possible date, and, further, thereafter to provide a depreciation or suspense fund to the extent of 5 per cent. of the total capital outlay.

THE Council of the Royal Astronomical Society have passed the following resolution :—"That the Council learn with deep concern of the danger threatened to the Royal Observatory, Greenwich, from the erection of a large electric generating station near the Observatory, and desire to represent to the Admiralty at the earliest opportunity their conviction of the paramount importance of maintaining the integrity and efficiency of Greenwich Observatory, which has been adopted as the reference point for the whole world." It was further resolved that a copy of the resolution be forwarded to the First Lord of the Admiralty.

THE electrical imports of India during February last were as follows :—Electrical goods and appliances, 3,409*l.*; electrical cable, 3,236*l.*; electric-lighting fittings and accessories, 2,071*l.*; electric lamps, 651*l.*; electric meters and instruments, 458*l.*; electric machinery, 6,304*l.*; batteries and accumulators, 343*l.*; carbons, 36*l.*; telegraph and telephone materials and electric bells, 46*l.*; electrically-driven machinery, 3,830*l.*; tramways apparatus and materials, 1,604*l.*

CALMON ASBESTOS SLATE.

A PROOF of the eligibility of the Calmon asbestos slate for building purposes is found in the fact that about 80,000 square feet of it have been used for ceiling and partition-work in the new premises of Messrs. Waring & Gillow. The material is well adapted for work on a large scale, for, in addition to its fire-resisting qualities, it has a perfectly smooth surface and is uniformly white, and accordingly admits of decoration whenever necessary. There are several varieties, such as asbestos roofing slates, enamelled asbestos slate, fireproof insulating slabs for electrical purposes, fire-resisting and waterproof slate for external use and fire-resisting lining for internal use. A domed roof covered by the material can be seen at Winchmore Hill. It has been used in large areas to cover the roofs of pavilions and golf-club houses. There is no difficulty in fixing Calmon. A square of 100 feet does not exceed three-quarters of a hundredweight, and it is economical, for the prices vary according to thickness by a graduated scale. The appearance of the slabs must secure them a favourable consideration.

"MASTA" FOR PARTITIONS, CEILING SLABS, ETC.

THE ironstone measures found in the Midlands are among the treasures with which nature has endowed this country of ours. From some beds ironstone is obtainable which is largely used in the Dudley Works. Elsewhere are beds of coal, and at Bilston is fine sandstone. The peculiar refractory clays which are met with at Stourbridge are also invaluable for industrial purposes. Although called a clay, at least three-fourths of the constituents are silica. Their freedom from lime to a great extent is the cause of the power they have to resist heat without melting. Knowing the quality of the clay, which has been demonstrated so often in firebricks for furnaces, Mr. Thomas Ward, of Stourbridge, has been fortunate in discovering a method of applying the clay to partition blocks and ceiling slabs for

use in building. Their fireproof qualities can easily be tested by anyone. They have also the advantage of being soundproof, and a large-sized block weighs so little it will surprise the person who holds it in his hand. The material is tough and can be cut with a saw. Undoubted evidence of its resistance to fire was recently afforded in Mr. Ward's factory. Some frames on which the "Masta" slabs were drying caught fire. But although the fire lasted an hour and a half before the brigade could master it, there was little injury done to the building, and the damage to property did not exceed 50*l.* Another use which can be made of the material is for blocks to protect electric wires or gas tubing. The raw material is a product in which science and nature have combined, and we have no doubt that all who make use of "Masta" will be satisfied with the security it offers.

NEW CATALOGUES.

THE Hyde Electrical Manufacturing Co., Ltd., have no concealment about their specialties. The details which are given of their electric elevator gear would enable any intelligent reader to realise all the peculiarities on which they rely for success. In the same spirit, instead of saying that their lifts are economical, they give a photograph of a consumer's card in London, from which we learn that a passenger lift at Clarence House, Arthur Street, W., consumed during twelve months 765 B.T. units, the total cost being 4*l.* 15*s.* 7½*d.* There can be no stronger proof of economical working. Steel wire ropes are employed, but they are arranged in such a way that the wear and tear is reduced to a minimum. A patented method of control is employed, which allows of automatic release. It is guaranteed that failure of the motor, such as burning out of armature coils, or earthing of field windings is impossible. One advantage possessed is that in case a car is in charge of a passenger it cannot be interfered with, and provision is made so that it cannot be moved if any of the doors or gates are open. The patent safety gear is applied to all freight and passenger cars. For the use of architects and builders the company issue a series of blue prints, which will be supplied to responsible applicants, giving dimensions and arrangements of standard sizes of elevators, both for goods and passenger traffic, which are constantly in stock or in progress, and which can in consequence be supplied at a cheaper rate than in the case of a special design. The London agents are Messrs. Richard Woods & Co., Westminster.

THE Clutha Metal Works in Glasgow of Messrs. James Pyle & Co. turn out every year a very large number of cylinders, tanks and boilers. Some of them, unless we are mistaken, bring credit to a variety of firms to whom they are supplied. There are several patented improvements which are specialties of the firm, and it is claimed that the works are now the largest and best-equipped in the United Kingdom, and since the late fire have been fitted up with the most modern machinery, including electric lighting, electric motor-power, hydraulic rivetting and compressed air plant for caulking and rivetting. Mr. J. H. Pyle lately delivered a lecture on "Domestic Hot-Water Supply" in the Technical College, Glasgow. In the course of it he said:—"Copper is required where water is soft; iron is good enough where it is hard. Water varies even in districts quite close together, but generally in the West of Scotland it is soft, east of Scotland hard, east and south of England hard, in the English Midlands soft, north and extreme south of Ireland hard, Irish Midlands comparatively soft. The life of a galvanised iron tank (⅛-inch thick) in Glasgow is about two years, Ayr one year and Limerick twenty years, these variations showing that choice of metal in regard to water must be carefully considered. The axiom adopted by some that copper must be used if purity of water is desired is a mistake, for water containing a certain proportion of lime will maintain in an iron tank a purity equal to that in one of copper." As a result of a wide experience it is to be hoped the lecture will soon be published.

BUILDERS should have at hand the catalogues issued by John Harper & Co., Ltd., Willenhall. There are many varieties of useful appliances, which can be obtained at low rates. Some, such as the gutter brackets, are patented, and are adapted for general use. There is also a very ingenious door spring.

THE PALACE OF FURNITURE.

THE new building in Oxford Street which Messrs. Waring & Gillow have erected from the designs of Mr. R. F. Atkinson has been visited during the week by so many thousands of people, including readers of *The Architect*, few words are needed to describe an exhibition which is unique. Immense as is the block—for it covers a site of about 40,000 square feet of area, and contains seven storeys besides a basement—all parts of it are devoted to the display of furniture. The building itself is a remarkable success, for every room had to be assigned to a special purpose. It is not difficult to construct a great many rooms to contain furniture. But the peculiarity of the furniture palace is that several of the rooms display not only various styles of furniture, but each article is in its proper place, just as it would be in a residence. Those special rooms are decorated to correspond with the style of furniture. The new building, therefore, serves beyond any industrial museum in existence in suggesting the characteristics of style and the unity which should mark the different pieces of furniture. It is not to be supposed, however, that the museum practice is adopted of having only rare and very costly examples. Such suites as were exhibited in Paris, and which correspond with some of those now to be seen, are necessarily expensive. But Messrs. Waring & Gillow endeavour to meet the requirements of many conditions of men, poor as well as wealthy, and they demonstrate how they can furnish a week-end cottage for a sum that must appear as insignificant. There is no mystery or uncertainty about what a purchaser can acquire for his outlay, and there can be no mistakes in the account sent in. In preparing the furniture the most accepted examples have been utilised for inspiration. One chimney-piece recalls an example at Knole; a ceiling is a reproduction of one at Banbury; a side table is derived from one at Kensington Palace, and one salon recalls the Château de Rambouillet. In fact, examples in the spirit of the best English, French and Swiss work meet the visitor at every turn. The Colonial Adams style will of course appeal to Americans. In the carpets, hangings and textiles in general fine taste is likewise shown, and, considering the multiplicity of objects which are to be seen, the manner in which artistic style dominates adds to the value of the exhibition. Henceforth it is likely to be said that any article coming from the new building has acquired a guarantee of excellence, whether it is intended for the

Digitized by Google

kitchen or for the drawing-room. For it must not be supposed Messrs. Waring & Gillow have confined themselves to objects for pleasing the eyes. David Copperfield found the quest of furniture for his cottage a task, for his friends roamed all over London for articles, and then he had to travel as far to see the treasures. He came to the conclusion that time was wasted in his journeys after a kitchen fender and a fire screen. Many youthful Benedicts would agree with him. In the new series of rooms in the Oxford Street building the Copperfields of the future can find all the requirements for residences, whether great or small. A millionaire who is refined can also realise his dreams by acquiring furniture which is fitted to adorn the costliest mansion.

STEEL-FRAMED BUILDINGS.

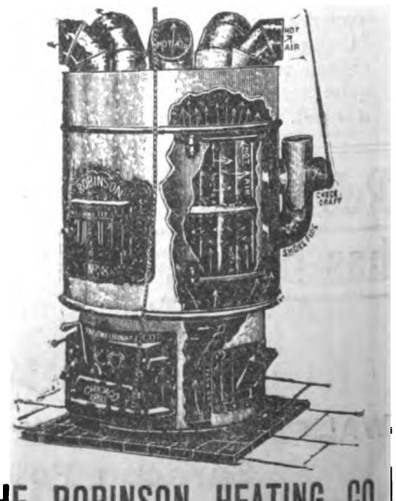
AN American writes to the *Manchester Guardian* as follows:—Many Manchester citizens, having no doubt noticed that a number of the new buildings in course of construction in town are being erected more or less in accordance with the American style of steel-framed buildings, may possibly have paused to congratulate Manchester architects and builders on their go-ahead methods. That steel construction possesses many advantages over the older methods of building goes without saying, and that steel-framed buildings have come to stay seems fairly certain. It is a pity, however, that many of the architects responsible should have adopted only part of the American system, and ignored altogether the all-important point in this construction, namely, the proper protection of the supporting and depending steelwork against fire and the use of fire-resisting materials wherever possible. In America the use of wood for joists, stairs, partitions, lathing, &c., is practically unheard of in steel buildings, all these parts being made of incombustible materials, such as concrete, terra-cotta, &c., and all steel is carefully protected. The neglect of these essential precautions is responsible for the serious loss attending fires in England and other countries.

It is surely strange that Manchester should be so far behind in regard to the by-laws; such buildings as are at present being erected in Manchester would not be sanctioned in London, Liverpool or Glasgow, and it is a pity the authorities and insurance companies do not take a firmer stand in the interests of the general public.

What would happen to such buildings in case of fire? Hundreds of tons of materials, supported on a few steel stanchions, usually unprotected by fire-resisting materials, and with wood floors ready to act as fuel to roast and buckle the steel, might be precipitated at any moment across the street below. Far better even the old type of building surrounded with thick walls; for though the interior may be burned out and the lives of the employés to a certain extent endangered, still the general public is safe and the streets are not liable to be obstructed.

SOCIETY OF ENGINEERS.

AT a meeting of the Society of Engineers held at the Royal United Service Institution, Whitehall, on Monday evening, June 11, Mr. Maurice Wilson, president, in the chair, a paper was read on "Submarine Groyning," by Gerald Otley Case, C.E., of which the following is an abstract:—



In opening, the author said that erosion was not confined to the visible shore between high and low-water marks, but took place to some extent also in considerable depths of water. He summarised the chief forces at work below low-water mark tending to cause erosion as being (1) unbroken or true waves of oscillation; (2) waves during or after breaking; (3) tidal or other currents. He thought the greatest depth of appreciable wave disturbance was about 100 to 150 fathoms. The transporting and eroding power of waves decreased as the depth of water increased.

Referring to current action he stated that the velocity of tidal currents was not as a rule sufficient to enable them to erode coarse material, but that they transported material stirred into suspension by the waves. Currents due to the flow and ebb of the tide were oscillating currents. The

conformation of the coast had a most important influence on the action of both waves and currents.

He then dealt with the generally accepted theory of deep sea erosion, which was that in many places erosion of the coast was caused by erosion going on in deep water, which, by undermining the foundation of the shore, caused the shore between high and low-water mark to slide into the hollow thus created. That theory was a fallacy; the power of waves and currents to erode decreased as the depth of water increased, and little erosion was going on in deep water. On the contrary, as a whole the oceans must be slowly filling up owing to material eroded from the coast and brought down by rivers being gradually spread over the ocean floor.

Referring to littoral drift, the author observed that material, in moving round the coast, was gradually worn away by attrition, the smaller particles being slowly carried seaward, fresh material eroded from the land keeping the supply fairly constant. The size of the particles composing the shore bottom and the amount of littoral drift both decreased as the distance from the shore increased. He concluded that waves were the chief cause of littoral drift, and were aided by currents. The direction of drift, while depending to a great extent on the conformation of the coast, was usually in the direction at which the preponderating waves struck the coast.

The author remarked that in his opinion adequate protection could generally be obtained by the application of a properly designed system of groyning, but he insisted on the importance of extending groynes below low-water mark. He did not, however, think it necessary or advisable to extend them beyond a depth of about 5 feet of water. It was most important to build groynes low at first, and raise them as accumulation took place, there being no advantages, but many disadvantages, in building them high in the first instance.

The author described the submerged fascine groynes erected in Holland, Heligoland and Mecklenburg, and gave information upon the cost and results of groynes. He then referred to fascine groynes erected in river estuaries, and gave details of groynes on the Danube. After describing Thompson's groyne, and briefly referring to the Allanson-Winn chain cable groyne, he discussed the durability of fascines and brushwood in groyne construction, giving particulars as to the life of such structures, and concluding that willow, brushwood, &c., were not suitable materials for groynes in this country.

Referring to erosion on the Italian coasts, the author described groynes erected on the Riviera di Ponente coast, and gave detailed information respecting same. He also described the submerged groynes erected at Penmaenmawr by the late Robert Stephenson, and the Case submerged groynes erected at Weymouth and elsewhere, describing different methods of construction which had been tried, and giving the results.

After pointing out the disadvantages of using wood and exposed iron in submerged groynes, the author expressed the opinion that ferro-concrete was the material of the future for marine works. He then described the method of constructing groynes in ferro-concrete, introduced by Dr. Owens.

In conclusion, the author said that the merits of any system of groynes could not be judged by the accumulation brought about in a short time, but by their ability to hold the accumulated material for a considerable period, and by the cost incurred in maintenance. He pointed out that coast erosion was caused by a combination of circumstances and forces, all of which should be considered before devising any scheme for combating the erosion. He, however, thought that there was a guiding principle which should be kept in view, namely, that it was almost useless to oppose the forces of nature; the sea had a constructive as well as a destructive power, and could often be made to build up a natural defence of sand and shingle.

SUBSIDENCE AT BILSTON.

SEVERAL years ago the Bilston District Council found that it would be necessary to embark on a heavy expenditure in order to deal with the sewage of the town. The final decision was held over as long as possible, but about a year ago it was agreed to deal with the removal of the sewage on the deep drainage principle. The contract was given to Mr. H. Holloway, of Wolverhampton, who has had a lengthened experience in this class of work, and he at once set a large number of men to make the necessary

excavations in which to lay the pipes. The opening up of the streets in the centre of the town has led to many revelations, and quite a scare has been caused owing to its having been discovered that only a short distance below the roadways and many of the public and other buildings in the centre of the town the ground is honeycombed as the outcome of mining operations in the dim and distant past. When the track was being prepared for the new pipes in the neighbourhood of the Lunt it was found that the timber supports in connection with the old sewage scheme had rotted away, and the old course was tapped, with the result that a number of houses in the neighbourhood of Gozzard and Bissell Streets were flooded, and a steam pumping engine had to be requisitioned for a long time in order to divert the sewage from the old course to the new one. Getting nearer to the centre of the town, the contractor found a number of obstacles in the shape of pillars of coal, and in some cases solid bodies of coal, and he has not only been able to obtain a large quantity of useful coal, but has been called upon to pay the mines drainage rate on the mineral raised.

The sewerage excavations pass the town hall and all the principal public buildings, and a few weeks ago, says the *Birmingham Daily Post*, a subsidence occurred near the town hall in connection with one of the shafts which have been sunk in order to proceed with the necessary tunnelling, and four men were entombed, but they were fortunately rescued in a few hours' time, and they escaped without receiving any serious injury. No serious danger to buildings was anticipated owing to the sewage operations until indications presented themselves that the pavement near to the town hall was being cracked, owing probably to the excavations having disturbed the old foundations. Subsequently the alarming discovery was made that the town hall was showing signs of subsidence. This building is situated in the centre of the town, and has close to it the offices of the magistrates' clerk and the Metropolitan and District Bank. It was erected about thirty years ago, and stands at the junction of Lichfield Street, Swan Bank and Church Street. It was also noticed that the ceiling and side of the spacious council chamber displayed a large crack varying from one-eighth to half an inch in width, and there were other indications that the building was being undermined. Outside the building, too, it was seen that the footpath in Lichfield Street had sunk several inches in a few places.

The officials of the Council at once held a consultation, a special meeting of the District Council was hastily convened, and the excavation and tunnelling works were inspected under the guidance of Mr. Green, the surveyor. The examination showed signs of the supports in Lichfield Street having to some extent crumbled away during the previous forty-eight hours, with the result that the roadway and the town hall had been left, it was believed, in a somewhat insecure position. The members of the Council at once took steps to, as far as possible, prevent any further damage to the building, and a large quantity of timber was obtained and the structure propped up. One of the members of the Council, who has had a long experience as an engineer, expressed the opinion that the work of the contractor had resulted in the air reaching the old coal ribs and pillars beneath the town hall, and they had become of a more friable nature. Every precaution is being taken by the contractor and the officials of the District Council to prevent any further subsidence of the ground in the neighbourhood of the town hall and other buildings in the neighbourhood beneath which the coal mining operations have extended, and where large spaces are left from which the coal has been abstracted. Only a few yards from the town hall is the parish church of St. Leonard, which has a massive tower, and it is to be hoped that this ancient fabric will not be jeopardised.

THE ECOLE BOULLE, PARIS.

THE great technical school of Paris, says a correspondent of the *Scotsman*, is the Ecole Boulle, called after the famous French cabinetmaker of the seventeenth century. The school was founded in 1886 by the city of Paris Municipal Council, and its results during the last fifteen years are said to have been of the most satisfactory character.

First, a word as to the building. It is in the Rue de Reuilly, far removed from the centre of the city, in the East End of Paris, a mile or more beyond the Gare de Lyon, but still easily got at by the Metropolitan Underground Railway

and other means of communication. The site, which is a large one, was the property of the city, and the building, which is of great size, cost 1,600,000 francs, or 64,000*l.* Little of this money has been expended on superfluous architectural adornment. The building, set well back from the streets 100 yards or so, has a simply-designed stone front, with a fairly ornate doorway; to the back it is of brick, and in the internal construction iron girders are freely employed. In form it is an "E," without the middle stroke. It has a basement for kitchen, storage and heating apparatus, a street floor and two storeys above, all the ceilings of which are lofty; from the windows at the back a view of the open country can be obtained. The three storeys are divided into a series of halls of various sizes, well lighted and ventilated, in which the pupils are instructed during a long day, lasting from eight in the morning until six at night, with a short break in the forenoon for lunch and a shorter interval in the afternoon for a distribution of bread ("a piece," as we would say in Scotland). It looks a long working day for youths and for six days in the week; but actually it is not found to be productive of any ill effects on their health. The boys themselves are said not in the least to object to it, and, indeed, consider the time passed in the college each day to be by no means too protracted.

The teaching in the Ecole Boulle is entirely free. The pupils are selected by competitive examination from the primary schools, and as the numbers are limited there is always a keen rivalry for admission to the school. French parents are only too sensible of the advantage to their boys by gaining admission to the college. There are two sections in the school—one for furniture (Section du Meuble), which was opened in 1886, and the other for artistic metalwork (Section du Métal), added in 1895. The number of pupils received each year is 102, of which sixty are for the furniture section and forty-two for the metal section. All must be the children of parents residing in Paris or the Department of the Seine, and be, on admission, not less than thirteen and not more than sixteen years of age. As the course is one of four years, 100 admissions in the year would work out a roll of 400 pupils, but as a matter of fact there are generally fewer. The entrance examination to the college is in three parts—(1) dictation, to show the pupil's general acquaintance with his own language; (2) problems in arithmetic; and (3) a drawing from the plaster cast. This last test is a guarantee that the boys have profited by the art instruction given in the primary schools, and are able to take advantage of the advanced teaching which they will receive in the Ecole Boulle if they have the good fortune to be admitted to it.

The course of study is one, as has been said, of four years, and judging by the printed programme and by what we saw on a visit to this great school, it appears to be of a thorough character. It is divided into two parts—(1) general technical instruction, in which all the pupils participate, and (2) the specialised teaching in particular trades. The former is imparted in the forenoon, the latter in the afternoon. After four months in the college, the pupils (or their parents or guardians) elect which trade they desire to follow; but if more seek admission to the furniture side than the sixty already referred to, there is another competition. The general technical teaching comprises the revision of what has been learned in the primary schools, geometry, technology, industrial economy, the history of art, design in art, water-colour, modelling as applied to furniture making, industrial design (plans, estimates, &c.), and composition in its various applications. All the pupils get this general course, no matter what their particular trade is to be For example, all have to pass through the modelling shop, not necessarily spending a large part of their time there, but still sufficient to enable them to handle the clay, and to learn practically something of plastic art as applied to their particular industry. Great store is also set on composition, so that the eye is trained to produce an artistic *ensemble*. Indeed, the training of eye and hand to act together is one of the things aimed at in the general course. Then the trades which are practically taught are, in the furniture section, cabinet-making, upholstery, wood-carving and carving in stone and carpentrywork as specially applied to chairmaking. On the metalwork side of the school we have chasing and repoussé-work in various metals, clock-making in all its branches (for which Paris has always been famed), engraving on steel by means of punches and matrices, engraving on gold and silver plate and jewels, and turning in metal, ivory, plaster and wood. There is a certain amount of "give-and-take" also among the trades by way of broaden-

ing the views of the pupils. At different times the pupils pass a certain fixed time in ateliers auxiliary to their own professions. The furniture pupils spend a period in the turning shop, and the metalworkers pass some hours a week among the carpenters, and, as indicated, all get an idea at least of modelling in plaster. Every two months there are examinations in the subjects treated during that time, either by written papers or by drawing and modelling; and there are more formal examinations twice a year. No pupil can proceed to a higher grade unless he passes these tests. Then to still further aid their studies the pupils visit at intervals, under the care of their professors, the museums, palaces and monuments of Paris or the provinces, which can by their beauty or their character assist the teaching of the school. They visit also the factories where are prepared the material for manufacture.

The director of the school is M. Moulie, a gentleman apparently proud of his position, and full of enthusiasm for his work. It was afternoon when we visited the Ecole Boulle, and the place seemed a hive of artistic industry. The practical work was in full operation. In one hall were pupils engaged in making the frames of chairs, in another were upholsterers stuffing and sewing them; machinery everywhere was whirring with a cheerful sound. In other halls the lads were doing repoussé-work, modelling, wood carving, planing, clock-making (especially the frames in various styles), engraving, turning, &c., and a busier and brighter set of lads it would have been difficult to find. They seemed thoroughly interested in their work, and showed and explained it with pleasure to the visitors. Some of the other lads were engaged in making designs for furniture and window hangings, which would afterwards be worked out in wood and tapestry. Others, who had made such designs before on paper, were engaged in corridors set apart for the purpose in giving them form with actual draperies. Several pupils were engrossed in working out estimates of their designs—so much for cloth, so much for trimmings, so much for labour, &c. One interesting piece of completed work we saw was a bedroom furnished in the Louis XV. style, all the work of the pupils, the material of which had cost the school about 1,200 francs. The price of material, it was explained, added greatly to the current expenses of the school. Nothing that is made by the pupils is sold outside. That would be entering into competition with the regular merchants, and is not allowed. When a chair, for example, is completed and passes inspection, it is just taken to pieces again. The work made by the pupils was certainly exceedingly artistic; and at present there is a furniture exhibition at the Hôtel de Ville in which the chief prizes have been carried off both for design and manufacture by the Ecole Boulle. The pupils of the Ecole Boulle, as may be readily conceived, have no difficulty in getting good situations after they leave school. The wastage in the numbers in the school is due to the fact that the lads can find well-paid work before their four years' course is finished, and when their parents are not too well off there is always a temptation for them to accept it. In truth, the Ecole Boulle is training the future foremen of the ateliers of Paris in the trades and professions it deals with; and the director assured us that its effect on the *morale* of these establishments and on the workmen in them had been of the highest character. Bursaries are given in some cases where the family circumstances are not too good, to enable the lads to remain in the school during the whole course; and to the youths who pass the final examinations with credit, gifts of the tools of the trade to which they belong are also made. Diplomas are granted, and those who receive them are exempted from a year's military service. From 8 A.M. to 6 P.M. the pupils are not at liberty to leave the school. They are provided in a large dining-hall on the basement with a "grand déjeuner" at 11.30 A.M., for which they pay 5*d.*, and they have their "piece" in the afternoon. If a pupil is poor he can be relieved of paying for his meals. In connection with the school there is a library, a gallery of ancient and modern casts, and, indeed, the equipment is generally of a most complete kind.

So far as one can make out the expense of the school to the city of Paris may be put down at 10,000*l.* a year, but that figure is only an approximate one. It was also stated at about 40*l.* per annum per pupil, a sum which does not include the interest on the cost of building and site—only current expenses. These, it was explained, were large on account of the many professors and masters necessary because of the specialisation of the industries and the cost of material on which the labour of the pupils is employed.

Well finished!

A job finished with Hall's Sanitary Washable Distemper is well finished. It is finished for health and finished for beauty. It remains clean, sweet, and fresh, because

Hall's Sanitary Washable Distemper

is washable, is dust and germ proof and neither fades nor changes colour.

The Hall's Distemper of to-day is better than ever, year by year it has improved its many admirable qualities; its composition has been altered wherever the experience gained by severe scientific and practical tests and in the making of thousands of tons per annum have shown improvement to be possible.

Better than ever because—

It mixes more readily,
Works more easily,
Covers more effectively,
Dries more quickly.

Hall's Distemper is used and recommended by leading Builders and Decorators. It is made and stocked in 73 distinct colours ready for immediate delivery in any quantity.

HALL'S Sanitary Washable DISTEMPER

The Real Sanitary Water Paint.

Hall's Distemper is the real Washable Distemper. It was one of the first invented, and is to-day better than ever, because the Manufacturers have, by reason of many years of scientific and practical tests, continually improved its manufacture until perfection has been attained.

Hall's Distemper is made in two qualities—the inside quality is specially for interior wall decoration, the outside quality being most suitable for all other purposes, both inside and out, whether on wood, stone, brickwork, or any kind of building material.

Its utility for Farm and Estate Buildings, such as dairy and tool-sheds, kennels, barns, shooting boxes, and temporary buildings of all sorts, is remarkable.

Full particulars of Hall's Distemper, in the form of a beautiful booklet, entitled "Modern Development in House Decoration," will be sent post free on application to the Sole Proprietors and Manufacturers,

SISSONS BROTHERS & CO., Ltd., HULL.

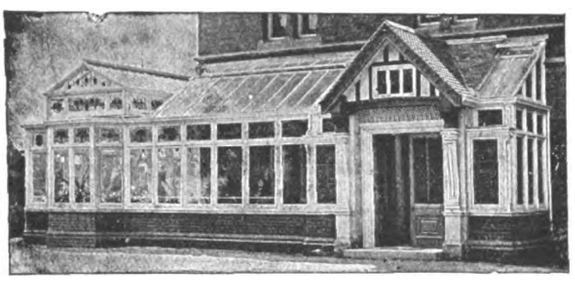
AWARDED SILVER MEDAL, SANITARY INSTITUTE, 1902.

THE BRITISH SANITARY CO.'S NEW AND IMPROVED SELF-ACTING EARTH CLOSET.

HIGHEST AWARDS:

Birkenhead, 1881; Newcastle-on-Tyne, 1882; Glasgow, 1883; Dublin, 1884; Plymouth, 1885; Edinburgh, 1886; Glasgow, 1887; Haddington, 1892; Liverpool, 1894; Newcastle-on-Tyne, 1896.

For Simplicity and Efficiency their Closet stands alone.



Medal from the Society of Architects, London, for superiority of workmanship and materials used in manufacture of Closets.

ITS ADVANTAGES ARE:—

1ST. The simplicity, strength of the mechanism, and non-liability to get out of order. 2ND. It is self-acting. 3RD. The effective distribution of the deodorising material thoroughly covers and absorbs all offensive matter and smells. 4TH. The large capacity of the containing magazine holding the earth or other deodorising material. 5TH. The very moderate price it can be sold at as compared with other closets not even possessing the above advantages.

PRICE LIST AND FULL PARTICULARS SENT ON APPLICATION TO

THE BRITISH SANITARY COMPANY, 341 BATH LANE (at Charing Cross Station), NORTH STREET, GLASGOW.

DOULTON'S "IGNIS" BATH HEATER

IN COPPER.

No. 1497.

Bath heaters are of the greatest benefit in a house even though there is a system of hot-water circulation. The use of gas for cooking, &c., through a great part of the year, saves the ordinary firing and thus stops the hot-water supply. In such cases a bath heater is most serviceable, as a hot bath can be had at any time, at a minimum cost and without any trouble.

To meet this special demand Messrs. Doulton have made a heater that is both cheap in price and lasting in wear.

All parts are made in stout hardened copper, tinned inside.

The water in no case comes into contact with the gas.

Ordinary burners are used for heating instead of Bunsen's or atmospheric.

Cold water is raised 55° in passing through the heater, but water of a higher temperature can be obtained if the quantity is reduced.

The flow of water should be regulated by a stop cock, so as to give the amount of water required and no more,

PRICES.

No. 1497.	Polished copper heater to give 1½ gallons per minute	£4 15 0
No. 1497A.	Polished copper heater to give 2 gallons per minute	5 10 0

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 P.M. *on Thursdays.*

NEW CATALOGUES.

THE Carron Company are so comprehensive in their operations they produce works on a small as well as a large scale of many varieties. Their latest catalogue relates to heating apparatus for laundries and other places where a strong heat is required in a limited area. It describes a specially designed laundry-stove and drying-closets which are well adapted for hotels and public institutions. In the centre is the stove, and on either side is the drying-chamber arranged on rollers and rails to enable it to be opened and closed with facility. Like other examples of this company, the stove when closed presents an exterior by which it is not out of place in modern buildings where style is respected.

THE demand for descriptions of the Waygood lifts must be continuous, for a new edition of their catalogue has been issued. The adoption of their system for the Hearts of Oak Benefit Society and the King Edward VII. Sanatorium, as well as in the steamship *Lusitania*, all of which were opened within a few weeks, will, no doubt, still further win public favour for the lifts.

THE Leicester Town Council are considering a scheme to take over three high schools in the town, with their endowments, and build an intermediate school for girls and day training college for teachers. The college is estimated to cost 40,000*l.*, of which the Government will provide 30,000*l.* This will form a municipal college and eventually will become a university college by affiliation with Birmingham University.

BUILDING AND BUILDERS.

MESSRS. PATMAN & FOTHERINGHAM, LTD., contractors, 100 and 102 Theobald's Road, W.C., have been successful in obtaining the following rebuilding contracts:—Fowkes Buildings, Great Tower Street, E.C.; Seamen's Mission Hall, Tilbury Dock; Lyric Tavern, Shaftesbury Avenue, W.C.; large mansion, Cookham Dene, Bucks; 57 and 59 Great Portland Street, W.

TENDERS will be received up to June 30 at the office of the High Commissioner for New Zealand, 13 Victoria Street, S.W., for the construction of a tunnel about 5 miles 25 chains in length at Arthur's Pass, through the dividing range between Canterbury and Westland, on route of New Zealand Midland Railway. This tunnel is to be through the main central range of mountains of the Middle Island, and form part of a partly completed railway connecting the East and West Coast districts. The railway is opened for traffic to within 2¼ miles from the Western portal. It is proposed to work the tunnel section of the line by electricity generated from the water-power available in the Otira river.

THE Directors of the Crystal Palace Co. are considering the advisability of holding an International Exhibition of all trades connected with building during the spring and summer of 1907. If adopted the exhibition would give persons participating in it an opportunity of bringing their specialties before all persons connected with the building interests for a much greater period of time than has been the case at any ordinary trade exhibition, which generally lasts only a few days. An endeavour, we hear, is to be made to bring together manufacturers of building materials and architects, and an international jury will be appointed who will make awards according to the merits of the exhibits, and thereby afford the persons participating an opportunity of obtaining something like a hall-mark of the excellence of their wares.

PLYMOUTH borough asylum has been extended at a cost of over 32,000*l.* The asylum, which is fourteen miles from Plymouth, was completed in 1891 at a cost of 50,000*l.* The new addition, for 200 patients, consists of three wards on either side of the old building. There are new visiting-rooms, a sewing-room, an extension of the attendants' mess-room, a general bathing-house, dressing-rooms, night attendants' quarters, additional boiler accommodation, new electric-light station, &c. The new parts are generally built of brick with hollow walls, faced with Pinhoe bricks, and covered with a slate roof, the upper floor ceilings being fireproof. The corridor pavings and the staircases are of granolithic concrete, and the floors of the buildings generally of pitchpine. The sanitary annexes and the bath-house are lined with tiles, the fittings being of Messrs. Doulton's manufacture. The contract was let in 1902 to Messrs. Dart & Pollard, of Paignton, for 32,126*l.*, and on their failure the work was finished by the trustee of the estate through Mr. W. H. Lethbridge. The heating and engineering work, fire mains and hydrants, were by Messrs. J. Weeks & Co., Chelsea. Messrs. Odger & Blake were the architects.

ELECTRIC NOTES.

ABOUT 250 applications have been received for the post of electrical engineer at Whitehaven, rendered vacant by the resignation of Mr. P. J. Watt. The salary is 250*l.*

THE Municipal Council of Umtata, South Africa, is prepared to receive tenders for the lighting of the town of Umtata by electricity or acetylene gas. The six months' notice expires on August 31.

THE Stafford Town Council have awarded the officials and workmen of the electric-lighting department a bonus of 6½ per cent. on their wages in accordance with their profit-sharing scheme.

THE Mayor of Westminster on the 16th inst. opened an elevated garden which has been constructed on the roof of the transforming-station of the Westminster Electric Supply Corporation, in accordance with the conditions imposed by the Duke of Westminster when he let the open space in Duke Street, Grosvenor Square, for the purposes of an electric station.

MR. W. E. MILNES, of Gateshead, has been selected to fill the appointment of commercial assistant on the staff of the Birmingham Electric Supply Department. The office, which is worth 300*l.* per annum, is created in the place of that of engineering assistant, since the committee recognised

THE "DRAWWELL" GRATE

WAS PLACED

First in the Final Tests

at the recent test with Firegrates at the New Government Offices in Whitehall, under the direction of a sub-committee of the Coal Smoke Abatement Society, in conjunction with Sir Henry Tanner and a committee of experts, for smoke abatement, heating power, fuel economy, and suitability for public and private buildings.

N.B.—All Grates bear the Trade Mark and Name of "Drawwell" on firebrick to insure against imitation.

This Grate can only be supplied through Builders' Merchants, Ironmongers, &c., but Drawings and Particulars can be obtained from

J. & R. CORKER, Ltd.,

GENERAL IRONFOUNDERS, Ferham Works, ROTHERHAM.

London Showrooms, Saracen's Head Buildings, Snow Hill, City,

W. B. CLARKE, Agent, where the "Drawwell" can be seen in action.

Digitized by Google

the necessity of developing the commercial side of the city's electrical undertaking. There were 431 applicants for the post.

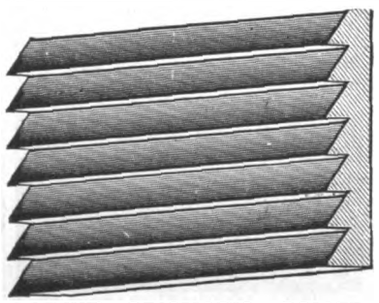
MR. J. R. P. LUNN, general manager of the Darlington Corporation Tramways, and electrical engineer, says in his annual report:—Regarding the tramway revenue, the total cost per mile (excluding interest and sinking fund) was 4.73*d.*, which was the lowest cost per car mile on record, the next lowest being 5.11*d.* at Stockport. The average of all published costs per car mile (comprising eighty-seven systems) was 6.4*d.*

THE Grimsby borough electrical engineer, in reporting the receipt of the Local Government Board's sanction for the borrowing of some 16,000*l.* for extensions in connection with the electricity undertaking, pointed out to the committee that the Board had disallowed 227*l.*, which was for the time of the permanent employés of the department. The Board said that all such time must be paid from revenue. The same work, however, if carried out by a contractor, would be allowed out of capital account. It was resolved to appeal to the Board to reconsider their decision.

MR. CHARLES BRADFORD, in the course of his presidential address on Tuesday at the annual conference of the Institute of Gas Engineers, said that although the actual cost of lighting by electricity during the past year showed very little diminution, they could not tell when some new and important development, either in the cost of generating electricity or in its application, might occur. It might be that some epoch-making discovery, as important to the electric-lighting industry as the invention of the Welsbach mantle was to their own, might entirely revolutionise the present methods of electricity supply.

MR. P. C. COWAN, M.Inst.C.E., chief engineering inspector, Local Government Board, held an inquiry in the town hall, Rathmines, respecting the application of the Urban District Council for a loan of 23,000*l.* for the purpose of extending the electric-lighting system in the township. Mr. Spencer Hawes, M.I.E.E., of the firm of Messrs. Robert Hammond & Son, electrical engineers, London, stated that the principal feature of the present scheme was the extension of the feeder system which became necessary at this stage in the development of their undertaking. He had estimated the financial result when the scheme would be completed in March 1909. The present capital expenditure was 85,195*l.*, and when the scheme was completed it would be 109,600*l.*, and they expected to have a surplus to the good of over 500*l.*

MR. H. R. HOOPER, inspector of the Local Government Board, held an inquiry at the Salford town hall into the application of the Corporation for sanction to borrow 7,720*l.* for extensions at the Frederick Road electricity generating station. It was explained that the station was opened in 1901, and there had been such an increase in the demand for the supply of current for private and other purposes that additional plant was now required. Up to the present the electricity scheme had cost 555,409*l.*, and the outstanding debt was 484,289*l.* The chairman of the committee said that the reduced charges had resulted in the Corporation receiving a big demand for current for power purposes.



MR. PRICE WHITE, the Bangor municipal electrical engineer, having been offered a situation elsewhere at a salary of 300*l.* a year, a special meeting of the Bangor City Council was held recently to consider the position, when it was unanimously resolved that Mr. Price White be offered an additional appointment as assistant gas engineer at the expiration of two years, Mr. Smith, the present gas manager, to be appointed consulting engineer, and Mr. White, manager of both lighting undertakings at that time, Mr. White to receive a salary at the rate of 250*l.*, to be increased at the rate of 10*l.* per annum up to 300*l.*, and Mr. Smith as consulting engineer to receive 100*l.* per annum. Mr. White accepted the Council's offer.

THE Walsall Town Council on the 11th inst. decided to reconstruct the tramway lines from Bloxwich to the Pleck, worked by the Corporation, with double instead of single track at an estimated cost of 26,076*l.*, and that the lines leased to the South Staffordshire Tramways (Lessee) Company be reconstructed, and the electrical equipment renewed at an estimated cost of 12,068*l.*, subject to the company agreeing to pay an increased rental of 500*l.* per annum, to reconstruct their own lines to Wednesbury and Darlaston, and to satisfactory terms being arrived at with the company for through communication between Walsall, Wednesbury and Darlaston, or Bilston.

A LOCAL GOVERNMENT BOARD inquiry was held at Clacton last week in reference to an application by the Urban Council for powers to purchase a private electric-lighting undertaking which has been established some years. A system for providing the public with current for lighting and power purposes has just been installed by the Council. When the Council obtained their electric order in 1900 they did not obtain powers to purchase the private concern, because they never contemplated that the owner would use it excepting for lighting a row of shops owned by him. Latterly, however, he had been supplying other premises with current, and apparently there were no means of preventing him excepting by a tedious and expensive law suit. There was no opposition to the application, the Council and the owner of the private concern having provisionally agreed to a price for plant and goodwill.

VARIETIES.

THE King has expressed his approval of the new public baths in Newcastle-under-Lyme being styled the King's Memorial Baths, and has granted permission for the emblazonment of the royal arms on the principal window of the large swimming bath.

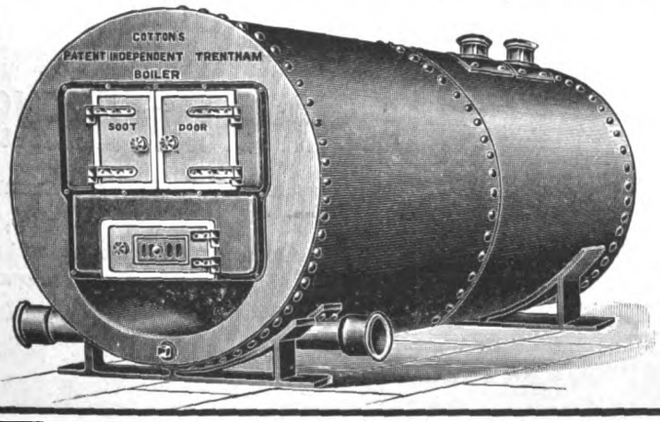
A SPECIAL committee of the Huddersfield Town Council has been appointed to consider the whole question of housing in the borough.

THE Local Government Board have approved a scheme for the erection of a new pavilion at Weymouth. It has been practically decided to model the pavilion on the same lines as that of Weston-super-Mare.

MR. HENRY OVERTON WILLS, of Kelston Knoll, near Bristol, has promised a contribution of 10,000*l.* towards the foundation of a university at Bristol. Lord Winterstoke and Mr. Joseph Storrs Fry have promised 10,000*l.* each, and Sir Frederick Wills and Mr. Francis J. Fry 5,000*l.* each.

AT a public meeting in Birmingham last week it was resolved:—"That a society called the Birmingham Playgrounds, Open Spaces and Playing Fields Society be formed, for the purpose of providing playgrounds, open spaces and playing fields in the congested districts of Birmingham and suburbs, for preserving similar spaces in those parts of the city not yet fully developed, and for securing playing fields from time to time."

A RECEPTION by the president (Mr. George Langridge) and the Council of the Surveyors' Institution was held on Tuesday last at the gardens of the Royal Botanic Society, Regent's Park, when a numerous and distinguished company attended. The entertainment afforded was highly gratifying, including a selection of music by the Royal Artillery band and the Red Imperial string band, and a very enjoyable afternoon was spent.



THE Prestwich (North Manchester) guardians have been informed by the Manchester city treasurer that the finance committee would be prepared within the next two years to lend to the guardians the sum of 72,172*l.* for thirty years and 13,400*l.* for fifteen years at 3⅝ per cent., such loans to be repaid by half-yearly instalments, it being understood that not more than 40,000*l.* would be required before March 31, 1907. The offer was accepted. These loans are for the new workhouse infirmary.

ARRANGEMENTS have now been completed for the next course of advanced instruction for plumbers who are teachers or likely to become teachers, at King's College in the summer. The course will commence on Monday, August 13, and occupy four weeks, terminating on Saturday, September 8. Several county and borough education committees have granted scholarships to enable suitable students to attend, and early application must now be made by advanced student plumbers desirous of being enrolled for the course.

THE Council of the London Chamber of Commerce have adopted a resolution urging that in order to secure more efficient and economical maintenance of main roads the State should establish a central highway department which should administer a Government grant in aid of the maintenance of the trunk highways. The resolution also contained a proviso that motors should contribute to the maintenance of the roads, and that the fines inflicted by the magistrates on motorists should be appropriated to road improvement.

A SELECTION committee consisting of Sir Philip Hutchins Colonel Sir John Ottley and Sir Guilford Molesworth, have appointed the following candidates as assistant engineers on the permanent staff of the Public Works Department of

India, subject to their satisfying certain requirements as to medical examination, ability to ride, &c. :—Albert Francis Louis Helfrich Harrison, Edwin Samuel Crump, George Wright Norton Rose, Robert John Angus, Henry Wray Sandes Smith, Ivor Parry Davies, Henry Bedford Evington, William George Yeaman, Henry Vere Shirley Dillon, Claude Cavendish Inglis, Peter Erbin Williams.

AT the last meeting of the Manchester City Council Sir Bosdin Leech, chairman of the waterworks committee, drew the attention of the Council to a resolution passed by the committee that in view of the increasing demand for water in the city and the district of supply, and the fact that the third pipe from Thirlmere will not be completed for several years after the work of laying is commenced, it is undesirable at present to extend the consumption of water in connection with the extension of the water-closet system. This resolution was eventually deleted as a retrograde step in the municipal efforts to promote sanitation.

THE Incorporated Association of Municipal and Consulting Engineers (Scottish District) visited Berwick on the 15th inst., where the annual meeting of the members took place in the museum. Before proceeding to business the members of the Association visited the town hall. At the annual meeting Mr. Holmes, burgh surveyor, Govan, presided, in the absence of Mr. Collins, Norwich, the president. Two papers were submitted for discussion, one by Mr. R. Dickinson, borough surveyor, Berwick, on "The Municipal Works of the Borough," and another by Mr. A. H. Goudie, burgh surveyor, Stirling, on "The Plan and Register of Streets as Provided for in the Burgh Police (Scotland) Act, 1903."

AN inquiry was instituted at the Council House, Birmingham, last week, by Mr. R. H. Bicknell into an application to the Local Government Board for sanction to borrow 42,796*l.* for works of paving and 3,638*l.* for the reconstruction of public sewers. It was mentioned that the public works committee found that in consequence of the tramways reconstruction they had available about 4,000 tons of granite setts, and it was proposed that these setts should be re-dressed and used for the purpose of paving certain streets. It was hoped that when re-dressed and relaid the setts would last for twenty years or more. It is estimated that this will involve a total expenditure of 21,421*l.*

THE Birkenhead Town Council propose to obtain their new water supply from the river Alwen, which rises in Llyn Alwen at an altitude of 1,251 feet, and takes a south-easterly direction to Pont-y-Alwen. The river Alwen joins the river Dee at Llangar, which is about a mile south of Corwen. The scheme is a vast one for Birkenhead to undertake. The scheme has been devised by Mr. G. Deacon, and it is divided into three sections. The first involves an outlay of 750,000*l.*, and will provide 8,000,000 gallons of water daily. The second will cost 545,000*l.* and yield nearly 6,000,000 gallons of water daily, and the third will cost 464,000*l.* and yield from 4,000,000 to 5,000,000 gallons daily.

JUDGE HARINGTON at the Birmingham County Court recently dismissed an action brought by the Staffordshire County Council against the Seisdon Rural District Council, in which he was asked to grant an order against the District Council to prevent the pollution of the river Stour. His Honour pointed out that the river flowed through the village of Kinver, which consisted of about 230 houses and had a population of 1,500. The village had no drainage scheme, and in some instances there were no means of sanitation. A drainage scheme would cost 6,000*l.*, and he did not think he would be justified in putting the ratepayers to such an expense. He was of the opinion that the County Council had not shown that there was any appreciable pollution to the river. The action would therefore be dismissed with costs.

CAPTAIN J. H. THOMSON, chief inspector of explosives, on Saturday issued his report on the accident which happened last March on the Dearne Valley Railway being constructed at Loversall, near Doncaster, and resulted in the death of three persons and slight injury to five others. Captain Thomson's conclusions are that the accident was due to the striking of an unexploded portion of a charge which remained in the débris after blasting. The presence of the explosive in the débris may be accounted for by the falling in of rock fragments in the borehole during charging, whereby a portion of the charge became separated and escaped detonation. Such accidents are of common occurrence, and must be regarded as inseparable from the opera-

tion of blasting. No further precaution, says Captain Thomson, likely to diminish the number of these accidents can be suggested.

THE Widnes Town Council have decided further to reduce the cost of their gas, which is already claimed to be the cheapest in the world. After July 1 the charge to consumers of 3,000,000 cubic feet and upwards per annum will be reduced from 1s. 2*d.* to 1s. 1*d.* per 1,000 cubic feet. To smaller consumers the cost will be reduced from 1s. 4*d.* to 1s. 2*d.* per 1,000 cubic feet, and to consumers for motive-power purposes from 1s. to 11*d.* per 1,000 cubic feet. The value of this reduction amounts to 1,500*l.* per annum, 900*l.* of which goes to the ordinary consumers and 600*l.* to the slot-meter consumers. Gas is used for heating, cooking and lighting purposes in practically every working-class house in Widnes. The profit made on the plant by the Corporation for the year ended March 31 was 4,703*l.*

A CONFERENCE of local authorities and chambers of commerce of the Midland Counties will be held at the Council House, Birmingham, on July 5. The circular of the Birmingham Chamber of Commerce convening the meeting suggests that the discussion should as far as possible be limited to the following propositions:—(1) That, in order to provide healthy competition with railways, it is desirable that a complete system of through communication by water should be provided between centres of commercial, industrial, or agricultural importance and between such centres and the sea. (2) That, having regard to the national importance and benefit of such a system, it is desirable that the canals should be acquired and controlled by the Government, or by a public trust on which the Government would have a preponderating vote. (3) That in either case the interest and sinking fund on capital expenditure should be guaranteed by the Government.

THE general works and highways committee of Nottingham Corporation, in a report on a proposed new Forest valley outfall sewer, state that the outfall sewer extending from the junction of Tavistock Drive along Mansfield Road and the Gregory Boulevard to Alfreton Road, although sufficient to carry the average drainage of the large district it serves, is inadequate to deal with the great and sudden increase from the high levels in time of heavy rain, and this has become more apparent recently owing to the very large developments in building and the laying out of new streets in the district for which the sewer is the outfall. The city engineer has considered the present and probable future requirements of the district and made the necessary calculations, and on his recommendations the committee propose that a new sewer should be constructed at once at an estimated cost of 20,000*l.*

THE general works and highways committee of Nottingham Corporation state in their annual report that the expenditure on public works during the year had been 52,745*l.* 9*s.* 7*d.* The buildings passed numbered 1,600, compared with 1,531 the year before; 102,435 streets had been swept, from which 33,351 loads of refuse had been removed, and the total mileage of streets scavenged was 13,600, or an average daily length of 37.36 miles. The average of men employed on this work was 58.38 per day. Street watering was necessary on 125 days; 42,937 streets were watered, on which 28,683 loads of water were distributed; 1,045 sewers had been flushed, cleansed and repaired. Repairs to the paving had been done in 261 streets; the macadam roadways had been repaired on 48 roads; the steam rollers had been used on 30 streets, and footways were repaired in 304 streets.

A NEW thing in Canada, says the *Manchester Guardian*, is cumbrously called the "Cost-plus-a-fixed-sum system" of contracting for public and other constructional works. A limited company has been formed which will transact business on no other footing. The contractor's reward is a pre-determined fee, which is payable in excess of the net cost. Theoretically there is something to be said in favour of thus abolishing an antagonism of interest between the contracting parties. It becomes the contractor's business to earn his fee with the greatest credit to himself for economy and expedition in working. And he has no incentive to inflate the cost, as he might have in working upon a commission basis. It remains to be seen whether there is a large body of customers disposed to forego the right to determine the total cost and whether the apparent advantages outweigh those arising from the desire of a lump-sum contractor to make the best of his bargain. Under either system a measure of mutual confidence is requisite, and that invented by Mr. Frank P. Gilbreth certainly demands no less than is called for by common practice.

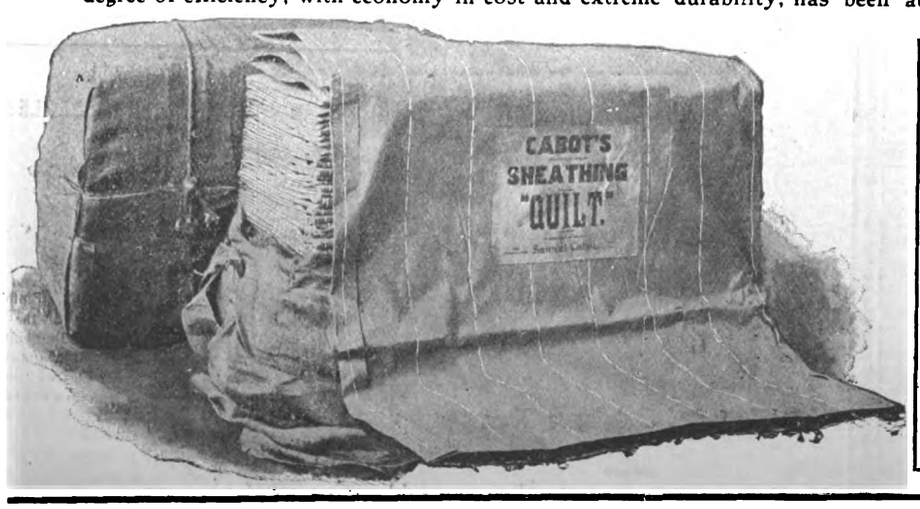
AN English architect who has established himself in the United States, in writing a letter about the disaster at San Francisco, says:—There are thousands of thousands of business men here who are setting their teeth firm, determined to build up San Francisco or die in the attempt. Of course there will be considerable work in reconstruction, but it has been estimated by a competent contractor that, if the rubbish and débris had to be removed in the regular way by teams, it would take five years to clear the city. Railroads are being laid along the streets and across the city, and it is the intention to remove the rubbish by train-load. With regard to new structures, the correspondent thinks little will be done in the near future. He adds:—Imagine the street car lines in places like the waves of the sea (the streets in places have sunk about 7 feet); pavements and kerbs pushed up, down and in and out in all directions, immense steel columns and beams simply a tangled mass, twisted and bent, not in one building, or a dozen, but in scores. The burned district represents an area equal to 4 square miles, or, to put it in another way, 450 blocks.

THE new high-level railway bridge over the river Tyne will be opened for the North-Eastern railway in a month or two. The steel bridge has four spans supported by granite piers. The total length of the main bridge is 1,150 feet, and the weight of steel in each of the spans is:—North, 950 tons; two central spans, 3,482 tons; and southern spans, 1,350 tons The three central piers supporting the girders are built of grey granite procured from Norway, and in the north and south river piers about 135,000 cubic feet of granite was utilised and some 195,000 cubic feet of granite in the centre pier, the granite in the first-named commencing at low-water level, whilst in the centre pier it starts 28 feet below low-water mark. The extreme width of the three piers is 103 feet 6 inches at cut-water, the cut-water at each end being 17 feet 6 inches, and the main pier at high water level 68 feet 6 inches. The foundations of the river piers have been taken down to the same depth, namely, 69 feet below high-water, and they have been built on caissons. Mr. Charles A. Harrison, chief engineer of the northern division of the North-Eastern railway, prepared the designs.

MARINE ARCHITECTURE.

THE Royal Mail Steam Packet Company is to be complimented on the fine addition to its fleet, engaged in the South American trade, of the twin-screw steamer *Amazon*, which sailed on her maiden voyage from Southampton to Brazil and River Plate on the 15th inst. Her dimensions are:—Length, 527 feet 6 inches, and beam, 60 feet, with a gross register of about 10,000 tons. The vessel is designed to carry a large quantity of cargo, but passenger accommodation on the most sumptuous scale is her specialty, and the fact that the state-rooms are on deck will appeal strongly to intending voyagers. There are a number of *suites de luxe*, and they are magnificently furnished. The first saloon is very handsome, and the tables—seating 210 passengers—are arranged on the latest restaurant system.

The elegance of the whole structure, combined with the magnificent stairway and approach to the main deck, forms a fine example of marine architectural beauty. The style is Renaissance—in oak, white and gold furnishings, adorned with cupids and sea trophies. The dome, modelled after that of the Genoese palace, is most ornate and brilliantly lighted, while the saloon is specially ventilated by a very complete arrangement of electric fans. The decorations of the social hall, situate on the promenade deck, are in oak, the structure being surmounted by a dome of stained glass. The smoke-rooms are also well ventilated with electric fans and decorated with Dutch tiles giving excellent views of the different places of interest in the ports and countries to which the company's vessels trade, the woodwork being in oak panelling handsomely carved. The second saloon accommodation includes handsome dining saloon, also social hall and smoke-room on deck.



By the adoption of Messrs. Harland & Wolff's latest "balanced" quadruple type of engines vibration is reduced to a minimum, and the double set of engines for the twin screws constitute an additional element of safety.

THE Garden City Company of New York City will receive competitive designs for suburban houses of moderate cost until August 1, 1906. The following prizes are offered:—Two of 1,000 dols., two of 500 dols., and ten of 100 dols.

CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.
KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

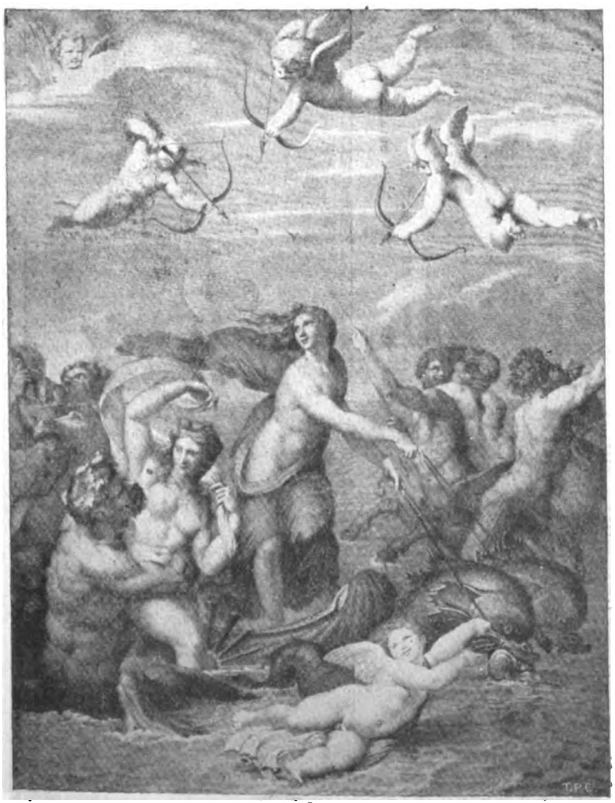
Art Plates from "The Architect."

AWARDED GOLD MEDALS, INTERNATIONAL HEALTH EXHIBITION AND ARCHITECTURAL AND BUILDING TRADES EXHIBITION (1889).

PROOFS on PLATE PAPER of the following Illustrations which have appeared in "THE ARCHITECT" can now be obtained in a separate form on proof paper suitable for framing.



***The Corn Field.*—(1) Ploughing; (2) Harrowing; (3) Mowing; (4) Carting; (5) The Products of the Corn Field.**

In Five Separate Plates. Total Length, 14 ft. 7 in. by 15 in. deep. A splendid example of Colour Work in Permanent Ink Photo. By M. PAUL ALBERT BAUDOIN. This magnificent Illustration was presented to the Subscribers to "THE ARCHITECT," in 1886. A few proofs were taken which immediately became out of print.

OPINIONS OF THE PRESS.—"We are not surprised to hear that there has been a great demand for the beautiful reproductions of the well-known frieze by M. Paul Albert Baudoin, entitled 'The Corn Field.' The plates have been reproduced by subscription at half a guinea the set, and so great has been their success that a second edition has been issued."—*The Lady's Pictorial.* "They are beautifully done in colours by the permanent ink-photo process and form a very artistic and pleasing set at the extremely moderate price of half a guinea."—*The Stage.* "The well-known frieze entitled 'The Corn Field,' which is a splendid example of colour work in permanent ink photo by M. Paul Albert Baudoin, is to be reproduced by subscription of half a guinea a set. They are exceedingly artistic and would grace the walls of any house."—*The Gentlewoman.* AND NUMEROUS OTHERS.

In consequence of the almost daily demand for these Plates they have been reproduced by Subscription at Half a Guinea the Set, free by post, carefully packed inside patent roller, and are now ready for issuing. Immediate application is requested. May be had framed in Black Reeded Frame with Gold Mounts, price Three Guineas the Set of Five Pieces.

Architects, Contractors, and others are recommended to journey by the

GREAT CENTRAL RAILWAY.

They will find it

RAPID TRAVEL IN LUXURY.

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system.

Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains *via* Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 30 per cent. off ordinary fares.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 P.M. *on Thursdays.*

COMPETITIONS OPEN.

TRADE NOTES.

FOR the fourth year in succession R. Waygood & Co. have declared a dividend of 9 per cent.

MESSRS. ASHWELL & NESBIT, heating engineers, of Leicester, have carried out the heating of the new Council schools at Wisbey.

THE new hospital, Duntocher, is being warmed and ventilated by means of Shorland's patent Manchester grates, the same being supplied by Messrs. E. H. Shorland & Brother, of Manchester.

THE contract for the heating of Long Clawson parish church, Melton Mowbray, has been awarded to Messrs. Sheen & Wells, heating engineers, Sheffield.

A LARGE chiming clock is to be placed in the tower of the church at Irthlingborough, Northamptonshire, which will show time on two dials. It is to be fitted with all the latest improvements, and will be generally made to the designs of the late Lord Grimthorpe. The cost will be 154*l.*, and the work is being done by Messrs. John Smith & Sons, Midland Clock Works, Derby.

MESSRS. CALLOW, WRIGHT & HEWLETT are introducing to the market yet another system of opal wall tiling. The patent, which is known as "The Shark," owing to the form of the backing, has distinct advantages. As is well known, a great deal of trouble and expense has been caused from time to time by the fact of the backing being ineffective. This is undoubtedly obviated in this system, and as the material used is practically of the nature of a damp-course the discolouration of the tile is impossible.

NEW CATALOGUES.

WE have received from Messrs. The Richardson Electrical Company, Ltd., of 16 Dorset Street, Baker Street, W., their new catalogue of electric-light fittings.

MESSRS. RICHARD JOHNSON, CLAPHAM & MORRIS, LTD., of Manchester, have sent us their new catalogue showing the applications of Johnson's concrete lattice and armoured concrete construction.

MESSRS. JOHN HENDERSON & SON, Ltd., of Glasgow, have brought out two pamphlets relating to artesian wells and water supply, with some interesting particulars relating to well-boring.

MESSRS. PARNALL & SONS, of Bristol, forward us two coloured views of shop fronts recently carried out by them, produced in the three-colour process.

BUILDING AND BUILDERS.

PLANS are being prepared by Mr. A. P. Fielder, architect, London Wall, E.C., for a new theatre at Twickenham.

THE London County Council on Tuesday approved of the recommendation to increase the accommodation in schools by 20,314 places, involving an outlay, including sites, of 622,000*l.*

IT was reported to the Board on Tuesday that the works at the new Manchester Infirmary were progressing. Railways were being laid down for trolleys. The builders expect to have eight pavilions soon in hand; 300 tons of stone have been delivered, and 100,000 bricks per week were on order.

IT was agreed at the last meeting of the Essex education committee that in connection with the enlargement of schools and the erection of new ones, Mr. Whitmore, the committee's architect, should be paid the usual architect's commission.

THE Rochford (Essex) education committee decided at their meeting on Wednesday last to invite tenders for the erection of a new school at Eastwood to accommodate 160 mixed and 40 infant scholars, and to appoint a clerk of works at a salary of 3*l.* 3*s.* per week, to be increased to 3*l.* 10*s.* if the supervision of the new infants' schools at Sutton, Thundersley and Leigh were undertaken, the plans for which were passed at the same meeting.

IN the Probate Court last week, Mr. Justice Bargrave Deane heard a case arising out of the testamentary dispositions of the late Mr. Joseph Gornall, builder and contractor, Bolton, who died on September 23, 1905, leaving property to the amount of 20,000*l.* Evidence was given to show that the testator was in his right mind at the time he made his will. Counsel consulted and arranged that the will should be admitted to probate.

A JOINER was engaged at work on the new municipal school in Plymouth Grove, Manchester, when the scaffold on which he was gave way. He was precipitated to the ground and removed to the Royal Infirmary, where he died four days later. It was stated at the inquest that the scaffolding was not arranged properly, and one witness told the coroner that part of the platform of it was rickety and unsafe, one end being insecure. M'Donald erected the scaffolding himself. The coroner said apparently no one was to blame but the man himself, who has thus paid dearly for his carelessness in fitting up the scaffolding. A verdict of accidental death was returned.

THE Sheffield and District Building Trades' Federation have informed the Town Council of their wish to send a deputation to visit the various housing schemes in operation under the Corporation, such deputation to report on the general utility of the cottages from a working-man's standpoint. They have also inquired whether a firm which has obtained a printing contract signed the fair contract clause, and protested against the proposed grant from the rates for the purpose of subsidising a sick and dividend society.

AT Partick Dean of Guild Court an application for lining to erect a self-contained villa in Albion Street was considered. It was stated in connection with the application that the back space required by the 1903 Act at the rear of the building must be in width equal to the height of the back wall from the ground level to the eaves. The petitioner pointed out that under another section of the Act, if in the opinion of the Court the ground was not likely to be built on the Court had discretionary power to grant the lining. The magistrates, however, said they would require a proper guarantee that this would apply in this particular case, and so they continued the application for a week.

THE Glasgow Corporation at their last meeting considered a report by a special joint committee into the disastrous fire in the Watson Street home on November 19. The committee expressed the opinion that the cubicles, being made of unprotected wood, materially contributed to the extent of the fire, and that the wooden lining of the ceilings and walls was most undesirable. This view has been rejected by the Council. The committee made a number of recommendations of precautionary measures to be taken to avert any possible recurrence of such a catastrophe. Among them was the following, "That every lodging-house or hotel containing sleeping accommodation for more than 100 persons shall be provided with at least two adequate means of exit to the street, to the satisfaction of the master of works and the chief officer of the fire brigade." This clause also was deleted by the Council.

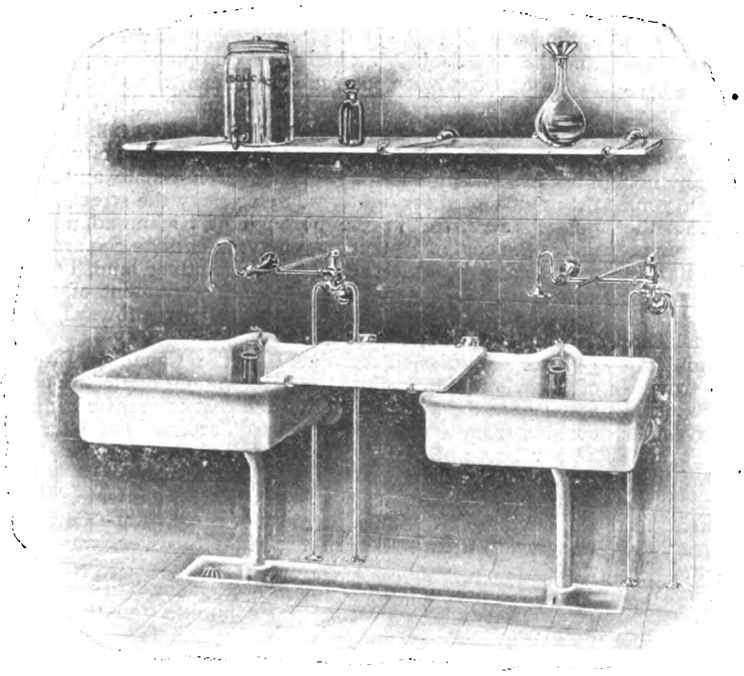
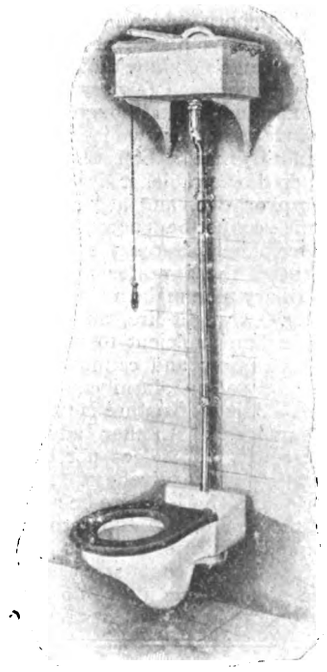
ARTISTIC WOODWORK.

WE have before now referred to the excellent work produced by Goodalls, of Manchester. Craftsmanship, of late, is supposed to refer to objects that are portable. Nevertheless, there is a craftsmanship of a higher kind which can only be produced on a large scale and requires not merely delicate manipulation, but boldness of treatment and skilful organisation. This is what Goodalls can supply. Their work will stand comparison with any found in Elizabethan or Jacobean mansions. We are not afraid to add that they could rival fine Italian work. Their woodwork is not confined to Lancashire. In London they have executed the joinerywork and fittings in the new Savoy Hotel extensions. Their woodwork is also in evidence at the Ritz Hotel, Carr's Restaurant, and the whole of the fronts and interior woodwork in Carr's building. The interior and exterior joinerywork, mainly in oak, at Messrs. Duveen's new premises in Bond Street is to be credited to the firm, and the elegant work, of which we give an illustration of a small portion, at Messrs. Speaight's new galleries in Bond Street, of which Mr. C. H. B. Quennell was the architect. In the presence of such examples further commendations of the work of Messrs. Goodall, Lamb & Heighway is unnecessary. They have nearly completed their work in the Grinling Gibbons style at the Belfast Town Hall.

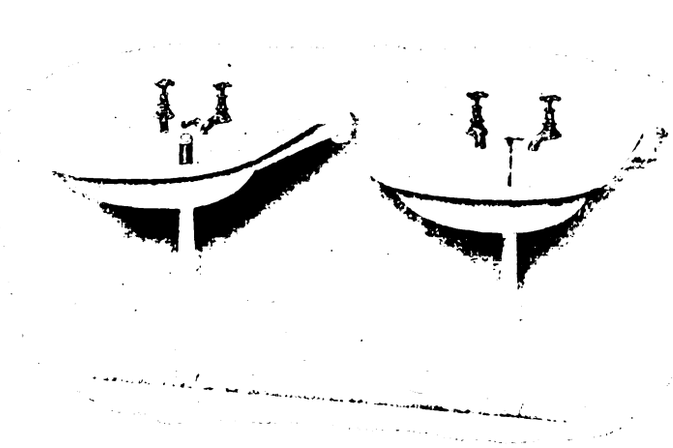
MARPEDO.

UNDER the title of "Marpedo" a water paint has been manufactured by Messrs. J. H. Fuller & Co., Ltd., which can be obtained in paste or in dry powder. The paste, especially when mixed with Keene's cement, has the advantage of filling cracks and holes, and is applicable to porous surfaces. The dry powder requires simply to be mixed with cold water and is adapted for ordinary purposes. A 7-lb. tin will cover about 70 square yards. As it is compounded on an antiseptic base, Marpedo has sanitary advantages. The number of tones of colour is remarkable and all have a softness which is refreshing. Messrs. Fuller also manufacture a damp-proof enamel, a petrifying liquid, enamel paints, varnish stains and other aids for beautifying and preserving walls and woodwork.





MESSRS. SPEAIGHT'S NEW PHOTOGRAPHIC SALON. *(C. H. B. Quennell, Architect.)*



Digitized by Google

THE KING EDWARD VII. SANATORIUM.

THE new sanatorium at Midhurst may be considered as a great experiment, of which the effects will be watched wherever sanitary science is recognised. As in all hospitals, the sanitary appliances must exercise an influence upon the patients. There are invisible enemies to be guarded against, and care must therefore be taken in affording as little space as possible for their shelter, and to employ materials which are impervious. The wide experience of Messrs. Doulton & Co. has enabled them to comply with the most exacting conditions. In the operating room the sink, which is of strong fireclay, is white glazed inside and out, and is fixed on vitreous enamelled cast-iron cantilevers which stand clear of the walls. A marmorite slab is also supported by similar cantilevers, and in that way nooks and corners for bacteria are avoided, and there are special fittings which are very light but efficient. The closets are also kept clear of the floor in order that all exterior parts may be cleansed. Glazed ware alone is exposed, and, should occasion require it, closets can be changed without interfering with the wall surface. The three-gallon flushing cisterns are of white vitreous enamel inside and out, and are supported on special brackets. The patients' baths are of fireclay within and without, and have the advantage of a patent mixing valve, so arranged that hot water cannot possibly be turned on first. The occasional accidents which arise from oversight of attendants are therefore avoided. In order also to prevent accidents, rounded edges are employed wherever possible. All this foresight is commendable, and will add much to the comfort

of the patients. The forms adopted, we need not say, are satisfactory, and the Midhurst sanatorium is a further evidence of that combination of science with art which has gained so wide a reputation for Messrs. Doulton & Co. and their potteries.

A NEW FIRE-ALARM.

EVERYONE who has a barometer or a thermometer is aware of the sensitiveness of mercury. The least deviation means motion, and motion always produces force. In the Leslie-Walker fire-detector advantage is taken of this quality in mercury to set in action electric wires which act on gongs of different power. The result is so surprising there is no doubt that at one time the phenomenon would be ascribed to magic. In the office of the company in Gamage's building, Holborn, which is rather above the average height, the apparatus is placed at the ceiling level, and which in all cases can be done without any detriment to the appearance of the room. A few scraps of paper are lighted in a cage on the floor, and although the flame does not exist for more than a second or two it is sufficient to affect the mercury and to cause a bell to ring. If louder sounds are considered desirable, it is only necessary to burn another scrap or two, and a second warning is given by a gong which cannot be ignored. There is no exaggeration in the description. Mercury must expand, and by the arrangement of the inventor platinum wires connected with an auxiliary tube make a circuit which operates on the bell and gong. A slight fire, such as one in a muslin curtain, is more than sufficient to set the apparatus in action. The parts are few and cannot easily get out of order, and the certainty of an alarm can be compared to that of gravitation. A law of nature is turned to account with the usual advantages. Another advantage of the Leslie-Walker detector is that it does not become a source of annoyance through its sensitiveness. Normal conditions of heat cause no sound, but let there be any variation and then it will not be the fault of the apparatus if a fire is not extinguished immediately after it bursts forth. Sir William Ramsey, the professor of chemistry, has declared that "it may be accepted as certain that no better indicator of fire is likely to be produced." Sir Hiram Maxim, who experimented with it in his own laboratory, testifies to its advantage over all other systems, and those who have been saved from fire through its efficacy have confirmed those statements.

ELECTRIC NOTES.

GREENOCK Corporation have decided to increase the electrical engineer's salary from 350*l.* to 450*l.* by twenty votes to five.

THE Electrical Contractors' Association of the United Kingdom held their annual meeting on the 16th inst. at Leeds. Mr. Thomas Wright, of Glasgow, the newly-elected president, was in the chair. Mr. H. Marryat was appointed treasurer and Mr. Leonard J. Tate, of London hon. secretary.

THE British Commercial Agent in Russia reports, on the authority of the official *Commercial and Industrial Gazette*, that the American Westinghouse Company has purchased in Moscow for 4,000,000 roubles the enormous works of the Central Electrical Company for the construction of dynamo engines, costing the latter company 6,000,000 roubles.

THE commission on electric lighting for the city of New York has presented to the Board of Estimate and Apportionment a plan for lighting by electricity the streets, parks, public places, &c., in the borough of Richmond, and estimates the cost of a plant complete to supply 2,000 arc lamps and 20,000 incandescent lamps, including land, building, power-house of 3,000 kw. capacity, equipment of power-house of 2,000 kw., cables, transformers, subways, poles, fixtures, &c., at 1,161,000 dollars.

THE commission appointed by the Canadian Province of Ontario to inquire into the development of electric power at Niagara Falls estimates that the cost of transmitting the current from a distance equal to Toronto would be only 1*l.* per horse-power per year, plus 1*l.* 12*s.* for the cost of development, as compared with 5*l.* to 6*l.* with coal. "This," comments the American Department of Commerce, "is the explanation of the unwillingness of some of the Canadians to agree to a limitation of the right to divert water from the Falls."

MR. HARPUR, the Cardiff city engineer, has prepared a report for the Cardiff lighting committee on the cost of

street lighting by incandescent gas and electricity. The figures show a great advantage in favour of gas. He says :—"The new 14 candle-power gas will reduce the lighting power of flat-flame burners to such an extent as will make it incumbent to abandon this class of light in the future. I am, however, informed that at least equally good results can be obtained from an equal quantity of gas by the use of incandescent burners with 14 candle-power gas as with the 16 candle-power. The matter, therefore, resolves itself into the question of whether it will be advisable to light the city by means of incandescent burners or electric light."

MESSRS. KELSO & Co., electricians and model makers, Glasgow, have received an order for all the apparatus for an experimental tank, which is to be constructed at the works of a leading Japanese shipbuilding firm. The new tank will have a waterway about 445 feet in length, of which 400 feet is deep, varying from 9 feet at one end to 10 feet at the other. The breadth will be uniformly about 20 feet. The apparatus will be worked by electricity.

VARIETIES.

THE Corporation of Deal have decided to purchase the marine gardens at a cost of 6,000*l.*

A NEW school for the education committee is about to be erected at Springfield, Essex.

THE West Thurrock and the Purfleet schools, Essex, are both to be enlarged, and the plans were passed last Monday.

MESSRS. JOHN BURNET & SONS, 239 St. Vincent Street, Glasgow, are the architects for new stores to be erected in Princes Street, Edinburgh.

THE opening of the new Parade at Bridlington will take place on Saturday, July 7. Very extensive works have been carried out at a cost of 40,000*l.*

THE Borough of East Ham has received the sanction of the Local Government Board to borrow 14,192*l.* for electric-lighting purposes and 7,370*l.* for private street improvements.

THE Mersey Docks and Harbour Board have accepted the tender of Mr. John Scott, of Darlington, for the construction of a dock with sheds, &c., complete, on the site of Vittoria Wharf, Birkenhead.

ON Wednesday last the foundation-stone of the secondary school for girls to be erected at Chelmsford was laid by Mr. E. N. Buxton, J.P., the chairman of the Essex education committee. The total cost will be 9,400*l.* It is hoped to have the schools open early in January next.

THE oratorio "Judas Maccabæus" will be performed for the first time in its entirety on the last day of the Handel Festival at the Crystal Palace, to-morrow afternoon. It was composed to celebrate the victory at Culloden in 1746, and contains some of the finest choruses Handel ever wrote.

THE Labour Department of the Board of Trade reports that employment in May showed little change from the conditions of the previous month. In the engineering, tin-plate, building and textile trades generally there was some improvement.

THE members of the Institute of Sanitary Engineers are holding their summer meeting this year in Manchester, on July 6, 7 and 8. Sir Wm. Mather, M.I.C.E., will preside at the meeting, and a very interesting programme of discussions and visits has been arranged.

THE late Mr. Francis William Webb, formerly chief mechanical engineer of the London and North-Western Railway Company, has bequeathed to the Manchester University the sum of 2,000*l.* for the purpose of establishing an annual scholarship for the benefit of employés and sons of employés of the London and North-Western Railway Company. The scholarship will be tenable at the University, and will be awarded for proficiency in engineering and subjects connected with railway work.

THE committee in connection with the proposed Scottish National Exhibition, Edinburgh, 1908, report that the response to the circular issued a few days previously requesting subscriptions to the guarantee fund was extremely satisfactory, several of the former guarantors having doubled their subscriptions. With the view of having the appointment of the Executive Council made as soon as possible, it was agreed to urge subscribers to the fund to intimate without delay their subscriptions to the minimum fund of 25,000*l.*

"Eternit" (Asbestos-Cement) Slates & Tiles

Smooth on both sides.

THE Dublin Corporation have adopted a report of the improvements committee, which notified the receipt of plans and estimates amounting to 52,000*l.*, for the completion of Clontarf main drainage and asking the authority of the Council to apply to the Local Government Board for the necessary loan. The improvements committee were instructed on the receipt of the tenders already invited, but before opening same, to invite tenders for the alternative scheme on the sea side of the wall, tenders for both schemes to be opened at the same time.

AT the last meeting of the Court of Common Council, the following resolution was moved by Mr. W. H. Williamson :—That, having regard to recent legal decisions on the question of sewage pollution, this Court is of opinion that the time has arrived when a conference of the various authorities interested in the subject of the purification of the estuary of the river Thames and elsewhere should be convened, for the purpose of considering the existing situation, and with a view to taking such further action as may be deemed necessary in the interest of the public health, and that it be referred to the Port of London sanitary committee to arrange and hold such conference accordingly.

MAJOR C. E. NORTON, R.E., while holding an inquiry at Wallasey into an application to borrow 700*l.* for street widening works, which it was proposed to carry out by the Council's own workmen, said the Local Government Board had recently decided not to sanction any payments for work done by Councils' own staffs out of loans, as it meant charging to capital what ought to be charged to revenue. The Chairman of the works committee said that would mean discharging some of their workmen, and it was rather an arbitrary proceeding on the part of the Board. In Wallasey they had laid down all their tramways with their own workmen and they made the riverside promenade in the same way. Eventually the Council's surveyor said the work would be done by contract.

MESSRS. GILBERT & CONSTANDUROS, architects for the new building to be erected on the site now occupied by Harcourt House, have published the following statement :—"In consequence of the inconvenience caused by the absurd statements appearing in the London Press as to the discovery of an 'underground passage' at Harcourt House, we have been compelled to prohibit anyone from going on the premises excepting the workmen engaged in pulling down the old buildings. The 'underground passage' is merely the coal-cellar of the mansion, and the unauthorised and ridiculous statements as to its being a 'secret passage' have caused all engaged on the new buildings a great deal of unnecessary trouble and inconvenience by letters and interviews on the subject."

MR. A. E. ADAMS, borough surveyor of Chippenham, has been appointed by the Melksham Urban District Council to report on the accounts in connection with the new sewage disposal scheme, so that the Council may apply to the Local Government Board for a further loan. The loan sanctioned by the Board was 11,000*l.*, but this has been expended, as well as another 1,000*l.* borrowed from the bank. The Council has to pay the further 3,000*l.* to the contractor, as agreed upon at the court at Bristol recently, and it is expected that another 3,000*l.* will be required to complete the works. In addition there are the law costs of the recent proceedings, which exceed 1,000*l.* The Council has nearly reached the statutory limits of its borrowing powers. It is expected that special Parliamentary sanction will have to be obtained to borrow money beyond the statutory limit.

THE water committee of the Manchester Corporation will recommend the Council at its next meeting to provide for the making of another, or third, conduit from Thirlmere to the city. The work will not be completed until the lapse of about seven years. The two conduits already made convey some 20,000,000 gallons daily. This is in addition to the supply from Longdendale. The third conduit will bring another 10,000,000 gallons daily, so that 30,000,000 gallons will be brought altogether. The Thirlmere scheme was commenced in 1885. The construction of the first part of the work cost in round figures 2,800,000*l.* It was, of course, the most difficult and expensive part, because of the works and roads made around Thirlmere, and of the provision of room for laying subsequent lines of aqueduct. The second pipe, the laying of which was completed about eighteen months ago, cost 650,000*l.* The third will cost considerably more, owing in part to the rise in the price of iron pipes. The present conduits carry the water to Prestwich. The third will probably be taken round the city to the reservoirs at Audenshaw. Thirlmere's full capacity is estimated at 50,000,000 gallons a day.

THE PUTNEY HIPPODROME.

THIS building is situated near the High Street, Putney, and has a frontage of 110 feet to Felsham Road, with a depth of 80 feet, while the height will be about 60 feet. The front is of red brick and stone, with an ornamental tower rising to a height of nearly 80 feet at the right-hand corner. The construction is on the cantilever principle, with no intermediate columns to obstruct the view, and is entirely fireproof throughout. The cost is estimated at 23,000*l*. The

Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied. It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

ANTHROL

The result of much practical experiment has shown it to be the **most** efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

The ANTHROL COMPANY, Kinning Park, GLASGOW; and 6 Crosby Square, LONDON.

Digitized by Google

architect is Mr. F. W. Hingston, and the builders are Messrs. Kingerlee & Sons, of Oxford.

CONTRACTORS AND CORPORATE LABOUR.

IT is often asserted by municipal officials that works can be carried out more economically under their supervision than by ordinary contractors. A report by a sub-commitee of the paving committee of the Manchester Corporation reveals that in their city experience does not warrant any belief that contractor's work inflicts a heavier burden on the rate-payers. According to the city surveyor, the average cost per cubic yard of excavation for road formation, carting to tip, &c., is as follows :—(*a*) By Corporation staff, 2*s.* 1.48*d.*; (*b*) by "unemployed" labour, 2*s.* 0.79*d.*; (*c*) by contract, about 1*s.*

The contractor's prices for excavation, &c., include profit establishment charges, the cost of foremen, gangers, watching and lighting, &c. In the works executed without the intervention of a contractor the prices—(*a*) and (*b*)—are exclusive of profit, establishment charges, cost of foremen, gangers, &c., and watching and lighting. With these items included in each case the average cost is as follows :—(*d*) By Corporation staff, 2*s.* 6.82*d.*; (*e*) by "unemployed" labour, 2*s.* 5.29*d.*; (*f*) by contract, about 1*s.*

The special sub-committee say they "have given very careful consideration to the following portions of the statements contained in the city surveyor's report to the improvement, &c., committee which have reference to the work of the paving committee's regular staff, viz. :—

"1. That excavating work carried out by Corporation staff cost more than similar work carried out by the 'unemployed.'

"2. That, 'as a general rule, the work executed by the regular staff is not measured up and the time is not so kept that the actual cost per cubic yard of excavation, carting to tip, &c., can be accurately ascertained.'

"3. That the cost of excavating work carried out by the regular staff averages 156·83 per cent. more than contract work.

"After careful investigation, the special sub-committee are not able to accept the comparisons made in the report as being fair, and they consider that the deductions which may be drawn from them would be incorrect and misleading, and tend to cast an unwarranted reflection on the paving committee and their staff."

The special committee endeavour to explain that difference by saying :—In comparing work carried out by the paving committee's staff with work carried out by contractors, it must be borne in mind that Corporation workmen are employed under better conditions than contractors' men. The Corporation workmen are required to perform their work in an expeditious manner, but quality of workmanship is desired in preference to quantity. Also it may be stated that, in regard to contractors' workmen, as soon as the weather conditions are such that the workmen are not able to get through their work expeditiously the contractor stops them—he will only pay full wages for the full complement of work; but the circumstances of the work carried out by the paving committee's workmen are such that they cannot be so stringently dealt with. Often when the rain is not heavy, or it is only intermittent, they are allowed to work on, and they get full wages for it, although it is clear they cannot do the full complement of work. These are important factors which affect the cost of the various jobs. Also, it must be remembered that the minimum wages paid by the Corporation to the labourers they employ is 25*s.* per week the year round, and as in outdoor work the working hours are necessarily reduced in winter the rate of wages per hour is proportionately increased.

In this way the rates per hour of the wages paid to the paving committee's labourers are as follows :—For thirty-six weeks in summer (fifty-two hours per week), 5.76*d.* per hour; for eight weeks in winter (forty-seven hours per week), 6.38*d.* per hour; for eight weeks in mid-winter (forty-four and a half hours per week), 6.74*d.* per hour; for fifty-two weeks, average 50$\frac{1}{3}$ hours per week, 5·99*d.* per hour.

Compared with these rates, the average rate of wages paid to labourers by contractors is 5*d.* per hour the year round when working. The special sub-committee regret that the paving committee were not given an opportunity of looking over and checking the average costs of labour as arrived at by the city surveyor prior to the printing and issuing of his report.

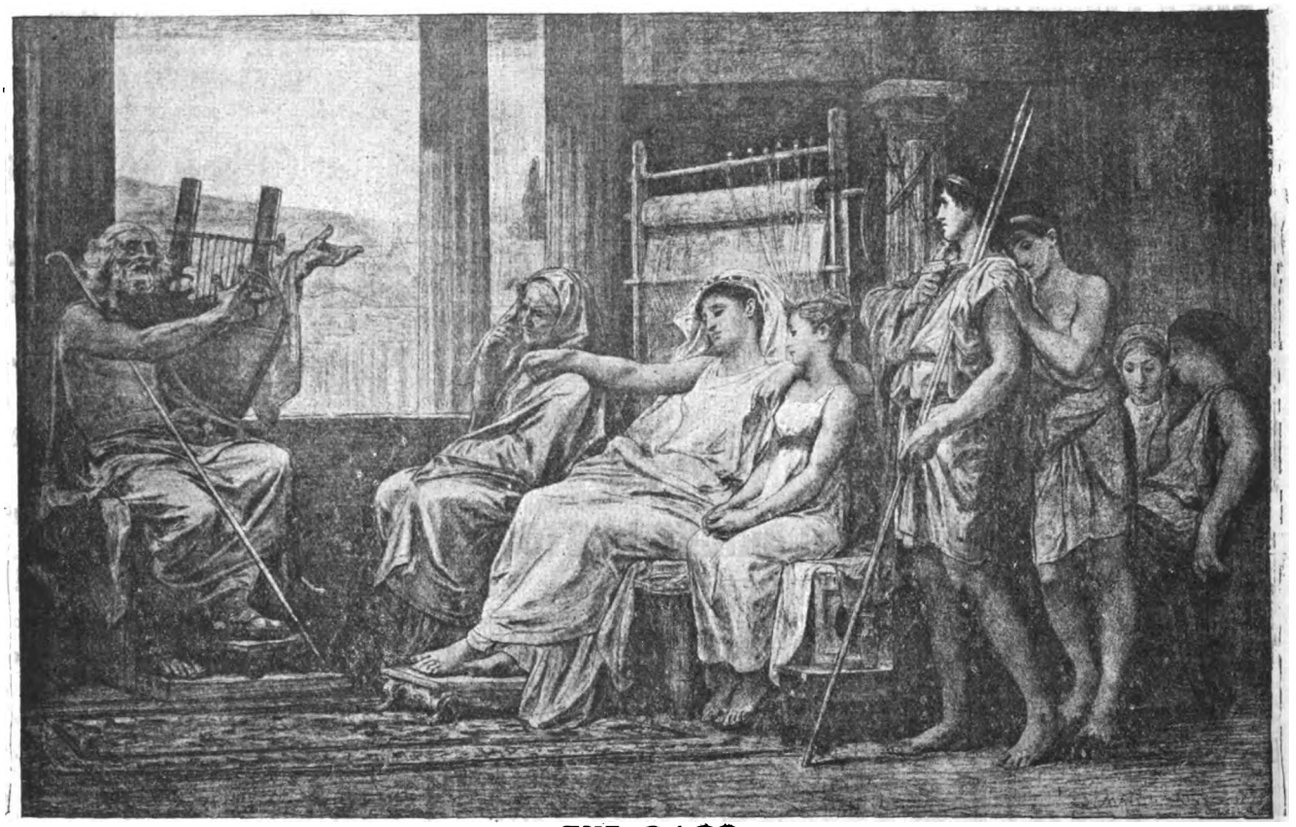
Art Plates from "The Architect."



AWARDED GOLD MEDALS, INTERNATIONAL HEALTH EXHIBITION AND ARCHITECTURAL AND BUILDING TRADES EXHIBITION (1889).

PROOFS on PLATE PAPER of the following Illustrations which have appeared in "THE ARCHITECT" can now be obtained in a separate form on proof paper suitable for framing.

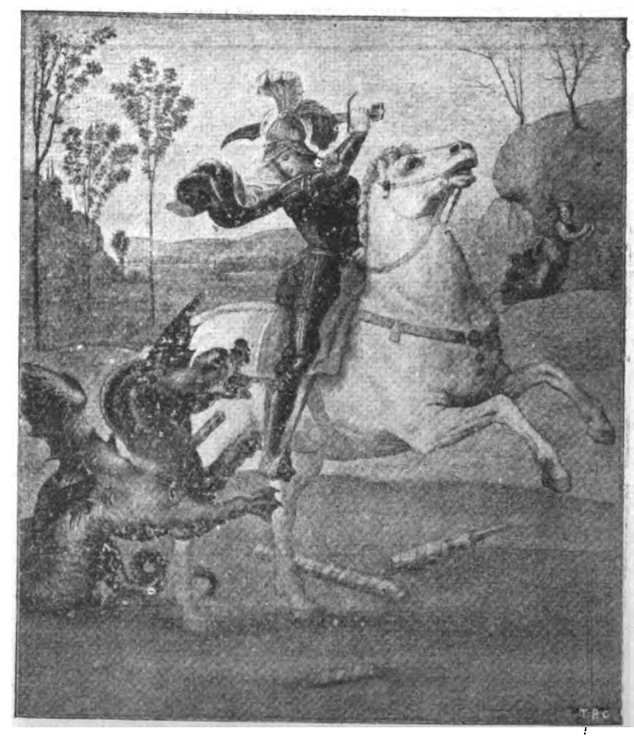
***The Corn Field.*—(1) Ploughing; (2) Harrowing; (3) Mowing; (4) Carting; (5) The Products of the Corn Field.**

In Five Separate Plates. Total Length, 14 ft. 7 in. by 15 in. deep. A splendid example of Colour Work in Permanent Ink Photo. By M. PAUL ALBERT BAUDOIN. This magnificent Illustration was presented to the Subscribers to "THE ARCHITECT," in 1886. A few proofs were taken which immediately became out of print.



OPINIONS OF THE PRESS.—"We are not surprised to hear that there has been a great demand for the beautiful reproductions of the well-known frieze by M. Paul Albert Baudoin, entitled 'The Corn Field.' The plates have been reproduced by subscription at half a guinea the set, and so great has been their success that a second edition has been issued."—*The Lady's Pictorial.* "They are beautifully done in colours by the permanent ink-photo process and form a very artistic and pleasing set at the extremely moderate price of half a guinea."—*The Stage.* "The well-known frieze entitled 'The Corn Field,' which is a splendid example of colour work in permanent ink photo by M. Paul Albert Baudoin, is to be reproduced by subscription of half a guinea a set. They are exceedingly artistic and would grace the walls of any house."—*The Gentlewoman.* AND NUMEROUS OTHERS.

In consequence of the almost daily demand for these Plates they have been reproduced by Subscription at Half a Guinea the Set, free by post, carefully packed inside patent roller, and are now ready for issuing. Immediate application is requested. May be had framed in Black Reeded Frame with Gold Mounts, price Three Guineas the Set of Five Pieces.

Galatea.

From the Painting by RAPHAEL in the Villa Farnesina, Rome. Size 30 in. by 22 in. Price Two Shillings. Free by post, carefully packed inside patent roller.

St. George.

From the Painting by RAPHAEL, in the Louvre. Size 15 in. by 20 in. Price One Shilling and Sixpence. Free by post, carefully packed inside patent roller.

May be obtained from all Newsagents, Booksellers, Messrs. W. H. SMITH & SON'S Bookstalls, or from the

Publisher, P. A. GILBERT WOOD, Imperial Buildings, Ludgate Circus, London, E.C. (*FULL LISTS ON APPLICATION.*)

Printed by SPOTTISWOODE & CO. LTD., at No. 5 New street Square, E.C., and Published for the Proprietors by P. A. GILBERT WOOD at the Office, Imperial Buildings, Ludgate Circus, [illegible] June 29, 1906.
